

SESSION 6 LANDSCAPE PENTAGRAMS - RESULTS

This document details the results of Session 6 of the Newstead Dowsing Research Project that took place in August 2026. The session focussed on the energies of landscape pentagrams and how energy is fed into them via the network of Trees and Capped Vortices. The main highlights are summarised on pages 4 and 5. This is followed by a detailed analysis of the findings. The Appendices contain the data sheets submitted by individual participants.

SESSION 6 LANDSCAPE PENTAGRAMS - RESULTS

OVERVIEW OF PROJECT

Aim of the Project

The aim of this dowsing research project is to explore different aspects of tree, water, and earth energies and to investigate how the different aspects are interconnected, as well as how they are affected by sound-based stimuli, crystals, the Solar Noon transition period (the 20-minute period leading up to Solar Noon), the mid-afternoon transition period (3pm to 3:15pm), the periods surrounding New & Full Moon and the periods surrounding the Equinoxes and Solstices.

A team of Dowzers led by Mave Calvert is working on the ground in the parkland surrounding Newstead Abbey in Nottinghamshire. Other individuals and groups are carrying out parallel research in other locations.

One of the aims of this research project is to investigate Mave Calvert's ideas about these energies and try to prove, disprove and/or revise some of these ideas and hopefully find other interesting things as well.

The project documentation can be found on Mave's dowsingsherwood.com website:

[Research Project \(List\) | The Sherwood Dowser](#)

As well as the Project Summary, projects plans and results documents for each individual themed session, there is a document containing the pendulum dowsing charts, a document containing information about the location, geology and a brief history of the Newstead area, and documents giving opportunities for dowzers to do some remote/map dowsing and monitor some energies in their own home and garden.

Session 6 – Landscape Pentagon Energies

The sixth project session took place in August 2026 and focussed on the energies of Sherwood Forest landscape pentagram, how energy is fed into it via the network of trees and Capped Vortices and how the mid-afternoon transition period may affect human consciousness. The participating Dowzers were:

NEWSTEAD TEAM 8/8/2026

Mave Calvert, Diane Ellerton, Maria Hale, Kate Richardson, Richard Sears

DOWSERS WORKING ELSEWHERE

None as this session is specific to Newstead

SESSION 6 LANDSCAPE PENTAGRAMS - RESULTS

SUMMARY

✦ The variegated sycamore Beacon Tree in the dowsing location at Newstead has multiple energy lines radiating from its trunk at one metre above ground level, some of which connect to other trees to which it has a line of sight and some of which connect over long distances to other Beacon Trees in the area

✦ The lines of energy connecting tree trunks are elliptical in structure similar in shape to a rugby ball standing on its end

✦ The Beacon Tree has growths on its trunk at one metre above ground level where the connecting energy lines radiate from and many of these follow the same path as the roots

✦ The Newstead Beacon Tree broadcasts energy into the local landscape at the end of the Solar Transition period. The radius covered by this broadcast varies from day to day and was shown to be wider on the day of the research (8th August) due to the astronomical Lionsgate Portal which occurs when the fixed star Sirius is once again visible after a period of it having been eclipsed by the Sun.

✦ An oak tree at Newstead around 150 metres from the Beacon Tree serves as the focal point for the south-west tip of the Sherwood Forest pentagram with lines radiating from it connecting to the other tips and the centre of this landscape geometry

✦ The Sherwood Forest landscape pentagram is energised at Newstead during the Solar Noon transition period by energy being sent along connecting tree lines

✦ The flow of energy around the Sherwood landscape pentagram is two-way whilst it is actively being energised, exhibiting two spirals of opposing polarity revolving around the horizontal core of the line causing it to widen.

✦ During the Solar Noon transition period, the whole network of trees at Newstead becomes energised with multiple changes of width and flow direction along them

✦ This energising process can be simulated by singing a tree blessing song or playing a mantra on a mobile phone to one of the trees

✦ The energy received by the pentagram oak from the lines connected to its trunk did not stop at the pentagram oak but rebounded to other trees in the local area

✦ The dowsing results gave substance to the theory that singing, chanting, praying and playing harmonious music in the religious edifices that were built to sacred geometric principles, such as the Priory that once stood at Newstead, would energise the local landscape geometry via the network of local trees

SESSION 6 LANDSCAPE PENTAGRAMS - RESULTS

✦ Richard Sears' dowsing during the eclipse on 12th August suggested that the Sherwood Forest landscape pentagram did not power down at that time but did change in some way

✦ Capped Vortices are often formed by the action of a tree's root system sucking up underground water which creates a vertically rising electromagnetic current with two spirals of opposing polarity.

✦ Capped Vortices often still exist when the physical tree that formed them is no longer present

✦ Capped Vortices are more prolific in certain geologies such as the magnesian limestone that Newstead stands on

✦ In the same way that energy lines radiate from tree trunks at one metre above ground level, similar energy lines can radiate from Capped Vortices. This happens by the vertically rising core of the Capped Vortex being bent by 90 degrees and forming several energy lines at one metre above ground level

✦ During the mid-afternoon transition period both the Capped Vortices and energy lines radiating from them undergo changes in size and speed, disappearing completely for part of the time

✦ Informational (mental) dowsing where questions are asked of the dowsing tools to obtain information, often with a yes or no answer, is proving to be less accurate than vibrational dowsing where the dowsing tool or hand is used to locate and feel the position of an energy field. It is therefore recommended that Dowzers end informational dowsing sessions by checking the accuracy of their results and any conclusions drawn.

SESSION 6 LANDSCAPE PENTAGRAMS - RESULTS

DETAILED FINDINGS

Part 1 – The Beacon Tree

The Beacon Tree closest to Newstead Abbey is a variegated sycamore standing in the car park with wooden bollards around it.

The aim of this part was to do some informational (mental) dowsing to try and ascertain the size of the Beacon Tree's energy field both above and below ground at various times and to do some vibrational dowsing to find out how many lines of energy radiate from its trunk connecting to other local trees.

It was noticed that there are many bumps on the tree's trunk forming a circle approximately one metre above ground level where the lines connect. Also, the visible roots radiating from the tree at ground level seemed to be in the same places as these lines of energy which could mean they are associated in some way with the root network.

SESSION 6 LANDSCAPE PENTAGRAMS - RESULTS

Informational Dowsing

How many tree heights above ground is the energy field of the Beacon Tree?

Diane	3
Kate	30 tree heights above
Maria	100

How many tree heights below ground is the energy field of the Beacon Tree?

Diane	2.5
Kate	60 tree heights below
Maria	20 (10 two weeks ago)

What is the average radius in miles of the overground area that this Beacon Tree broadcasts energy over during the Solar Noon transition period?

Diane	5
Kate	14 miles
Maria	14 miles (10 miles two weeks ago – today is the Lionsgate Portal, see page 12 for more information about the Lionsgate Portal)

How deep underground in tree heights do the energies broadcast by this Beacon Tree go during the Solar Noon transition period?

