

SESSION 4 SUMMER SOLSTICE - RESULTS

This document details the results of Session Four of the Newstead Dowsing Research Project that took place in June 2026. The session focussed on Summer Solstice Energies. The main highlights are summarised on pages 4 and 5. This is followed by a detailed analysis of the findings. The Appendices contain the data sheets submitted by individual Dowsters and a transcript of channelling that describes how Devic Beings are connected to Energy Lines.

SESSION 4 SUMMER SOLSTICE - RESULTS

OVERVIEW OF PROJECT

Aim of the Project

The aim of this dowsing research project is to explore different aspects of tree, water, and earth energies and to investigate how the different aspects are interconnected, as well as how they are affected by sound-based stimuli, crystals, the Solar Noon transition period (the 20-minute period leading up to Solar Noon), the mid-afternoon transition period (3pm to 3:15pm), the periods surrounding New & Full Moon and the periods surrounding the Equinoxes and Solstices.

A team of Dowsters led by Mave Calvert is working on the ground in the parkland surrounding Newstead Abbey in Nottinghamshire. Other individuals and groups are carrying out parallel research in other locations.

One of the aims of this research project is to investigate Mave Calvert's ideas about these energies and try to prove, disprove and/or revise some of these ideas and hopefully find other interesting things as well.

The project documentation can be found on Mave's dowsingsherwood.com website:

[Research Project \(List\) | The Sherwood Dowser](#)

As well as the Project Summary and details of each individual themed session, there is a document containing the pendulum dowsing charts, a document containing information about the location, geology and a brief history of the Newstead area, and documents giving opportunities for Dowsters to do some remote/map dowsing and monitor some energies in their own home and garden.

Session 4 – Summer Solstice Energies

The fourth of eight project sessions took place in June 2026 and focussed on how the Summer Solstice expanded the energies associated with tree, water, energy lines and energy vortices. The participating Dowsters were:

NEWSTEAD TEAM 21/6/2026

Mave Calvert, Kate Richardson, Sian Wilson

DOWSTERS WORKING ELSEWHERE

Ali Denham at Blackdown Rings, Devon, 21/6/26

SESSION 4 SUMMER SOLSTICE - RESULTS

SUMMARY

✦ The day before the Solstice is known as a Harmony Day when an Exclusion Zone forms around Blind Springs in the form of a double-edged cylinder. At Newstead and in Mave's garden this cylinder was around 4 metres high and had a radius of around 8-9 metres from the Blind Spring. These cylinders formed in around 5 minutes following Moonrise on Harmony Day (11:24am on Saturday 20th June 2026)

✦ The Exclusion Zones remained in place for 4 days and dissolved during the Solar Noon transition period on 24th June 2026.

✦ Whilst the Exclusion Zone was in place the Energy Lines were deflected by the Exclusion Zones and entered and left the Blind Spring recharging points by rising up over these exclusion Zones

✦ The Exclusion Zone is similar to the Cylinders that form around Caped Vortices at New Moon and Full Moon, but on a much larger scale. We will explore these in September in Session 7 – New and Full Moon energies.

✦ There were no 20-minute Solar Noon, Sunset and Sunrise or mid-afternoon transition periods between the Harmony day energies forming around Blind Springs and the very powerful Summer Solstice transition period that took place during the 20-minutes leading up to the exact time of the Solstice (9:24am on 21st June 2026)

✦ During the Solstice period the geodetic energies around Blind Springs (Geospiral, necklace, primary haloes and secondary haloes) expanded to up to three times their normal radius.

✦ Ali Denham noted that geodetic Aquastats become wider, more powerful and ever-changing during the Solstice period. At a Ring Enclosure she exhibited an 8-fold configuration of Guy Underwood's surface pattern whereas previously she considered a 4-fold extremely powerful.

✦ Inside the Exclusion Zone neither the energy fields of Trees nor the straight Energy Lines that connect their trunks can be detected. However, outside the Exclusion Zone these are still present and the energy field around the trees was found to have almost tripled in size with dowsing suggesting that this is maintained for the entire Solstice period.

✦ The mid-afternoon transition period did not take place on Harmony Day, but it took place on the day of the Solstice. The Energy Lines were noted to have cores that were much wider than normal and hot to the touch, giving higher Bovis readings than normal.

SESSION 4 SUMMER SOLSTICE - RESULTS

✦ A Solstice Solar Transition period took place during the 20 minutes leading up to the exact time of the Summer Solstice (9:24am BST on Sunday 21st June 2026 in the northern hemisphere.) This was much more powerful than the Solar and Lunar transition periods that occur on a regular basis before Sunrise, Solar Noon, Sunset, New Moon, Half Moon and Full Moon.

✦ Ali Denham dowsed a large energetic torus feature emanating from the Beacon Spring at Blackdown Rings. This feature was constantly in motion. It expanded rapidly to a maximum of 3 miles in radius during the Solstice Transition Period. She noted that the Aquastats coming from this Beacon Spring circumnavigated the rings of the enclosure and then fed back into this torus.

✦ Energy Lines are used by Elemental/Devic Beings whose job it is to anchor the light from the Sun, and handle and protect the incoming energy which they convert into many strands and vibratory patterns of life force to suit every form of created life. They then weave this energy together with energy from other sources including rocks and minerals, into the various Grids and networks of Energy Lines surrounding the Earth.

✦ The Solar, Lunar, Solstice, Equinox and Mid-Afternoon transition periods are all times when the Elemental/Devic Beings do their work. Our research is showing that they utilise the esoteric colours of the Sun in these processes. These times involve seemingly complex interactions between Trees, Underground Water, Earth Energy Lines, Earth Energy Vortices. Whilst each of these periods exhibits subtle differences, the net effect is always to cleanse, re-energise and harmonise the Earth's Energy system.

✦ Human interference with the Energy Lines can adversely affect what the Elementals/Devic Beings are trying to achieve. We should therefore be very wary about changing or moving these lines in any way as we do not fully understand how they are used by these unseen Beings who are the architects of our landscape. This substantiates what Chris Tonge was told via trance Medium Michael Reccia in April 2023 when he asked whether Energy Lines are conscious. See transcript and link to YouTube in Appendix 2.

SESSION 4 SUMMER SOLSTICE - RESULTS

DETAILED FINDINGS

Harmony Day changes at the Summer Solstice

Note: *Although Mave Calvert has found many of the late Rory Duff's dowsing observations in regard to harmony days very insightful and helpful, and has built upon them, she would like to make it clear that she in no way condones his practice of moving Energy Lines or "repairing" Nodes which she believes to be counter-productive to the Earth's own healing and cleansing system.*

A Harmony Day is the day before a Solstice and Equinox when the late Rory Duff showed that the frequencies of various types of Energy Lines come into harmony. This has been substantiated by Chris Tonge. Rory also showed how energetic changes would take place around his "repaired" Nodes. Mave then found that these energetic changes actually take place around all Blind Springs and not just "repaired" Nodes.

On Saturday 20th June 2026 Mave monitored the energies around her home and garden where there is a Blind Spring on the lawn above which stands a one-metre-high slate monolith. This is currently used as a recharging point by an Energy Dragon Line. Mave has done monitoring on several occasions prior to Equinoxes and Solstices and has found similar patterns that matches the energetic changes reported by Rory Duff.

SESSION 4 SUMMER SOLSTICE - RESULTS

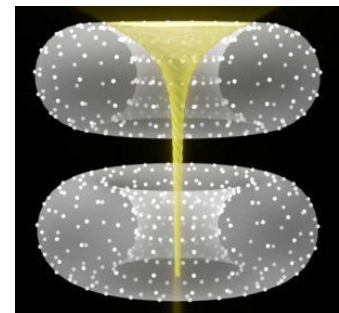

Mave's Harmony Day Observations 20th to 21st June 2026

Harmony Day was Saturday 20th June and the exact time of the Solstice was 9:24am BST on Sunday 21st June.

The Sunrise Solar Transition period between 04:17am and 04:37am on the morning of Harmony Day 20th June 2026 took place as normal

At 8:30am all the energies in Mave's home and garden were as dowsing the same as usual. An hour later she sensed a feeling of expectation.

At 9:50am the energetic torus generated by the pulsating water dome of the Blind Spring beneath the slate monolith on the lawn had risen to around 4 feet (1.2 metres) above the ground. Normally it is only around 18 inches above ground. Simultaneously the Primary and Secondary Haloes surrounding the Blind Spring contracted inwards by a metre or so. A second torus normally floats above the lawn with its base around 10 feet (3 metres) above the ground. This upper torus was still in its usual place; however the lower torus had now risen closer to it so the funnel at the bottom of the upper torus and funnel at the top of the lower torus were now only around 2 metres apart. See diagram which is one of Rory Duff's. The Bovis readings for the Blind Spring and Energy Line were marginally higher than before.

Between 10:28am and 10:50am Mave noted that the feeling of expectation had gone, and everything seemed quiet and as normal. It was as if a preparation had taken place earlier with the energies rearranging themselves in readiness followed by a period of calm and quiet. We have found in the research project that prior to both the Solar and Mid-afternoon Transition Periods there is also a short time where the energies seem to prepare for what is to follow, so this may be the same sort of process.

At 11:20am the Primary and Secondary Haloes had contracted in by a further metre, and the upper and lower toruses were now only around one metre apart.

At 11:22am Mave was sitting in the Capped Vortex in her bay window observing the lawn. Although the Sun was behind clouds, she started to feel very hot. It seems the Vortex itself had suddenly become very hot.

At 11:24am Mave observed that the two toruses had joined and formed an egg-timer like shape with its central pinch about one metre above the monolith. This was the exact time of MOONRISE. Mave has observed on previous occasions that depending what time of day it takes place, Moonrise can be one of the triggers for the Harmony Day energetic changes to take place. Perhaps the extra boost of light created when the moon rose above the horizon reflecting the light of the Sun was sufficient to trigger this process?

SESSION 4 SUMMER SOLSTICE - RESULTS

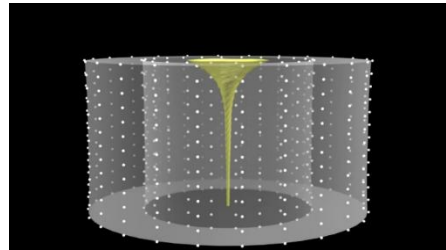

At 11:25am Mave noted that she could no longer detect either the Primary or Secondary Haloes that were both normally within the bounds of the house and garden.

At 11:27am the pinch between the toruses had become very narrow. The lower torus was descending underground, while the upper torus was resting on the lawn with its bottom funnel right over the Blind Spring and the monolith within the funnel.

At 11:28am, four minutes after Moonrise, Mave could feel a double-edged cylinder of energy expanding outwards away from the Blind Spring. It moved behind her quite fast. She could no longer detect the energies of the Bay Window Capped Vortex that she was sitting in.

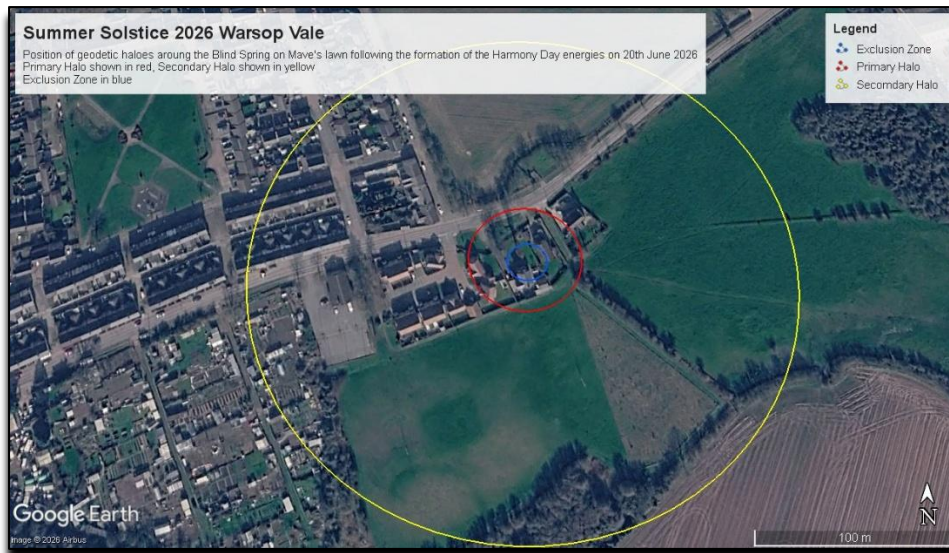

At 11:30am Mave observed the two toruses had now parted again with the upper torus having risen slightly and the lower one just poking above ground level. She could no longer detect the Energy Dragon Line on the lawn. Also, the straight line between the Plum and Poplar trees that normally traverses the lawn had gone.

By 11:32am When measured in a SSE direction from the centre of the Blind Spring the double-edged cylinder (see Rory Duff's diagram right) was around one5 metre wide with its inner edge 9 metres from the centre of the Blind Spring. Its height was around 4 metres above the ground and using her hands Mave felt the sides to be vertical. She could detect the Capped Vortices and Energy Lines outside this cylinder but not within it hence it being referred to as an Exclusion Zone.

At 11:36am Mave could sense the inner edge of the Primary Halo on the rugby field behind her house some 28 metres from the centre of the Blind Spring. She could sense the Secondary Halo has expanded to some 150 metres from the centre of the Blind Spring. At the Winter Solstice of 2021 the Secondary Halo had expanded to more or less the same as today whereas the Primary Halo didn't expand as far today. See comparative Google Earth images on next page. This expansion lasted throughout the entire Solstice period.

SESSION 4 SUMMER SOLSTICE - RESULTS

Solar/Lunar Transition periods on 20th and 21st June 2026

No Solar Transition period took place leading up to Solar Noon on Harmony Day (20th June). This would have been from 12:46pm to 13:06pm. The Capped Vortices outside the Exclusion Zone started pulsating at 12:41pm as if there was a pressure build up in them with a sense of expectation, but no transition period was initiated and by 12:47pm the sense of expectation had dissipated.

No Solar Transition period took place leading up to Sunset on Harmony Day. This would have been from 21:07pm to 21:27pm. Instead the energies started to power down and go into their overnight rest state around 9pm.

No Mid-Afternoon Transition process took place at 3pm on Harmony Day.

No Lunar Transition period took place leading up to First Quarter (22:56 on 21st June) because it was after dark (the Sun had set at 21:35 at Mave's home location) and the transition periods only take place at locations where it is daylight.

No Solar Transition period took place leading up to Sunrise on the day of the Solstice (21st June). This would have been from 04:20am to 04:50am at Mave's location.

A very powerful Solar Transition process took place in the 20 minutes leading up to the exact time of the Solstice which was between 9:04am and 9:24am on 21st June 2026. Following this the normal Solar transition periods started to take place again.

SESSION 4 SUMMER SOLSTICE - RESULTS

Summer Solstice Solar Transition Period (9:04am to 9:24am)

A 20-minute Solar Transition period takes place before the exact time of the Solstices and Equinoxes. This was between 9:04am and 9:24am BST on the morning of June 21st, 2026, at all locations in the British Isles, almost 5 hours after Sunrise.

Mave Calvert dowsing Solstice Transition Period at Warsop Vale on 21st June 2026

Mave attempted to dowse the Solstice Solar Transition period near the Blind Spring on her lawn prior to leaving for Newstead at 9:30am.

Mave began dowsing at 9:02am when she felt a sense of expectation. She could dowse Earth Energy Vortices and energy lines outside the Exclusion Zone but not within them where it felt quiet and calm.

9:04am was the official start time of the Solstice Transition period when the Beacon Tree Energies send up the sphere morphing into a counter-rotating donut shape to signal to other Blind Spring and Beacon Tree networks that the transition period has begun.

Also at 9:04am Mave sensed that the Capped Vortices outside the Exclusion Zone were starting to expand as they did yesterday when the Harmony Energies formed. However, this time they were not pulsating

At 9:05am Mave wrote in her journal that she could feel a very strong energy which felt more powerful than the usual Solar transition periods.

By 9:07am Mave wrote in her journal "I need to dowse this after the event because it is too powerful for me to tune into now"

SESSION 4 SUMMER SOLSTICE - RESULTS

Ali Denham dowsing Solstice Transition Period at Blackdown Rings on 21st June 2026

Ali Denham was dowsing at Blackdown Rings Hillfort near Loddiswell in South Devon. This is the same place where she had done the Water Energies Dowsing in Session 2 of this project.

The Blind Spring that she was guided to was just to the SW of the hillfort and it was a Mother Blind Spring. So-called because all the associated water veins flow away from the Blind Spring. It is therefore not populated by water from any other Blind Springs. However, its waters can flow to other lesser Blind Springs, hence the term “Mother.”

In addition to being a Mother Blind Spring, Ali also found that it was a Beacon Spring. Research by the artist tree dowser Gordon Field shows that Beacon Trees are associated with Beacon Springs. We will explore Beacon Trees and Beacon Springs further in the July project session. Ali found a nearby Ash tree that was the associated Beacon Tree. See Appendix for supporting images.