Diane	150 (125 to 150)
Kate	25 tree heights below
Maria	14

How high into the atmosphere in tree heights do the energies broadcast by this Beacon Tree go during the Solar Noon transition period?

Diane	More than 5,000 tree heights
Kate	618 tree heights above
Maria	100

Vibrational Dowsing

How many straight lines of energy emanate from the Beacon Tree's trunk at approximately one metre above ground level?

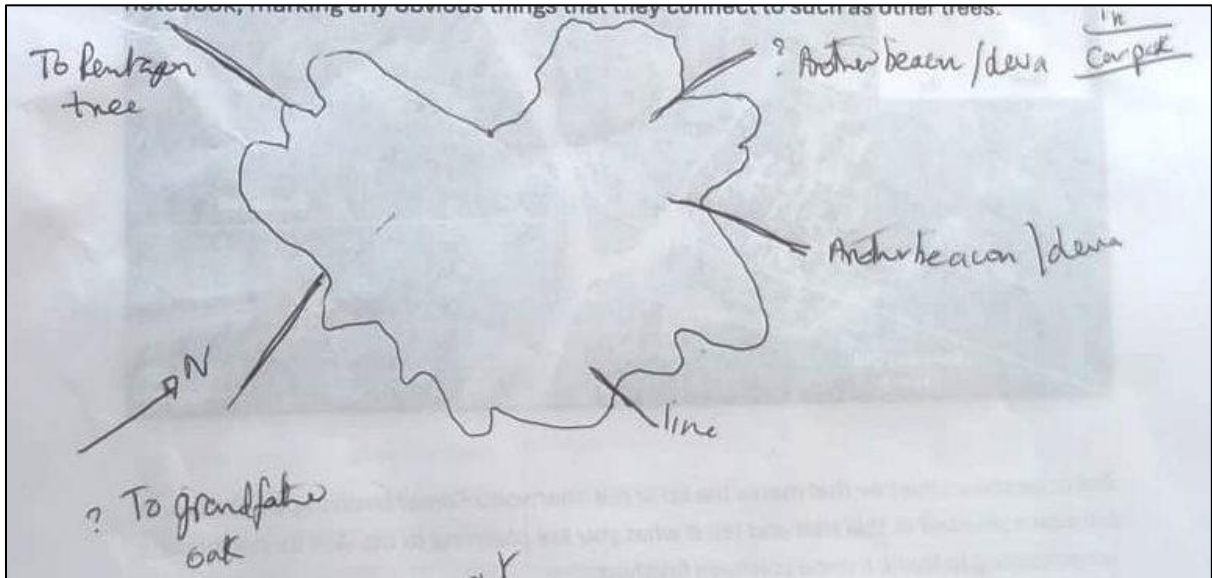

Diane	5
Kate	5
Maria	5

Richard demonstrated how he dowsed the lines connected to the Beacon Tree with his pendulum showing how they were a more elliptical shape like the middle of a vesica piscis rather than circular, being around one metre in height and half a metre in width, similar to the image here.

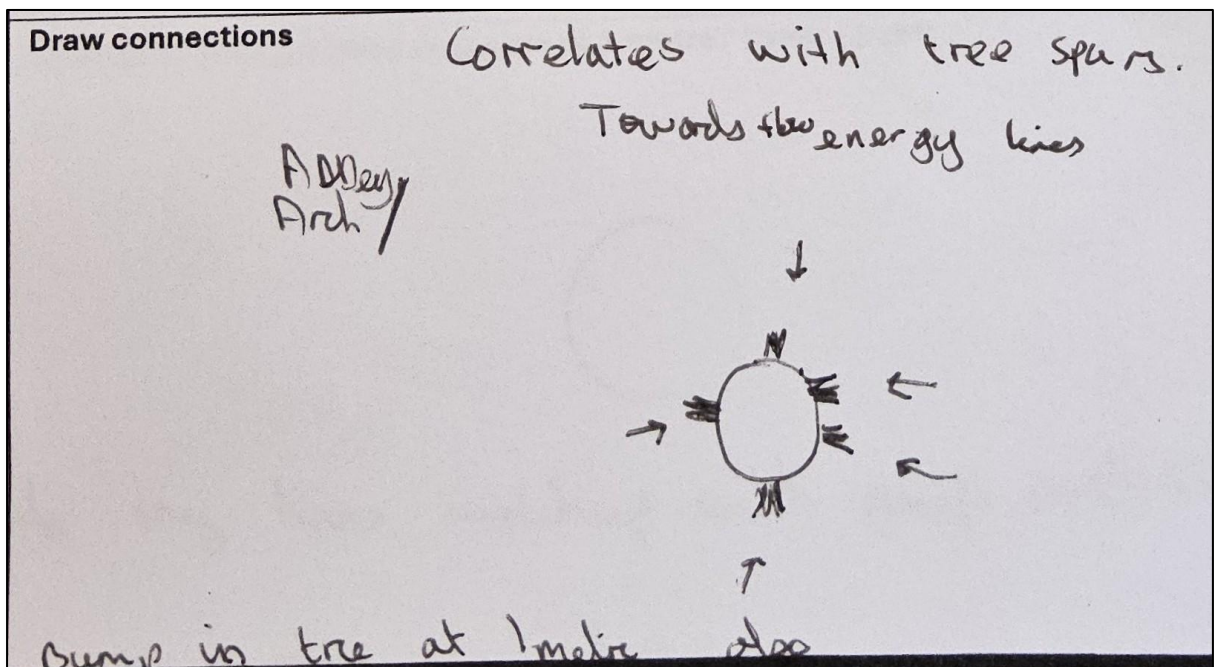

SESSION 6 LANDSCAPE PENTAGRAMS - RESULTS

Kate drew the diagram below to show where the lines connected with the Beacon Tree, She used informational dowsing to ascertain that that two of them connected to other Beacon trees, one to the pentagram tree and one in the direction of Grandfather Oak. Note: after analysing the data from the Solar Noon period and doing some remote viewing, Mave now believes there is a Capped Vortex with splitting energy lines on the line between the Beacon Tree and Grandfather Oak.

Maria drew a similar diagram showing all the energy flowing towards the tree around 11:25am:

SESSION 6 LANDSCAPE PENTAGRAMS - RESULTS

Maria noted that the aura of the Beacon Tree was 14 of her steps away from the trunk (around 3.5 metres) and had 5 bands rising to 1 metre high. Richard also finds that trees can have 5 concentric bands in their auras.

Mave felt the energy of these bands with her hands and said it appeared to go up in small steps a bit like the steps to a monument such as Boatswain's Tomb at Newstead (right).

Maria felt this energy was some sort of protection for the tree, perhaps from small animals who would otherwise eat the bark, while Diane felt it maybe had a spiritual purpose.

Richard noted that the Beacon Tree had 7 chakras above ground. This is consistent with the pure light energies of Mave's Beacon Tree at home.