At 8:48am Ali began to experience a pressure headache and popping ears and noted that the 3 coil geospiral around the Beacon Blind Spring was contracting

At 9:02am Ali felt a pressure headache and pressure in her ears along with a strong feeling that she needed to quickly move away from the centre of the Beacon Blind Spring where she had been dowsing because the Torus surrounding it was about to expand very rapidly.

These feelings are consistent with Mave feeling that a very powerful transition period was taking place and it would not have been beneficial for her to tune into it just before driving to Newstead

Ali subsequently monitored the size of this torus:

8:30am	16 to 17.5 metres radius	
9:07am	90 metres radius	
9:12am	1 mile radius	
9:14am	3 miles radius	100 metres height
9:20am	2 miles radius	110 metres height
9:25am	1.5 miles radius	50 metres height
9:25am	1 mile radius	30 metres height
9:33am	90 metres radius	10 metres height
9:34am – 9:43am	Torus retracting slowly now & height reducing from 7m to 6m	

When measuring the Bovis of the Torus Ali found that the readings at the centre were much higher than at the edge whilst it was expanding. However, once it started contracting and reducing in height, the edge Bovis readings became higher than the centre. As the Newstead team had found in previous sessions, the Bovis seemed to be increasing and then crashing in cycles.

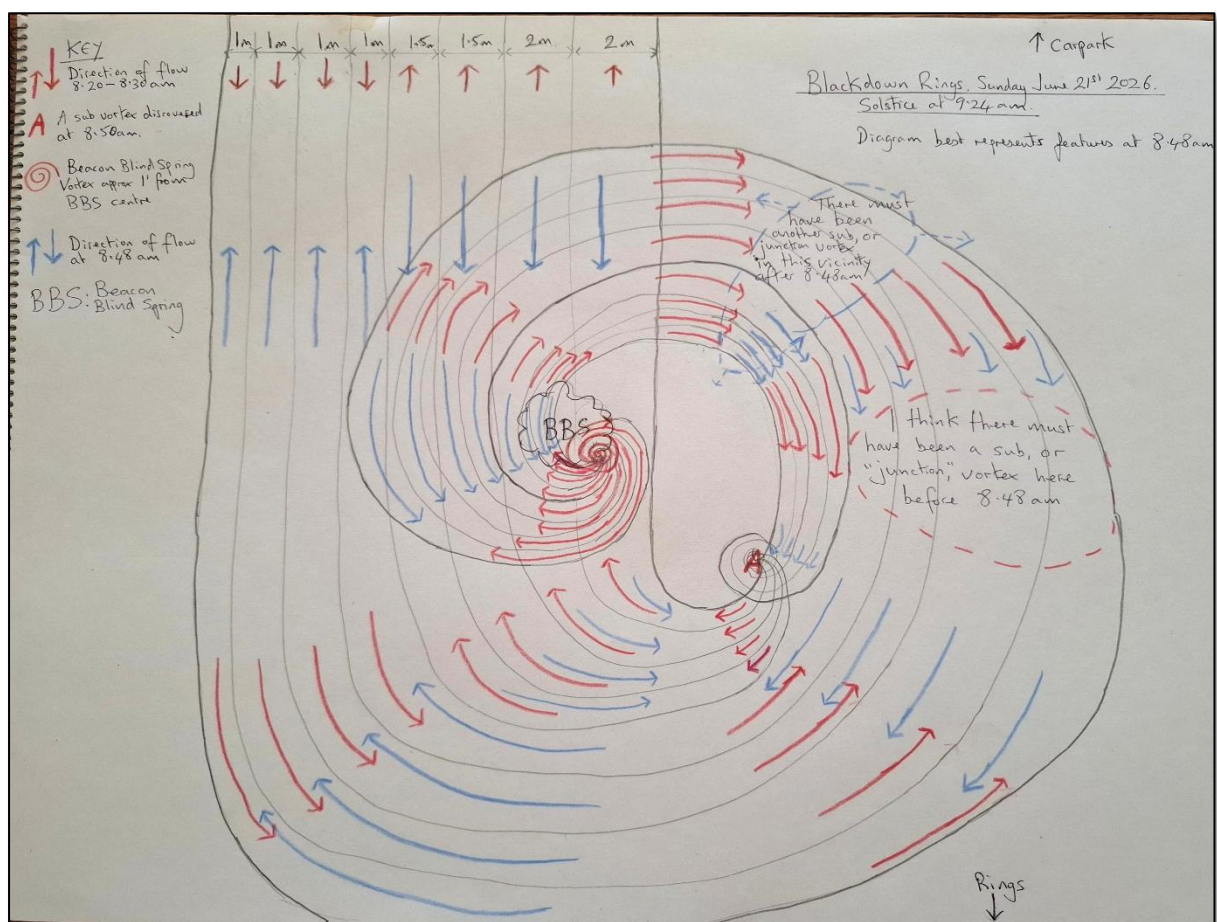

SESSION 4 SUMMER SOLSTICE - RESULTS

Ali also dowsed the colour frequencies of both the edge and centre of the torus. See Appe4ndix for details.

The following diagram represents the energies as they were at 8:48am, 36 minutes before the exact time of the Solstice at 9:24am.

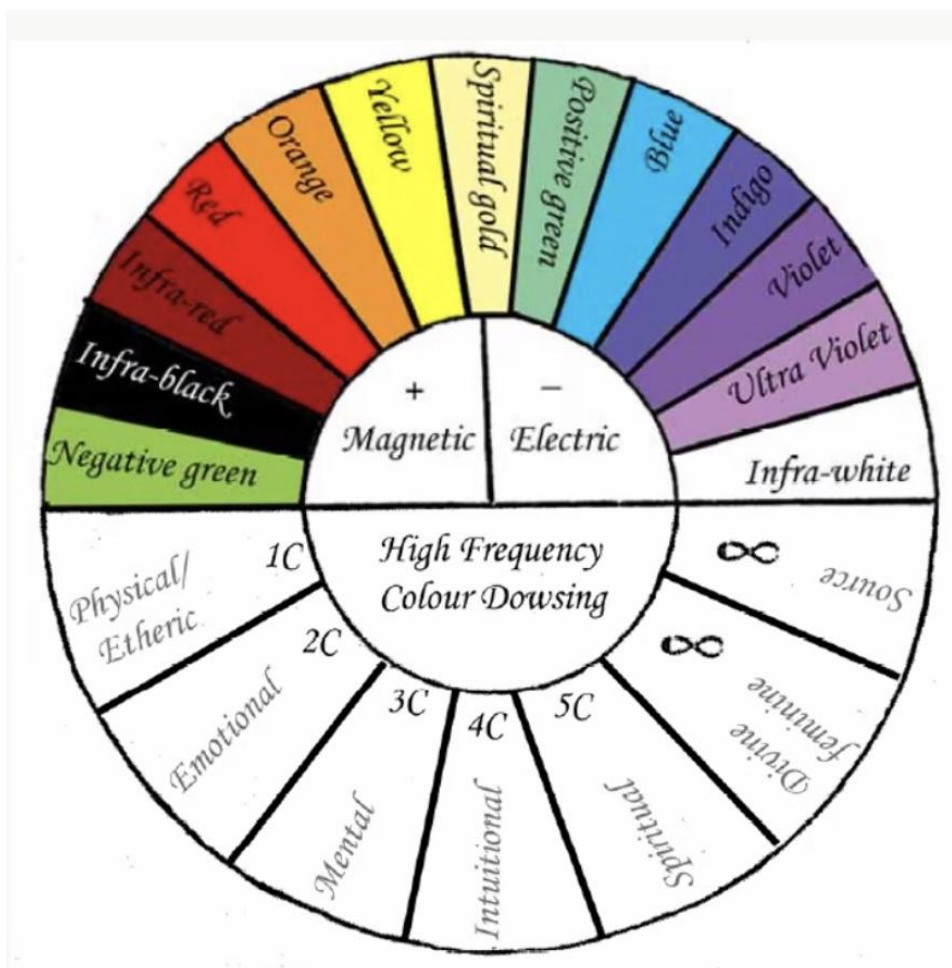

It shows 8 coils/bands emerging from the Beacon Blind Spring which measured 11m wide in total.

The directions of flow of the coils/bands reversed around the time that Ali experienced the pressure headache, popping ears and the geospiral beginning to contract.

SESSION 4 SUMMER SOLSTICE - RESULTS

High Frequency Colour Dowsing

Mave has found that Energy Lines and the individual Bands within them are comprised of white light and the plasma within them allows the prism effect to split the white light into the various colours of the electro-magnetic spectrum and frequencies that are required for whatever function the Line and/or Band is performing at any one time.