Analysis of Results

The results using informational dowsing varied quite significantly, although Kate and Maria both got 14 miles as the Beacon Tree's broadcast radius, which may indicate that this particular reading was an important point for us to take note of – see notes about the Lionsgate Portal below.

We noted in session 5 that the Dowser's beliefs and understandings as well as the way a dowsing question is worded can influence the results of informational or mental dowsing. The Solar Noon period can last for 20-30 minutes, and the questions did not specify at what stage in the process the questions were referring to. Nor did any of the questions state whether a minimum, maximum or average was required or what date and time the readings were required for, although some of the team may have mentally added this to the questions they asked in order to be more specific.

We have also noted in previous project sessions that when holding dowsing devices above circular Bovis and colour spectrum frequency charts for some time and letting the energy move the devices, the energies have been shown to be in perpetual motion and readings are constantly changing and cycling, often within split seconds. It is therefore possible that the height and depth of a tree's energy field fluctuate quite a lot over short periods of time.

Ascertaining the number of lines of energy connected to the Beacon Tree was much more accurate with Diane, Kate and Maria all getting the same result. This involved the vibrational 'show me' technique of using a dowsing tool such as a Rod or Pendulum and asking it to move when the Dowser comes into physical contact with an energy field.

SESSION 6 LANDSCAPE PENTAGRAMS - RESULTS

Using the eye dowsing technique Mave was able to perceive 9 lines connected to the Beacon Tree. She described 5 of these as heavier or lower frequency lines and 4 as almost transparent, higher frequency lines. She purposely did not mention these on the day so as not to influence the rest of the team. It appears that the Diane, Kate and Maria picked up the five denser lines that Mave perceived but not the other four.

Trees have multiple energy fields consisting of several differently shaped layers as well as connections to other trees, underground water and energy lines both above and below ground. Different dowsers using their preferred methods tune into different fields associated with the trees and the vortices in which they stand. For example, Mave and Diane can perceive the auras around physical trees extending outwards in the shape of the canopy, Maria dowses the five concentric rings of energy at a low level around the trunks, Gordon Field dowses energy fields around trees that he calls Tree Devas expanding and contracting at the phases of the Moon as well as coils of golden energy rising up around tree trunks, and other Dowzers can find pictograms around trees, often appearing or changing as a reaction to the merging of the Dowser and Tree's consciousness. We will explore these pictograms in session 8.

Informational (mental) vs Vibrational Dowsing

On page 363 of her 'The Secret History of Stonehenge' book, Maria Wheatley notes that Informational dowsing (which she refers to as short cord pendulum dowsing) is not always very accurate. "Using this procedure the conscious mind is directing a specific question to the subconscious mind, which replies through the medium of the pendulum by either going back and forth, or round in circles." She refers to Vibrational dowsing as long-cord pendulum dowsing and informational dowsing as short-cord pendulum dowsing.

Regarding vibrational dowsing she says "... the conscious mind is not concerned in any way; instead, it is the *field* around the object being dowsed that is reacting. One can use a long-cord pendulum even when thinking about something else, or when the mind is blank, which is preferable, as the mind can easily influence the pendulum's movement if one has a preconceived idea or notion of the likely answer – a well-known pitfall of short cord pendulum dowsing and the reason it can be inaccurate"

Other experts in the field including the Biogeometry specialists Dr Ibrahim Karim and the late Dr Robert J, Gilbert also concur with this. They suggest that because the human consciousness is involved in informational dowsing it can skew results, so the phrasing of the dowsing question and the understandings and beliefs of the individual dowsers play a huge role.

When Mave dowses, she feels the energy with her hands coming up against what feels like a wall of energy containing electromagnetic plasma and she also perceives/views the energy using her eyes in a similar way to the late Billy Gawn. These are vibrational dowsing

SESSION 6 LANDSCAPE PENTAGRAMS - RESULTS

techniques. Mave very rarely uses informational dowsing as she finds it to be largely incorrect for her and her Higher Self will often intervene by saying something similar to “Not an encyclopaedia” or “Work it out for yourself”. However, if she comes up with a hypothesis using a mixture of vibrational dowsing and intuition, she then gets what appear to be accurate Yes/No answers to the question “Am I on the right track with this idea?”

The only dowsing tools that Mave uses are the Isis and Celeste pendulums which are vibrational dowsing tools in that they do not provide yes/no answers or other information, instead they alter vibrational energy fields. Mave and Diane Ellerton were taught to use the Isis pendulum on a Egyptian pendulum dowsing Zoom course with Maria Wheatley. The Isis device is essentially an energy battery that when screwed together takes in white light and emits whatever colour frequency is needed. It can be used on energy lines, water, food and in human healing and the effects can be checked using Maria Wheatley’s high Frequency Colour Dowsing chart. Experiments by members of the Celeste Education Hub run by Jean Marc Degioanni shows that the Celeste pendulum is very good at structuring water both in the human body, in food and with drinking and bathwater.

Ensuring Dowsing Accuracy

A good rule of thumb when doing any form of dowsing is to regularly check how accurate your answers are so you can explore the reasons for any inaccuracies.

Ali Denham, who is a remarkably accurate informational dowser, uses the Elizabeth Brown inspired questions “Have I reached any conclusions based on *misinterpreted* information?” and “Have I reached any conclusions based on *incomplete* information?” If she gets a “Yes” to either of those questions she then asks, “Are my conclusions at least 95% accurate?” If the answer to that is “No” she then asks, “Is it more than 5% significant that my dowsed responses are not 100% accurate?”

SESSION 6 LANDSCAPE PENTAGRAMS - RESULTS

Lionsgate Portal

The Lion's Gate Portal is said to last from late July to early August when the Sun is in the astrological sign of Leo. It occurs when the star Sirius, the brightest star in the sky, becomes visible again after being eclipsed by the Sun. This peaks when the Sun arrives at 15 degrees of Leo, reaching its climax on the 8th August. This alignment is said to create an energetic gateway, or portal, thought to shower the Earth with high-frequency energy.

The dowsing research at Newstead for this session was done on the 8th August 2026.

Although on the face of it this seems like a purely metaphysical concept, it was something taken seriously by the ancient Egyptians and coincided with the annual flooding of the Nile. From the point of view of this project, the daily solar transition periods at Sunrise, Solar Noon and Sunset are triggered when the Sun reaches certain positions relative to the local horizon and culminate with Beacon Trees broadcasting energy around the local landscape. The Lunar transition periods at New Moon, Half Moon and Full Moon are triggered when there is either 0, 90 or 180 degrees between the Sun and Moon when viewed from Earth and culminate with other trees releasing energy into the Biosphere. A transition period also takes place prior to the exact time of the Equinoxes and Solstices, and this is preceded by energy lines coming into harmony and geodetic features around blind springs expanding for several days in what is known as a Harmony Period.

It is therefore quite feasible that when the brightest star in the sky is at 0 degrees to the Sun and therefore invisible just like a New Moon, some sort of energetic transition period or portal may occur and allow the trees to be able to broadcast energy further than usual.

Some websites suggest that the Lionsgate Portal ends around 12th or 13th August. Interestingly there was a solar eclipse on 12th August 2026 during which Richard Sears monitored tree and capped vortex energy in his garden (see Appendix).

SESSION 6 LANDSCAPE PENTAGRAMS - RESULTS

Part 2 – The Pentagon Tree

The pentagram oak at Newstead is the one that we were led to in the afternoon of Session 5 when we were dowsing the energies of Beacon Trees and Tree Devas. This tree also turned out to be what Gordon Field calls a Tree Deva which he finds to have an energy field of 7 tree heights above ground.

We started by using informational dowsing to find out about the size of the tree's energy field above and below ground. We then used vibrational dowsing asking to be shown by either rods or pendulums the positions of the connected energy lines. We then returned to informational, dowsing to try and ascertain whether these lines do indeed connect into the Sherwood Forest pentagram.

Informational Dowsing

How many tree heights above ground is the energy field of the pentagram tree?

Kate	3 and a bit tree heights
Maria	90 (75 two weeks ago)
Mave	7

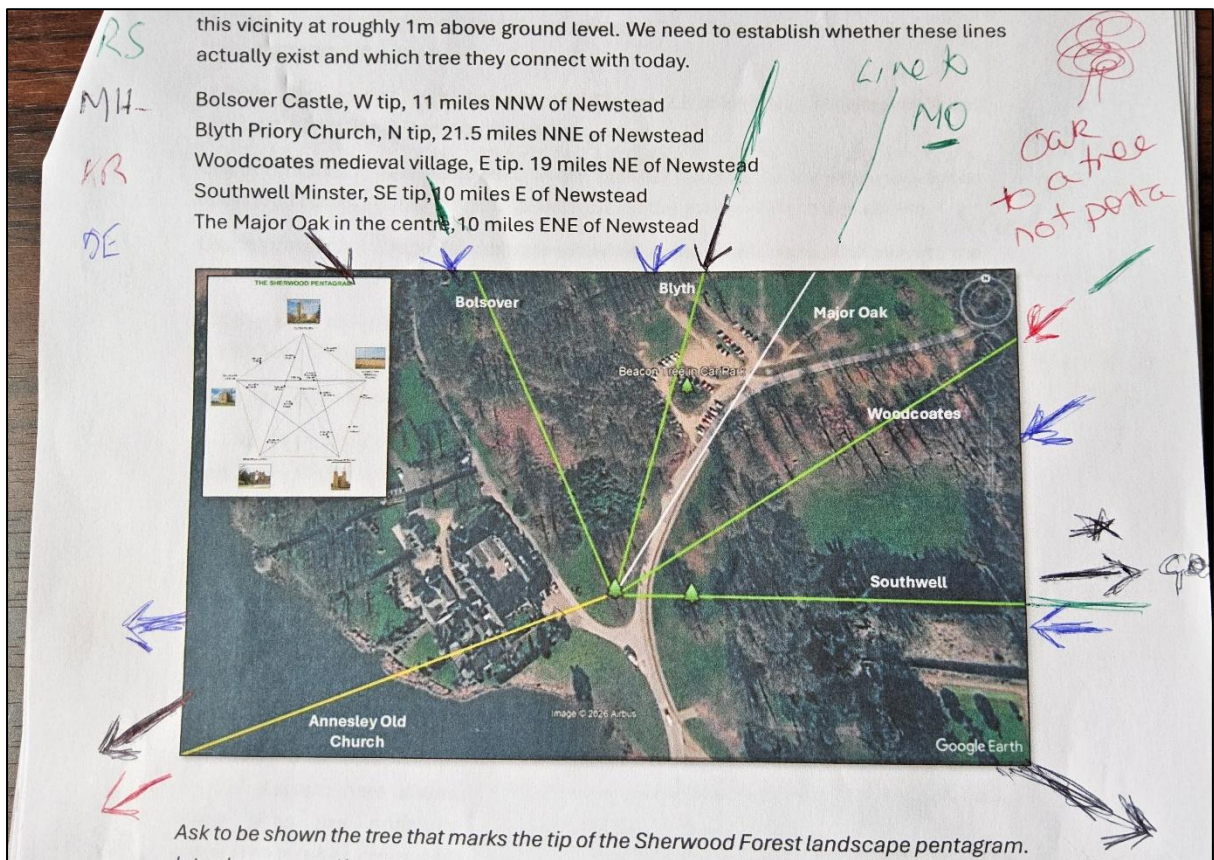

How many tree heights below ground is the energy field of the pentagram tree?

Kate	Almost 5 tree heights
Maria	20 (15 two weeks ago)
Mave	5

Maria noted that the low-level energy field of the Pentagon Tree was 18 of her steps away from the trunk (around 4.5 metres) and had 5 bands like she dowsed at the Beacon Tree. Maria is finding this on all trees she has dowsed. She is also finding that rather than being concentric circles these bands are slightly elliptical being larger on the side of the tree currently nearest the Sun.

SESSION 6 LANDSCAPE PENTAGRAMS - RESULTS

How many straight lines emanate from the pentagram tree's trunk at approximately one metre above ground level? Do any of these lines roughly line up with the Google Earth image of the lines of the Sherwood Forest pentagram?

On this diagram Mave marked where each of the team dowsed the lines connected to the trunk of the pentagram oak at around 1 metre above ground level. Richard's findings are shown in green, Maria's in black, Kate's in Red and Diane's in blue. The arrows show the predominant direction of flow of the lines at the time they were dowsed. Only Richard picked up the line connecting to the Major Oak.

MO = Major Oak (the centre of the Sherwood pentagram)

GO = Grandfather Oak (40m to the east of the pentagram tree on the Southwell line)

There was a remarkable similarity between the lines drawn on Google Earth image and those found by the team on the ground.

Note: The line going to Blyth on the google earth image is very close to the line connecting the pentagram oak with the Beacon Tree. The line going to Southwell on the image is very close to the line connecting the pentagram oak with Grandfather Oak. Additionally, the line that Kate found connecting the pentagram oak with a small oak to the Northeast, is very close the line connecting the pentagram oak with Woodcoates. This could account for some confusion in the informational dowsing results about where the lines go to.

SESSION 6 LANDSCAPE PENTAGRAMS - RESULTS

Informational Dowsing

Is there a line connecting to the Beacon Tree in the car park?

Kate Yes, I picked this up from the car park but not at the tree

Is there a line connecting to Grandfather Oak?

Kate No

Is there a line connecting to the twisted chestnut Tree Deva at the far side of the lake that we dowsed in Session 5?

Kate No

Is there a line connecting to Annesley Old Church 2.5 miles SW of Newstead? (Yellow line on the google earth image above)

Kate Yes

Use informational (yes/no) dowsing to ask whether the lines extend all the way to the Sherwood Forest pentagram tips (green lines on the google earth image above).