This is the High Frequency Colour Dowsing chart that we are using in the project. It was developed by Maria Wheatley who describes its use in detail in Chapter 8 of her "Divining Ancient Sites" book. Rather than simply dowsing the colour of an Energy Line or Band within it, this chart allows us to determine the frequency of that colour as well.

The frequencies can be likened to the octaves on a piano keyboard where for example each C note sounds different depending on its position on the keyboard with lower frequency/pitch notes at one end of the keyboard and higher frequency/pitch ones at the other.

The colours here are equivalent to the musical notes and the 7 sections at the bottom to the note's position within the octaves. Therefore, we can dowse each colour as having 7 possible frequencies which gives more depth to the research.

SESSION 4 SUMMER SOLSTICE - RESULTS

Part 1 – Blind Springs at the Summer Solstice

NEWSTEAD

After meeting at the café as usual, we proceeded to the field where we had done the water energy dowsing on 9th May 2026 so we could re-check the Blind Spring and the geodetic features associated with it

Sian, who can hear both water and earth energies, commented that the lines seem to be ramping up today with the Earth Energies sounding louder and not feeling as detrimental as they did on our previous visit to this area in May. She said she felt peaceful and calm rather than nauseous. (This could be because the energy lines have all come into harmony with one another.)

Sian also commented that today's energies felt very similar to when she is in a Stone Circle. (Stone Circles have Blind Springs within them).

Sian dowsed the Blind Spring as being 26 feet deep today with the top being approx. 6 feet below ground level. On 9th May the depth had been 30-35 metres. (Given the huge fluctuation in tides it is hardly surprising that underground water also exhibits large fluctuations in depth).

Exclusion Zone Cylinder

A double-edged cylinder with vertical walls had formed around the Blind Spring in the field similar to the one had formed around the Blind Spring on Mave's lawn. The inner edge of this cylinder was 17 Mave paces (approx. 8.5m) from the centre of the Blind Spring and it was 2 Mave paces wide.

It would be easy for a Rod dowser to confuse this with the Primary Halo if they weren't aware of the energetic changes that take place at this time.

We got the feeling that Elemental beings come up to "feed" within this double-edged cylinder.

Upward Spiral above Blind Spring

Sian detected an upward flowing spiral emanating from the top of the Blind Spring. It had 19 coils today compared to 13 coils last time we dowsed here in May. (This upward flowing spiral did not widen out more than about 1 metre in radius).

More research is needed, but it could be that it flows upwards into a large torus above the Blind Spring and its increases in colour frequency during the Solar Transition periods. See notes about the Solar Noon Transition period in Part 3.

SESSION 4 SUMMER SOLSTICE - RESULTS

Geospiral

The geodetic geospiral at ground level had widened out a lot since our visit in May and had 13 coils to it.

Mave counted 19 paces (approx. 9.5 metres) from the outer edge of the geospiral in the NE to the Blind Spring centre. Sian found the outer edge of the geospiral several metres further out than Kate did and we concluded that the geospiral was not remaining in exactly the same position but oscillating and pulsating, as if it was breathing in and out.

Colour Frequencies of the Geospiral

Using Maria Wheatley's High frequency colour Dowsing chart (see page 14), Sian dowsed the Blind Spring centre as Orange. The first coil/band of the geospiral working outwards in a straight line from the centre of the Blind Spring dowsed as Infra-Red and 1C (physical/etheric or Octave 1). The second coil was Yellow and Divine Feminine (Octave 6). The third coil was infra-Red 1C again, the fourth was yellow DF again and so on with the same colour frequencies repeating alternately.

The geospiral's coils/bands to being alternate IR/1C & Yellow/DF suggests an alternate Yin/Yang and high/low frequency pattern, similar to what is found in some Energy Lines. Infra-Red is a low frequency colour whereas Yellow is a mid-frequency colour. Octave 1 is the lowest frequency of IR whereas Divine Feminine is the second highest frequency of Yellow.

Maria Wheatley tells us that geodetics are the harmonic patterns generated by the movement of underground water. Mave has found that many Energy Lines are associated with underground water. Consequently, finding similar patterns in Energy Lines would make sense.

In the Autumn Equinox session it would be interesting to walk along the coils of the geospiral to see how the colour frequency changes and whether there is any gradual change along the coils

Primary Halo

Kate started looking for the Primary Halo at 11:43am and headed SW where there was the most open space available in the field. She found that the Primary Halo was 22 paces (5.5 metres) wide and started 221 paces (55 metres) from the centre of the Blind Spring. When we dowsed it in May it was only 81 paces (20 metres) away from the centre of the Blind Spring at its maximum extent.

Kate dowsed that this extent was the same 90 minutes ago and would be 90 minutes into the future.

This is an expansion of around 2.5 times its normal size which is consistent with how Mave found the Primary Halo around the Blind Spring on her lawn had expanded.

SESSION 4 SUMMER SOLSTICE - RESULTS

Secondary Halo

The Secondary Halo was too far away to find on foot in the time available with a small team so Mave remote dowsed it afterwards.

Just like the Primary Halo, the Secondary Halo had expanded by around 2 to 3 times its normal size over the Solstice period

The diagram below shows the rough positions on the ground of the exclusion zone, geospiral, primary halo and secondary halo. However, it should be noted that we have found that many of these geodetic features are actually elliptical rather than circular and also oscillate over time.

Water Veins

The five water veins associated with the Blind Spring were found to be in the same place as when we dowsed them in May.

However, this time we realised that there was another water vein at a different depth overlaying the water vein that was on the south-west side of the Blind Spring. This one veered off before reaching the Blind Spring. This wasn't detected last time as we were specifically asking for water veins associated with the Blind Spring.

SESSION 4 SUMMER SOLSTICE - RESULTS

DOWSERS IN OTHER LOCATIONS

Ali Denham

Dowsing at Blackdown Rings in Devon, Ali noted that geodetic Aquastats become wider, more powerful and ever-changing during the Solstice period. At Blackdown Rings they exhibited an 8-fold configuration of Guy Underwood's surface pattern whereas previously she considered a 4-fold extremely powerful.

Helen Perry

Dowsing around her home near Braintree in Essex, Helen Perry found that the size of the energetic 'circle' around a Blind Spring varied over the Solstice period and it was never a true circle. Generally, the circle was at its widest in the North and East and narrowest to the South and West. At the Solstice Transition period (column 2) the Moon was below the horizon in the NE and the Sun was in the East, having risen around 5 hours previously in the NE. In all other cases the Moon was rising to the East and the Sun was to the South when Helen carried out the dowsing. This suggests that the gravity of the Moon and the Sun could pull the circles around Blind Springs towards them creating elliptical shapes.

The following spreadsheet is an overview of Helen's findings. Her diagrams showing the positions where she placed dowsing flags are in the Appendix. Helen was measuring the outer circle over the Solstice period. However, after a couple of sessions, an inner circle appeared which she also measured. The spreadsheet shows the widest measurements in red and the narrowest measurements in blue.

SESSION 4 SUMMER SOLSTICE - RESULTS

Part 2 – Earth Energy Dragon Currents at the Summer Solstice

NEWSTEAD

The Energy Line that we came across in Abbey woods in the afternoon had a larger core than usual and that felt hot to the touch. Today the core was approx. 20cm in diameter whereas dowsing showed it to have been only 3cm this time last week. Kate measured the Bovis of the Energy Line as 11,000ub compared to 5,000ub exactly 7 days ago. Sian took similar readings and got 15,000ub and 19,000ub respectively. It is not uncommon for individual Dowzers' Bovis readings to differ. The relative increase and decrease between the time frames is the important factor which shows that the Energy Lines seem to be more powerful during the Solstice period.

It therefore seems that the Solstice period causes the cores of the energy lines to increase in size and their power also increases. This may be related to the Energy Lines all coming into harmony over the Solstice period and is something that we can explore further in the Autumn Equinox session in September.

Dragon Current Nodes

As we were only a small team today and the energies had expanded enormously, the dowsing around the Blind Spring took longer than expected and we did not have time to move to the location where we dowsed the earth energies entering the Blind Spring in the last session. We therefore did not get chance to measure the effects on Dragon current Nodes. This is something we can do in the Autumn Equinox session in September.