Kate No

Use informational (yes/no) dowsing to ask whether the lines extend all the way to the centre of the Sherwood Forest pentagram (white line on the google earth image above)

Kate Yes

Are there any more lines that do not go in the direction of the other pentagram links or the Beacon Tree? How many?

Kate No

Is the energy in these lines currently actively flowing or dormant?

Kate Yes

In what direction is the energy currently flowing along these lines? Towards the tree, away from it or in both directions simultaneously? If in both directions, what % of the energy flows in each direction

Kate The one to Annesley Old church is 100% flowing

What is the current width of these lines 2 metres away from the pentagram tree at 1 metre above ground level?

Kate sat under the pentagram tree and using her pendulum dowsed that one of the lines connected to Annesley Old Church and another went to a smaller oak tree to the NNE of Grandfather Oak. (This may have been on the Woodcoates line of the pentagram)

SESSION 6 LANDSCAPE PENTAGRAMS - RESULTS

Maria felt that there was a rebound effect to energy coming to the pentagram oak from the various connecting pentagram lines continued to other trees in the area, particularly Grandfather Oak. She use informational dowsing to ask questions around this which gained positive responses.

Maria also used informational dowsing to ask questions about how far a Beacon Tree network's energy would extend. She got a positive response to the networks being localised, and to rivers acting as boundaries across which the broadcast energy does not travel, and to Mave's suggestion that ancient parish boundaries (which can often be rivers or other bodies of water) often correlated with the extent of the parish Beacon Tree's coverage or patch.

SESSION 6 LANDSCAPE PENTAGRAMS - RESULTS

Sound-based experiments

We first played **Gayatri Mantra** on Mave's phone at the pentagram oak

Maria stood on the line connecting the pentagram oak's trunk with Annesley Old Church which she dowsed to initially be 4 steps in width and flowing away from the tree. On a scale of 1 to 10 with 10 being the maximum ever, the speed of the line dowsed as 4.

When Gayatri Mantra was played the line expanded from 4 steps wide to 12 steps wide. It had 4 bands within it and dowsed as 50% yin and 50% yang. The vibrational frequency was 15,000ub and the high frequency colours within it were blue (octave 5) and violet (octave 6)

Kate then sang a **tree blessing song** to the pentagram oak the line increased from 4 to 27 paces wide. The high frequency colours within it changed from blue (octave 5) to blue (octave 6) and from violet (octave 6) and ultraviolet (octave 5). The percentage yin/yang remained at 50%.

Mave felt that the energies had expanded further with the tree blessing song than they did with Gayatri Mantra, but more slowly. Diane observed that the energy increase went out to all the other trees as well.

SESSION 6 LANDSCAPE PENTAGRAMS - RESULTS

Part 3 - Solar Noon Transition Period

The aim of this experiment was for each of team to stand on a different line of energy connecting the trees and monitor its width and direction of flow during the 20-minute Solar Noon transition period, taking a reading once a minute. Mave provided forms to collect the data which can be found in the Appendices. Mave also put together a spreadsheet showing everyone's data by time.

** Richard conscious of the root system beneath where he was sitting

* Kate feeling a build up of pressure in her sternum progressing to her head

** Kate feeling fine now, not sure when stopped feeling pressure

SESSION 6 LANDSCAPE PENTAGRAMS - RESULTS

Solar Noon Transition Period Observations

BT – Beacon Tree in car park; PT – Pentagon Oak; GO – Grandfather Oak

Kate – standing on the line between BT & GO, near to BT

Diane – standing on the line between BT & GO, near to GO

Richard – sitting on the line between BT & PT, near to PT

Maria - standing on the line between PT & GO, near to PT

Mave – sitting on the line between PT & Blyth pentagram tip, near to PT

At 12:50 (20 minutes before Solar Noon)

- the line between PT & BT (140 metres) was flowing towards PT
- the line between BT & GO (140 metres) was flowing towards GO
- the line between GO & PT (40 metres) was flowing towards PT
- the line between Blyth & PT was flowing towards PT

At 12:52 (18 minutes before Solar Noon)

- the line between Blyth & PT reversed its flow from towards PT to away from PT

At 12:55 (15 minutes before Solar Noon)

- Diane reported the line between BT & GO reversed its direction to flow away from GO

Between 12:56 and 12:59 (14 to 11 minutes before Solar Noon)

- Maria experienced no flow in the line between PT & GO for 4 minutes followed by a crash and then a flow reversal
- Mave experienced no flow in the line between PT & Blyth for two minutes followed by a flow reversal
- Richard experienced a flow reversal in the line between PT and BT at 12:57

At 12:59 (11 minutes before Solar Noon) simultaneously

- On the line between PT & BT Richard experienced a drop in line width and speed of almost 50%
- At the BT Kate started to experience a build-up in pressure felt in her sternum
- On the line between PT & GO Maria experienced the line readings crash
- On the line between PT & Blyth Mave reported she felt like the line was wobbling a bit

SESSION 6 LANDSCAPE PENTAGRAMS - RESULTS

At 13:00 (10 minutes before Solar Noon) simultaneously

- On the line between PT & GO Maria experienced a reversal in flow direction towards GO
- On the line between BT & GO Diane experienced a reversal in flow direction towards GO

From 13:01 to 13:06 (9 to 4 minutes before Solar Noon)

- Mave reported that the Sherwood pentagram lines were energised and flowing, starting with a 2-way flow in them and the spirals around the core becoming progressively wider and faster
- Between 13:01 and 13:02 Richard reported heightened psychic abilities (rise in vibrations) allowing him to see into the ground beneath him

At 13:03 (7 minutes before Solar Noon)

- Kate reported the line between BT & GO line reversed its flow to be towards BT

At 13:04 (6 minutes before Solar Noon):

- The BT to GO line was at its widest (21 paces) near BT

At 13:06 (4 minutes before Solar Noon)

- the line between PT & BT reversed its flow to towards PT after a moment of no flow

From 13:07 to 13:08 (3 to 3 minutes before Solar Noon):

- Mave reported that the lines between PT and the Sherwood Pentagram had disappeared

At 13:10 (Solar Noon)

- the line between PT & BT was flowing towards PT
- the line between BT & GO was flowing towards BT from GO
- the line between GO & PT was flowing from PT
- the line between Blyth & PT was no longer energised

SESSION 6 LANDSCAPE PENTAGRAMS - RESULTS

Analysis of Solar Noon findings – general consistencies with other Solar Noon periods

From 12:51 to 12:55 Mave noted that energy was spiralling up and down PT at the same time frame as the trees and Capped Vortices spin their chakra or colour frequency bands during other solar transition periods.

At 12:57, after starting to feel dizzy, Mave reported that the Dragon Lines in the area were expanding and contracting their chakras/band colour frequencies consistent with how they do this for several minutes at the same relative time frame as in other Solar Transition periods

Analysis of Solar Noon findings – reversals in flow direction of lines connecting trees

At the Beacon Tree Kate observed that only one reversal of flow took place. That was at 13:03. The line between BT & GO was a consistent width from 12:50 to 12:59 when it started to get progressively wider, peaking at just over 3 times its original width at 13:04 and then gradually reducing back to its original width by 13:08.

At the other end of the line between BT & GO, a few metres from GO, Diane found the line changed its direction several times although some of these were only brief. The changes in line width were consistent with those found by Kate until the end when the line at the GO end did not reduce in width until Diane realised that this was because she was still standing on it. Once she moved off it, it then started to reduce in width.

Note: while analysing the results Mave realised that the line between BT & GO is 140 metres long and there may be Capped Vortices between the two that anchor the line and/or have lines splitting off in other directions. She confirmed this by remote viewing the area. Consequently, the differing directions of flow dowsed by Kate and Diane on different sections of the line between BT and GO were most likely explainable by the existence of the Capped Vortices along the line.

On the line between PT and GO Maria observed one reversal in flow direction following a period of several minutes of no flow whatsoever. The line width was at its maximum (15 paces) when it was flowing from GO to PT and much narrower (1-4 paces) when flowing from PT to GO. Its speed seemed to be consistently about 80% of the maximum speed that line ever reaches.

On the line between BT and PT Richard experienced two reversals in flow, one following a brief period of no flow. The line width gradually increased while it was flowing from BT to PT, then reduced and increased again while flowing from PT to BT, reduced by half when it changed back from to flow from BT to PT finally becoming its original width of 2 feet again at the end. The speed of flow in the line seemed to be consistent with its width, suggesting the line needed to become wider in order to flow faster.

SESSION 6 LANDSCAPE PENTAGRAMS - RESULTS

On the line between PT and Blyth Mave experienced several reversals in flow following brief periods of no flow and the lines disappeared altogether for 2-3 minutes towards the end of the period. The speed increased dramatically while it was energising the Sherwood Pentagram lines.

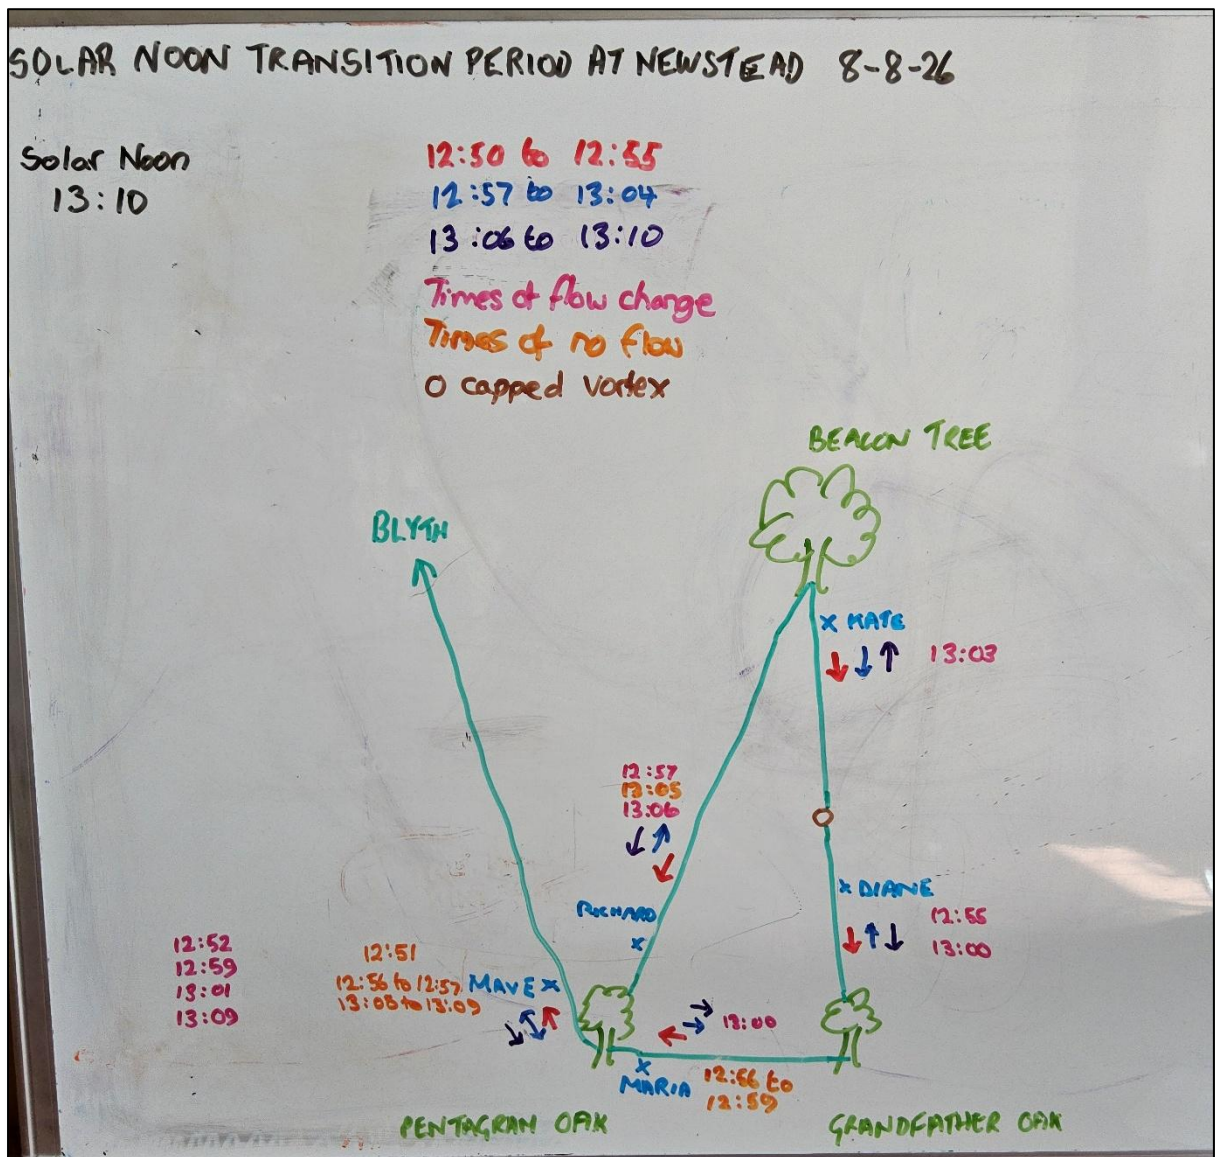

Analysis of Solar Noon findings – energising the Sherwood Pentagram

During the Solar Noon transition period on 29th July at Newstead, Mave reported that the pentagram lines connected to PT were energised for 6 minutes (from 14 to 6 minutes before Solar Noon). On 8th August this happened for 5 minutes between 13:01 and 13:06) (from 9 to 4 minutes before Solar Noon).