SESSION 4 SUMMER SOLSTICE - RESULTS

DOWSERS IN OTHER LOCATIONS

Single Energy Current on Mave's Lawn 20th & 21st June 2026

In Mave's garden at Warsop Vale there is a Male Earth Energy Dragon line which is part of a pairing associated with The Equinox Line alignment that runs between Anglesey in Wales the and the Lincolnshire east coast. This Energy Line uses the Blind Spring on Mave's lawn as a recharging point. The Line begins to narrow when it is 3 metres from the centre of the Blind Spring retracting its bands around the core as we found at Newstead in the Earth Energies session. The core starts to dip downwards toward the ground from its normal one metre heigh and It descends into the Blind Spring approx.0.5 metres from the centre where there is a circle of bricks. It then re-emerges the same distance away at the opposite side.

Prior to Moonrise at 11:24am on 20th June 2026 (Harmony Day) the Energy Line was behaving as normal, as described above. However, after the Harmony Day energies formed with an Exclusion Zone around the Blind Spring surrounded by a double-edged cylinder, the Energy Line approached the outer edge of the double-edged cylinder and was deflected left by the wall of energy and had to rise up around 4 metres before descending into the Blind Spring from above. The reverse of this process occurred at the opposite side of the Blind Spring as the Energy Line flowed away after having been cleansed and recharged at the Blind Spring.

This is consistent with what Chris Tonge found to be happening at the Winter Solstice of 2019 when remote dowsing a Node at the Bullring in Caravaca de la Cruz in in Murcia, Spain, which Mave was dowsing on the ground.

DIAGRAM

SESSION 4 SUMMER SOLSTICE - RESULTS

Part 3 – Summer Solstice Solar Noon Transition Period (13:06 at Newstead)

Mave Calvert has found that during 20 the minutes leading up to the exact time Solar Noon, the energies lines and vortices associated with trees go through a transition phase where they reverse polarity, move very quickly, disappear underground for 3 minutes and then return to normal. The net effect is that they have transmuted any non-beneficial energy that they were holding prior to the transition period.

NEWSTEAD

The time of Solar Noon at Newstead was 13:06pm

We started measuring the Solar Noon transition period energies at 12:39 which was 27 minutes before the time of Solar Noon at 13:06pm

At 12:45 Sian reported that the Bovis of the Blind Spring was at 19,000ub,

At 12:48 the Bovis of the Blind Spring had dropped to a maximum of 8,000ub

Mave could feel the geospiral starting to contract inwards

At 12:51 Sian found the Blind Spring was oscillating from 8,000ub clockwise to 19,000ub anticlockwise then crashing

At 12:51 Kate reported that the Primary Halo had pulled in

At 12:53 Sian reported the Bovis dropping rapidly from 17Kub to 16Kub, 15Kub, 14Kub, 13kub, 11kub, 10Kub. 9kub then crashing. Simultaneously she could hear a drop in pitch.

At 12:53 Kate was unable to detect the spiral that rises upwards above the Blind Spring

At 12:56 Kate reported that the geospiral was no longer present

At 13:00 the Blind Spring energies were oscillating between clockwise and anticlockwise rotation at a Bovis of 8,000ub

By 13:02 (4 minutes before Solar Noon) the Primary Halo had pulled in to be half the size it was this morning when we did the Part 1 dowsing and the Bovis of the Blind Spring had risen to 16,000ub. Sian reported that there were now less crashes than there had been previously.

SESSION 4 SUMMER SOLSTICE - RESULTS

Repeating Bovis Cycle and Colour Frequencies

Last time during our Earth Energies dowsing session, Maria managed to establish that there were repeating 2 minute and 30 second cycles, where the Bovis readings gradually ramped up for around 2 minutes followed by a 30 second crash where no readings were detectable. During the “crash” Sian could hear a drop in the pitch of the energies.

This time Mave dowsed the colour frequencies of the Blind Spring and established that during each cycle the colour frequency rose by one band of the spectrum, culminating in the release of Spiritual Gold energies at the time of Solar Noon. Concurrent with this, Sian found that the Blind Spring energies were oscillating between clockwise and anticlockwise.

Last time, Maria had commented that the way the Energy Lines seem to be cleansed and re-energised when dipping underground above the Blind Spring was similar to a washing machine on its spin cycle where it changes its direction of spin from clockwise to counterclockwise and back again several times.

In this case it felt like the gradual ramping up of the colour frequencies concurrent with the cycling of the Bovis and changes of rotation was building up to a culmination of the release of Spiritual Gold energy from the Blind Spring via the upwardly spiralling coil that Sian had found earlier.

Maria Wheatley and the Biogeometrist Ibrahim Karim, point out that Spiritual Gold is not an esoteric colour that is generated by the Sun but a colour that is generated by form, specifically domes and pyramids, The top of the torus feature around Blind Springs if effectively a dome so it is possible that this etheric dome together with the gradual increase in frequency is what can generate this spiritual gold energy at this time of day.

Mave subsequently dowsed the Solar Noon transition period a week later at her home location to see if the colour frequency changes were peculiar to the day of the Solstice. She found that these changes always take place during the Solar Noon transition period which culminates in the Sun reaching its highest daily elevation in the local sky at the time of Solar Noon.

During the latter half of the Solar Noon transition period (from around 14 minutes before Solar Noon to 4 minutes before Solar Noon) Mave found that the Blind Spring energies appeared go through a ten-minute period where they cycled up in colour frequency from the lowest frequency of InfraRed to the highest frequency of Yellow. This took place in 4 cycles of approx. 46 seconds plus a 14 second period of inactivity (crash). In the first cycle the InfraRed colour frequency went through the 7 octaves or frequencies of each colour over periods of 15, 10, 5, 5, 5, 3 and 3 seconds. After a 14 second break the colour changed to Red and the process of gradually increasing the frequency was repeated. In the next cycle the colour Orange was worked through and in the final cycle the colour

SESSION 4 SUMMER SOLSTICE - RESULTS

Yellow. Each time the colour frequency increased slightly, working its way upwards through 48 colour frequencies (4 colours x 7 frequencies) during the 10-minute period. Following this it seemed that the Blind Spring was able to generate Spiritual Gold energy and transmit it up into the Cosmos.

Interestingly, at Newstead Sian had dowsed that the 13 coils/bands of the Geospiral around the Blind Spring alternated between the lowest frequency of InfraRed and the highest frequency of Yellow. This suggests some sort of a link between these phenomena.

This is a working theory that we can build upon during the Solar Noon periods in the upcoming project sessions.

Elemental Beings and the Solar Transition Periods

It is becoming apparent that the Elementals and Devic Beings are involved to a large extent in the Transition periods and may be triggering some of the energetic phenomena that takes place.

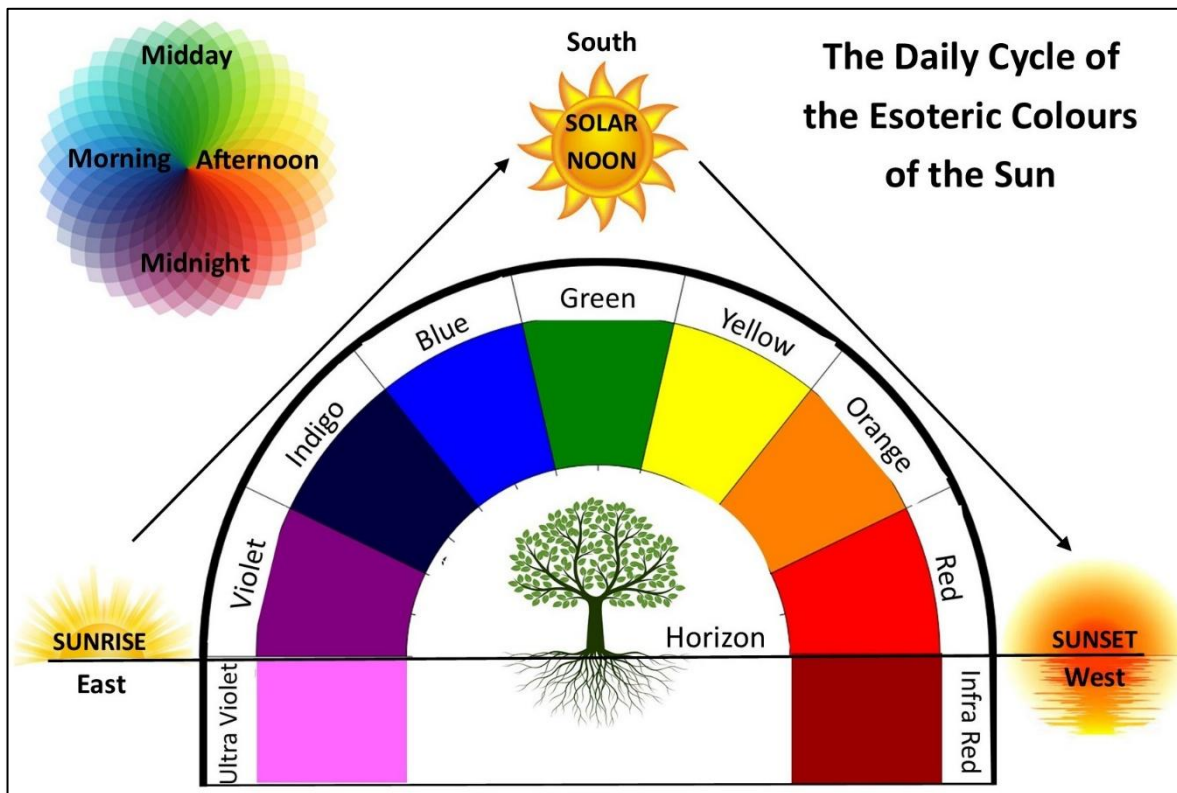

In the book “The Standing Stones Speak” published in 2000, Natasha Hoffman and Hamiton Hill presented information that was read from some Standing stones at Carnac through dowsing. This information was encoded into the stones by the Archangels.