From experiments with cobbles on her lawn, Mave had assumed that tree lines flow away from the Beacon Tree before and after the Solar Noon period and towards the Beacon Tree during the Solar Noon period to feed the Beacon Tree the energy for it to broadcast. However, it seems there is a slightly more complex relationship between the Beacon Tree and other nearby trees that it works closely with, especially when a landscape geometry is involved. GO sent energy towards the BT for the last 8 minutes of the period consistent with the BT collecting energy to broadcast. PT send energy to the BT for 8 minutes in the middle of the Solar Noon period while the Sherwood Pentagram was being energised suggesting that energy from the rest of the Sherwood Pentagram is sent to the BTs at the tips for them to broadcast at the end of the Solar Noon period.

SESSION 6 LANDSCAPE PENTAGRAMS - RESULTS

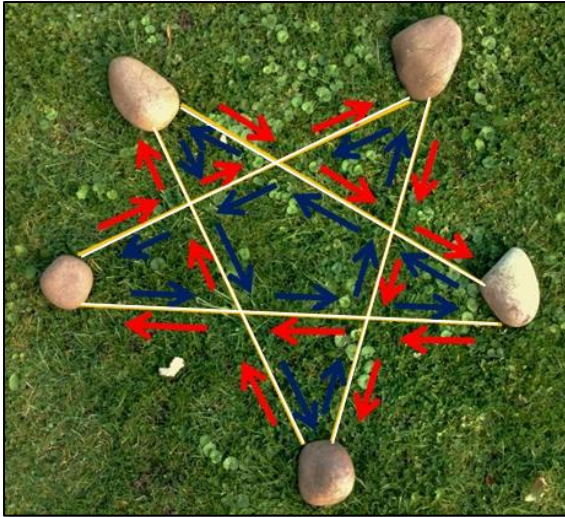

Mave drew the following whiteboard diagram to illustrate how and when the directions of flow along the lines being monitored changed. This suggested three distinct phases to the Solar Noon transition period where the trees are concerned.

Kate and Diane didn't experience and periods of no flow on the line connecting the Beacon Tree with Grandfather Oak. Both experienced the energy flowing away from the Beacon Tree at the start of the period but after that the energy at the two ends of the line flowed in differing directions suggesting the capped vortex part way along the line played a part.

Richard and Maria both found energy flowing away from the pentagram oak at the start of the period and towards it during the middle phase of the period.

SESSION 6 LANDSCAPE PENTAGRAMS - RESULTS

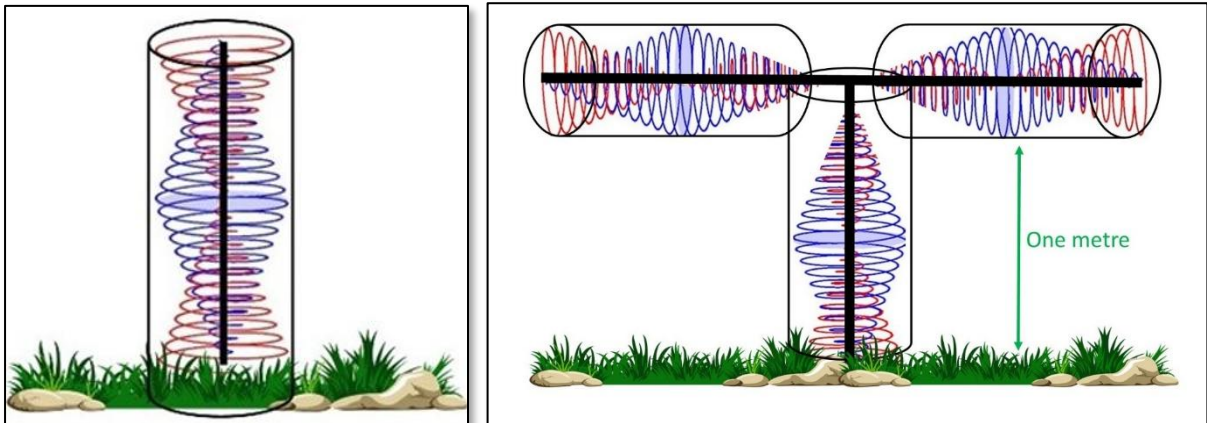

Mave experienced a two-way flow of energy around the pentagram in the middle of the transition period consistent with the cobble experiments she did on her lawn which showed a two-way flow of energy within a pentagram formed by placing 5 cobbles in a circle was active.

SESSION 6 LANDSCAPE PENTAGRAMS - RESULTS

Part 4 - Capped Vortices splitting into Energy Lines

The aim of the afternoon's dowsing was to locate Capped Vortices where the horizontally rising tube of energy or light at the centre of the vortex is bent by 90 degrees when it reaches one metre above ground level and becomes several horizontally flowing energy lines. These would then be monitored during the mid-afternoon transition period.

For reference, the diagram on the left shows the structure of a Capped Vortex and the diagram on the right shows how a Capped Vortex can split into multiple energy lines:

The team dowsed for Capped Vortices near to the Pentagon Oak. Richard questioned these being created by the tap roots of trees as many trees don't have large tap roots. In some areas of the country there are very few Capped Vortices whereas at Newstead and in Mave's garden they are very prolific. As we noted in Session 1 – Tree Energies, this is likely to be due to the geology. The magnesian limestone and large aquifer that Newstead as well as both Mave and Diane's homes are above seem to be ideal for the formation of Capped Vortices whereas Darwen in Lancashire where Chris Tonge was dowsing in Session 1 and Reigate in Surrey where Sare Bassett has dowsed several project sessions, seem to have far fewer Capped Vortices. The geology of these three areas may mean that trees here are less likely to sink deep tap roots and therefore create Capped Vortices.

SESSION 6 LANDSCAPE PENTAGRAMS - RESULTS

After finding a Capped Vortex with no connecting lines, Richard found another to the north of the pentagram oak. The team dowsed that it had 3 horizontally flowing lines radiating from it that split off from the vertical core at one metre above ground level. In the picture the centre is marked by the crossed yellow tent pegs and the three radiating lines by the red tent pegs.

Mave demonstrated how she feels the various energies within the Capped Vortex with her hands, feeling the pressure like a wall of energy, which some people feel as a tingling sensation. She starts by placing her hands around the central core of the capped vortex which is about 2cm in diameter and rises vertically from the ground. She then locates the two spirals within the Vortex by floating her hand above the Vortex, palm facing downwards, and letting the energy move her hand. When her hand moves counterclockwise it is showing her the female/yin/negative spiral and when her hand moves clockwise it is showing her the male/yang/positive spiral. At the same time her hand will move up or down and in or out depending on whether the spiral is rising or falling and expanding or contracting.

The team tried to dowse the energies with their hands with varying levels of success. For example, Maria found she could locate the central vertical core of a Capped Vortex with her hands but not the two spirals surrounding it, although she could dowse them with her dowsing tools.