This information states that Elemental Beings known as Gnomes or Goblins are responsible for maintaining the network of Energy Lines and grids around the Earth. They do this by effectively weaving energy from the Sun and other sources into the various Grids and Energy Lines. The information states that different layers the Earth’s energy system are overseen by the different Archangels. In her book “Voices out of Stone” Natasha Hoffman tells us that the straight lines of energy that the BSD refer to as Energy Leys are associated with then Sun and the Archangel Michael whereas the Earth Energy Dragon Lines are associated with the planet Jupiter and the Archangel Zadkiel. Each of the various grids, which are not covered in this project, are associated with different planets and Archangels

The following excerpts are taken from n pages 142-4 of The Standing Stones Speak, “Deva’s handle and protect the incoming energy which is handled as a kind of raw material that has to be converted for use, woven into many strands and vibratory patterns of the life force in order to suit every form of created life. They can close down a site if it is misused or reduce the energy there according to the sensitivity or insensitivity of any human beings present. You might call them Spiritual Technicians, guardians of the power supply from the Sun ... at each sacred site you will find a single Goblin whose function it is to anchor the light energies beamed at your planet from the Sun, It is the rock and mineral energies that make this possible that make this possible at each place, and that is why crystals and minerals contain so much light and colour”

SESSION 4 SUMMER SOLSTICE - RESULTS

Since, High Frequency Colour dowsing focusses on the esoteric colours of the Sun, it would make sense that the Elemental Beings who weave light and colour into the various Energy Lines would work with these colour frequencies.

On Maria Wheatley's Egyptian Pendulum dowsing course in 2021, Mave Calvert and Diane Ellerton learned how the esoteric colours projected at Earth by the Sun vary according to the time of day. Mave produced the diagram above to show the different colours that predominate throughout the day.

Given that the Elemental Beings would seem to be using the esoteric colours of the Sun, perhaps the timings of the Sunrise, Solar Noon and Sunset Transition periods, whilst ostensibly being almost exactly the same, are subtly different in that the Elementals utilise the predominant colour of the Sun at that time. At Sunrise Ultraviolet is predominant, at Solar Noon, Positive Green is predominant and at Sunset InfraRed is predominant.

Similarly, it is possible that the timing of the Mid-Afternoon transition period is purposely timed to be when the esoteric colour of Yellow predominates.

Again, this so something we can perhaps investigate in further project sessions if the Elementals are willing to divulge any more of their secrets. However, we must be very respectful and accept that in some cases we may be denied access to the information if it is not for our highest and greatest good to know.

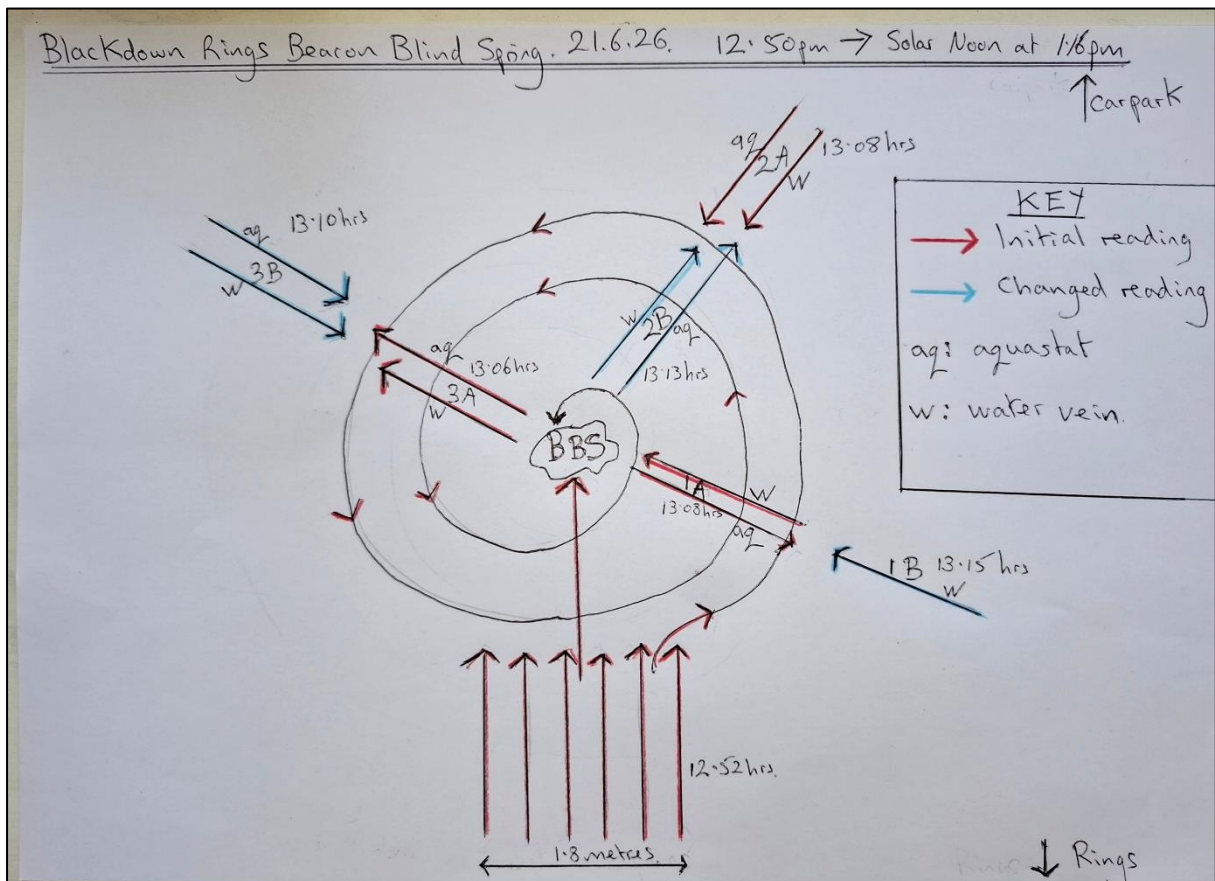

SESSION 4 SUMMER SOLSTICE - RESULTS

DOWSERS IN OTHER LOCATIONS

Ali Denham at Blackdown Rings Beacon Blind Spring. (BBS). 21.6.26.

12.50pm to Solar Noon at 1.16pm/3.16hrs. Solstice at 9.24am.

1. **12.52pm:** A compressed 6x configuration (massive), 1.8 metres width, aquastat approaches the BBS and splits in true Guy Underwood fashion. One half spiralling towards the centre and the other half proceeding straight to the centre.
2. No Holy Lines (and aquastat and water vein/line flowing together) during this solar noon transition period.
3. The single/sub/junction nodes present during the Solstice transition period earlier were not detectable by me.
4. The geospiral was about 2 metre radius at 12.52pm and 2.4 metres radius at 13.25 hrs after solar noon. When I visited on June 7th it was in the region of 100 metres radius.

SESSION 4 SUMMER SOLSTICE - RESULTS

KEY to diagram.

1A: 13.08hrs:	4x configuration aquastat departing the BBS. 1x configuration water line approaching.
1B: 13.15hrs:	2x configuration water line approaching BBS
2A: 13.08 and 13.10 hrs:	2x configuration aquastat approaching BBS. 2x configuration water vein approaching BBS.
2B: 13.13hrs:	4x configuration aquastat departing BBS. 2x configuration water vein departing BBS.
3A: 13.06 hrs:	1x configuration aquastat departing BBS. 1x configuration water vein departing BBS.
3B: 13.10hrs:	1x configuration aquastat approaching BBS. 2x configuration water vein approaching BBS.

SESSION 4 SUMMER SOLSTICE - RESULTS

Part 4 – Tree Energies and Capped Vortices at the Summer Solstice

NEWSTEAD

Solstice Mandala

We were guided to use the period between the end of the lunch break and the start of the mid-afternoon transition period to make a Solstice Mandala in the woods and sing some blessing songs around it for the trees, water, and the Elemental and Nature Beings.

It felt as if these unseen Beings had been observing us throughout the previous project sessions here at Newstead and were wanting to impress upon us their role in the Earth's self-cleansing and healing system.

Speaking about Elemental Beings on page 138 of The Standing Stone Speak book, Natasha Hoffman writes "They can be helped ... by your acknowledgement of their presence and in the celebration with them of the seasonal cycles, especially on the Solstice days when certain places on earth are empowered with a regenerative input of vitality"

Tree Energies

During the morning dowsing session, Kate measured the energy field of a Cedar Tree in the field where the Blind Spring was. The readings were taken between 12:05 and 12:10

The energy field or aura was 58 paces today whereas dowsing back in time showed that it was only 24 paces wide 7n days ago. Dowsing suggested that 58 paces was its maximum width and it never gets wider than this.

Capped Vortices

As we were only a small team, we did not get chance to measure the effects on Capped Vortices so this is something we can concentrate more on in September for Session 8 – Autumn Equinox.

SESSION 4 SUMMER SOLSTICE - RESULTS

DOWSERS IN OTHER LOCATIONS

Ali Denham at Blackdown Rings Beacon Blind Spring, (BBS). 21.6.26.

Solstice Afternoon 1.43 – 4.09pm.

1.42pm: No aquastats feeding the BBS. They were all emerging/discharging.

0A. 1.39 – 2.50 pm: 5x configuration aquastat departing BBS

0B. 4 pm: 6x configuration aquastat approaching BBs and only slightly narrower than at 12.52pm.

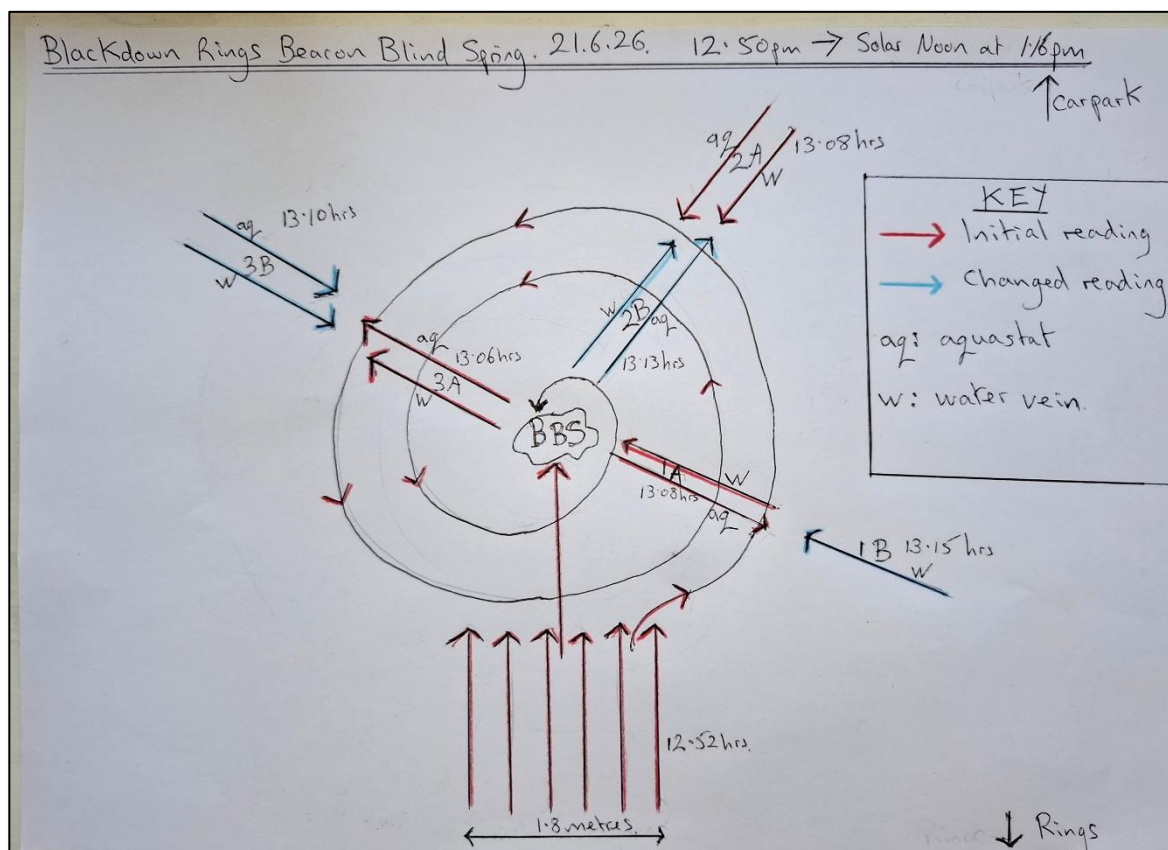

1A. 1.42 pm: 1x configuration aquastat and
1x configuration water line flowing separately. (Not a Holy Line)

1B. 4.08 pm: Holy Line. 2x configuration aquastat and 2x configuration water line flowing together.

2A. 1.33 – 1.37pm: 1x configuration aquastat and
2x configuration water line flowing separately.

2B. 4.05 pm: Holy line. 1x configuration aquastat and
1x configuration water line flowing together.

3B. 4.09 pm: Holy Line. 2x configuration aquastat and
1x configuration water line flowing together.

SESSION 4 SUMMER SOLSTICE - RESULTS

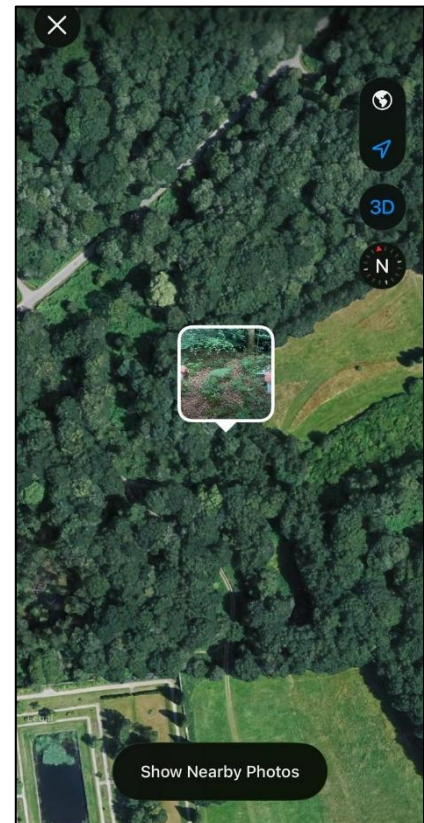

Part 5 - Mid-Afternoon Transition Period

The Mid-afternoon transition period is a 12-minute period between 3pm and 3:15pm BST when Mave can no longer Dowse the electromagnetic components of Energy Lines and Vortices in their usual positions above ground with her hands. Her Dowsing suggests that they have gone underground

NEWSTEAD

Once we had made our Mandala, we asked our Dowsing Rods to show us a place where we could discover more about the mid-afternoon transition period. We were then taken on a roundabout route through the woods where we became rather disoriented. On the way the Rods frequently pointed into areas of thick ferns and bracken that were too dense for us to safely access in our summer clothing. Eventually we were taken to a remote area of Abbey woods where there were trees, ferns, bracken and an Energy Line (see location on image on the right).

We arrived there around 14:53. It felt like this was an area frequented by Elemental Brings and Nature Sprits, and we continued to feel a little disoriented, struggling to get our bearings. It later transpired that we were only just over 150 metres north of the formal gardens of Newstead Abbey.

We ensured that we were very respectful in this area and only dowsed for what we allowed to, accepting that some things were.

At 14:57 Mave could still detect the Energy Line above ground. However, when she placed her hand over the top of the core her hand started to shake. Shortly after that the line disappeared and Mave could no longer dowse it above ground. By 15:18 the Line was back to full power.

Kate started to ask informational dowsing (yes/no questions with her Rods). When we asked whether the Elemental Beings were working with the line to cleanse it the Rods gave a positive response. It seemed that they were “ingesting” energy that is non-beneficial to humans but beneficial to them because they exist at a completely

SESSION 4 SUMMER SOLSTICE - RESULTS

different vibrational frequency to us. This is similar to the process whereby trees ingest Carbon Dioxide and give out Oxygen. This feeding process appears to cleanse the lowest frequencies of the Lines and Vortices so when they reappear above ground, they are cleansed and recharged.