Kate found another Capped Vortex at the other side of the Pentagram Oak with 5 lines radiating from it, again splitting off at right angles from the vertical core at one metre above ground level. In the picture the centre of the Capped Vortex is marked by the crossed twigs and the five radiating lines by straight twigs,

SESSION 6 LANDSCAPE PENTAGRAMS - RESULTS

Part 5 - Mid-Afternoon Transition Period

The Mid-afternoon transition period is the 15 minutes period between 3pm and 3:15pm BST when the energy fields trees, the lines connecting trees, Capped Vortices and water lines can no longer be detected, appearing to have collapsed. They dowse as having gone underground, some of them into the Elemental Realm. This only seems to happen during the half of the year when the British Isles are in British Summer Time (GMT+1). Paula Norman from the Dowsing Research Group has also provided information showing how human physiology and plant life changes around 3pm.

The aim of this experiment was for each member of the team to stand on either one of the lines of energy connecting the trees or next to one of the Capped Vortices to monitor its width and direction of flow during the 15-minute mid-afternoon transition period, taking a reading once a minute and noting any emotions or observations as well. Mave provided forms to collect the data which can be found in the Appendices. Mave also put together a spreadsheet showing everyone's data by time.

Saturday 8th August 2026, Newstead Abbey, Mid Afternoon Transition Period Weather hot and sunny, lovely in shade of trees BT - Beacon Tree, PT - Pentagram Tree, GO - Grandfather Oak, CV - Capped Vortex

15:14	1	4	*	3	3	3	Back	Back	3	Back	
15:15	1	4	*	4 **	3	3	10"	1	3	Happy again!!	

* Richard felt everything slowing down
 * Maria started with backache and breathing difficulties
 ** Maria's backache eased and breathing much better

The Capped Vortex that Richard was monitoring on the line between PT & BT had 3 lines radiating from it. It changed its Yin/Yang polarity between 15:04 and 15:08. However, it did not disappear and instead increased its diameter from 4 to 6 feet which it maintained for most of the period before returning to 4 feet. The associated line that Richard was monitoring also increased in width during this period and did not disappear.

Maria was standing on the line between PT & GO (which may extend to Southwell) that she had monitored during the Solar Noon period. This time she noted that she started to get backache and have difficulty breathing from 15:07 but this all eased off at 15:15. The line width started and ended at 4 paces reducing to 1 pace and crashing several times in

SESSION 6 LANDSCAPE PENTAGRAMS - RESULTS

what appeared to be the same cycles observed at previous mid-afternoon transition periods.

The Capped Vortex that Kate and Mave were monitoring on the lake side (southwest) of the PT had 5 lines radiating from it. It narrowed then disappeared between 15:02 and 15:07. The line connected to this Capped Vortex that Kate was monitoring disappeared and returned at the exact time as the Capped Vortex. The line connected to this Capped Vortex that Mave was monitoring disappeared between 15:03 and 15:13, not returning for another 4 minutes after Kate's line returned.

We have found during previous mid-afternoon transition periods that some people can still dowse the Vortices and lines when Mave cannot. It could depend on how individual dowsers interact with them. Mave feels the electro-magnetic energy in situ with her hands so can only detect it when it is above ground.

Mave noted that when she was unable to find the Capped Vortex and associated lines, she started to feel bored and tired as if something was missing but when they reappeared, she felt happy and energised again. When they were about to disappear, she had a feeling of being pulled down.

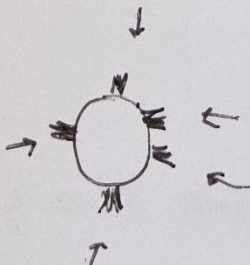

Diane fell asleep during this period which fits with Paula Norman's comments about how this time affects human physiology and Anne Pogson channelling that if someone has a 10-minute nap during this period it can revitalise their metabolism.

Part 1 – The Beacon Tree

Introduce yourself to the Beacon Tree in the car park and tell it what you are planning to do. Ask its permission, remembering to thank it once you have finished.

How many tree heights above the ground is the energy field of the Beacon Tree? **3**

How many tree heights below ground is the energy field of the Beacon Tree? **2.5**

What is the average radius in miles of the overground area that this Beacon Tree broadcasts energy over during the Solar Noon Transition period? **5**

How deep underground in tree heights do the energies broadcast by this Beacon Tree go during the Solar Noon Transition period? **150 (125-150)**

How high into the atmosphere in tree heights do the energies broadcast by this Beacon Tree go during the Solar Noon Transition period? **> 5,000 tree heights**

How many straight lines of energy emanate from the Beacon Tree's trunk at approximately one metre above ground level? **5**

Draw a rough plan of these in your notebook, marking any obvious things that they connect to such as other trees.

All m High there is a bump all round where the energy lines come out (5) the tree roots stick out where the lines are.

SESSION 6 LANDSCAPE PENTAGRAMS - RESULTS

Richard Sears dowsing the Eclipse in his Garden 12/8/26

Sister Willow and the Solar Eclipse of 12th Aug 2026 - (This follows write up of 3rd Aug 2026)

The solar eclipse in my area was said to get to about 90% coverage between 7.10pm and 7.12pm and so I thought it might be interesting to monitor a few things leading up to and through it.

After visiting Newstead on 8th Aug, I did find that over my well at the side of the house is a strong capped vortex. On holding the pendulum over - it spins very fast. I also asked if it's linked to the Willow (SW) and it said yes. And indeed, there is a dowsable line between the two.

So, at about 6pm (after playing around with my impromptu pin hole camera and trying to set it up!) I went out and started asking general questions of SW and the capped well vortex: -

SW – Will you power down at any point over this eclipse? – Yes
Energy lines (2 no) (marked on plan) – will you power down? – Yes
Will Move's  at Newstead power down? - No
.....will it change in some way - Yes

So, from about 6.15pm when the first shadow started to cross the sun I readied myself with doing some readings on the Bovis scale (per thousand of ub) :

	SW	Capped vortex over well	Capped Vortex on intersection
1825	180k		
1830	140	150k	70k
1835	100	110	
1845	80	50	30
1855	30	30	17
1900	5	12	6
1905	7	None/closed	None/closed
1910	110	0	0
1915	180	6	50

So, the interesting things for me were - SW just before the eclipse came down to 7000 ub but then recovered quickly, and the two capped vortexes had no bovis readings over the max eclipse period. Also, on holding the pendulum over both the well and the standing stone, there was no spin of the pendulum at all. (It physically progressively slowed down at each reading to the dead stop point).

I also asked the Well and other capped vortex at 1910hrs do you have chakras present and they said no, but when asking SW she said yes they were present.

I also at various times checked if the two energy lines in the garden were operating and the rods crossed saying they were, although the flow might have been at lower strength.

I also checked SW's 5 concentric rings (auras) and they were fully functioning.

RVS – 13th Aug 2026