Having asked whether the Energy Lines and Vortices go up or down when they seem to disappear, we eventually established that they are taken into the Elemental Realm, which makes sense if it is these beings who are working with them at this time as part of the Earth's self-cleansing and healing process.

It seems that this is more or less the same process that happens for 3 minutes right at the end of the Solar and Lunar transition periods. The difference seems to be that only the underground (earth) Elementals are involved in the Mid-Afternoon transition period. Whereas all Elementals including the overground ones i.e., those associated with air, fire and water, take part in the Solar and Lunar transition periods. These Beings are effectively "feeding" during these transition periods.

The Trees Elementals seem to be involved in this process as well, but we got a negative response when asking if the mycelium network was involved.

Again, we may be able to build upon these theories in upcoming project sessions if the unseen beings are willing to divulge more information about their activities.

SESSION 4 SUMMER SOLSTICE - RESULTS

APPENDIX 1 – DATA

SESSION 4 SUMMER SOLSTICE - RESULTS

Ali Denham – Summer Solstice at Blackdown Rings 21/6/26:

Blackdown Rings, near Loddiswell, South Devon. June 21st, 2026. Solstice at 9.24am. Ali Denham.

Following my previous visit to Blackdown Rings on June 7th, I have learnt that the Blind Spring that I dowsed there is a Mother Blind Spring that feeds a network of vortices (no incoming water veins) and indeed is a Beacon Blind Spring. (BBS)

The research done by Gordon Field shows that Beacon Trees are associated with a nearby Beacon Spring or Beacon Blind Spring, and I have found the energy signature relating to a Beacon Blind Spring at Blackdown Rings. The little animal that made its burrow at the centre of this Beacon Spring is still there, with fresh earth showing. (see Guy Underwood, “The Pattern of the Past” Chapter 6 p.60 for more details on the beneficial properties of Blind Springs). Goodness knows what the little animal in the burrow made of what follows. I also identified the associated Beacon Tree outside the Blackdown Rings enclosure. An Ash tree.

SESSION 4 SUMMER SOLSTICE - RESULTS

The Summer Solstice transition period.

I began dowsing at 8.20am and it took me a good 20 minutes to get the measure of what was happening.

On my previous visit a 6-fold aquastat approached the Beacon Spring from the direction of the Rings, which in itself was bigger than I had encountered before. Various Holy Lines, water lines and aquastats then departed from BBS.

Now, an hour before Summer Solstice there was a great outpouring of aquastatic energy from the BBS. The direction of flow had reversed, probably during the harmony period the day before. There was now a massive 8-fold aquastat (8x aquastat configurations) emerging from the BBS. I couldn't detect any other geodetic line approaching it.

The direction of flow reversed again at 8.48 am, now approaching the centre of the BBS, and I began to experience a pressure headache and ears, with ears popping, and the 3 coil geospiral was contracting. I moved about 20 metres away from the centre of the BBS.

By 9.02am the pressured head and ears reached me again made me realise that I had to get out! I had an inkling that the surrounding torus would expand rapidly so decided to monitor the torus by way of dowsing Solstice energies whilst running away from the focal point.

At the end of my dowsing day at 4.28pm, I found that the torus was only 270°. A large arc. It emerged from one patch of bare earth and returned to earth at the BBS. During the morning Solstice transition period I assumed that I was dowsing the edge of an expanding circle, but I didn't check that aspect. I only observed that the torus 'circle' was asymmetrical.

I took Bovis and HFC readings afterwards, at the times I had noted whilst trying to keep track of a rapidly expanding torus. I therefore probably missed some processes by not allowing for the full cycle of a reading over several minutes.

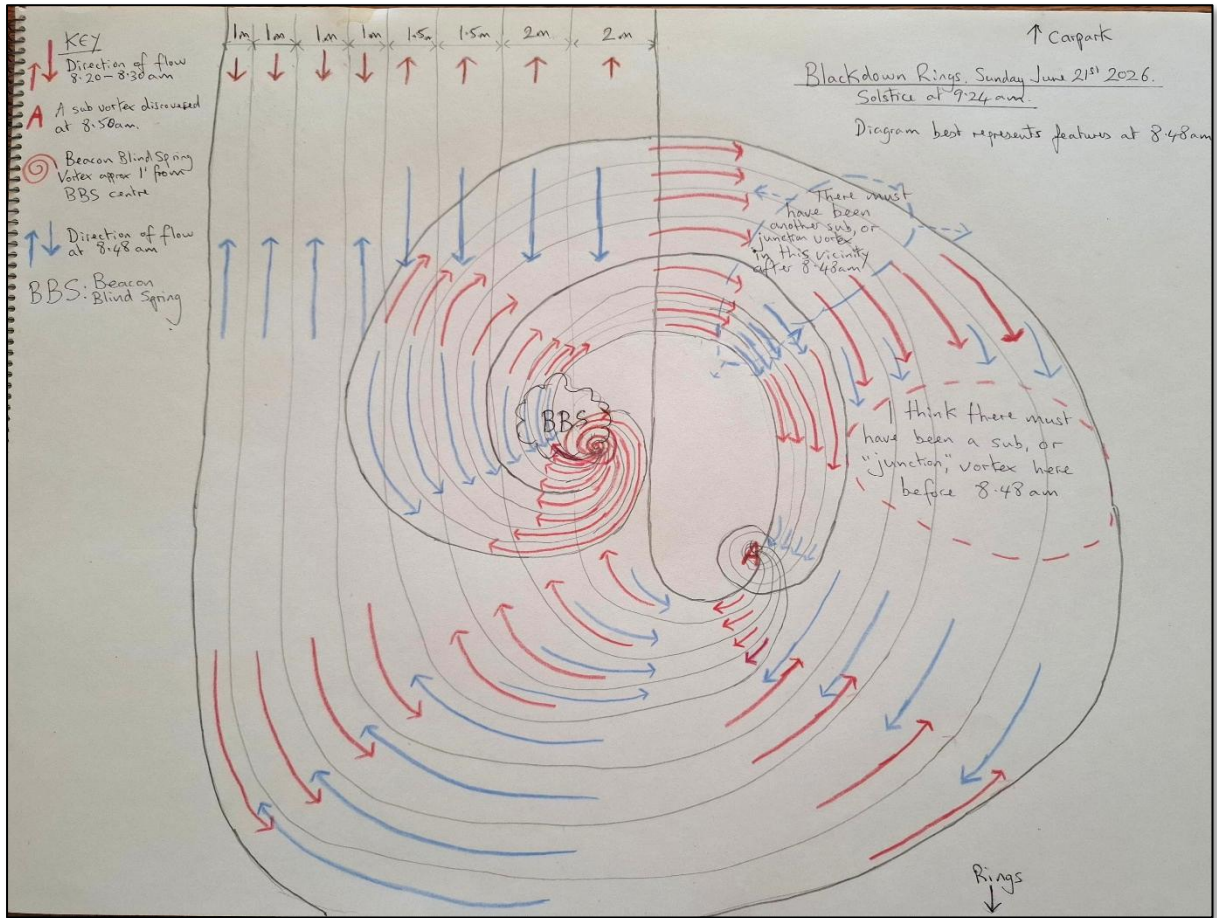

SESSION 4 SUMMER SOLSTICE - RESULTS

Dowsing the BBS torus. TIME:	Radius (One Ali pace = 70cms from toe to toe)	Height	Dowsed remotely afterwards HFC	Dowsed remotely afterwards. Bovis.
8.30am	23 paces towards Rings 25 paces towards carpark.		Edge: Went through all colours. Mag. 4c Centre: Spiritual Gold. Elec. 4c	Edge: 15-50K rising

Note the animal burrow at the centre of the BBS.

Flows 2 and 3 are Holy Lines, with an aquastat and water line flowing together

Right: At 4.21pm on 21.6.26 the torus surrounding the BBS was three quarters of a circle. It was emerging from the bare patch of earth in the foreground and went to ground at the centre of the BBS, itself a bare patch of earth from an animal burrowing.

SESSION 4 SUMMER SOLSTICE - RESULTS

Helen Perry – Summer Solstice in Essex 20/6/26 to 22/6/26:

Findings: H. Perry. Essex 20th – 22nd June 2026

Solar noon time differed slightly in Essex from Newstead.

Location between Chelmsford, Braintree and Dunmow www.geoessex.org.uk

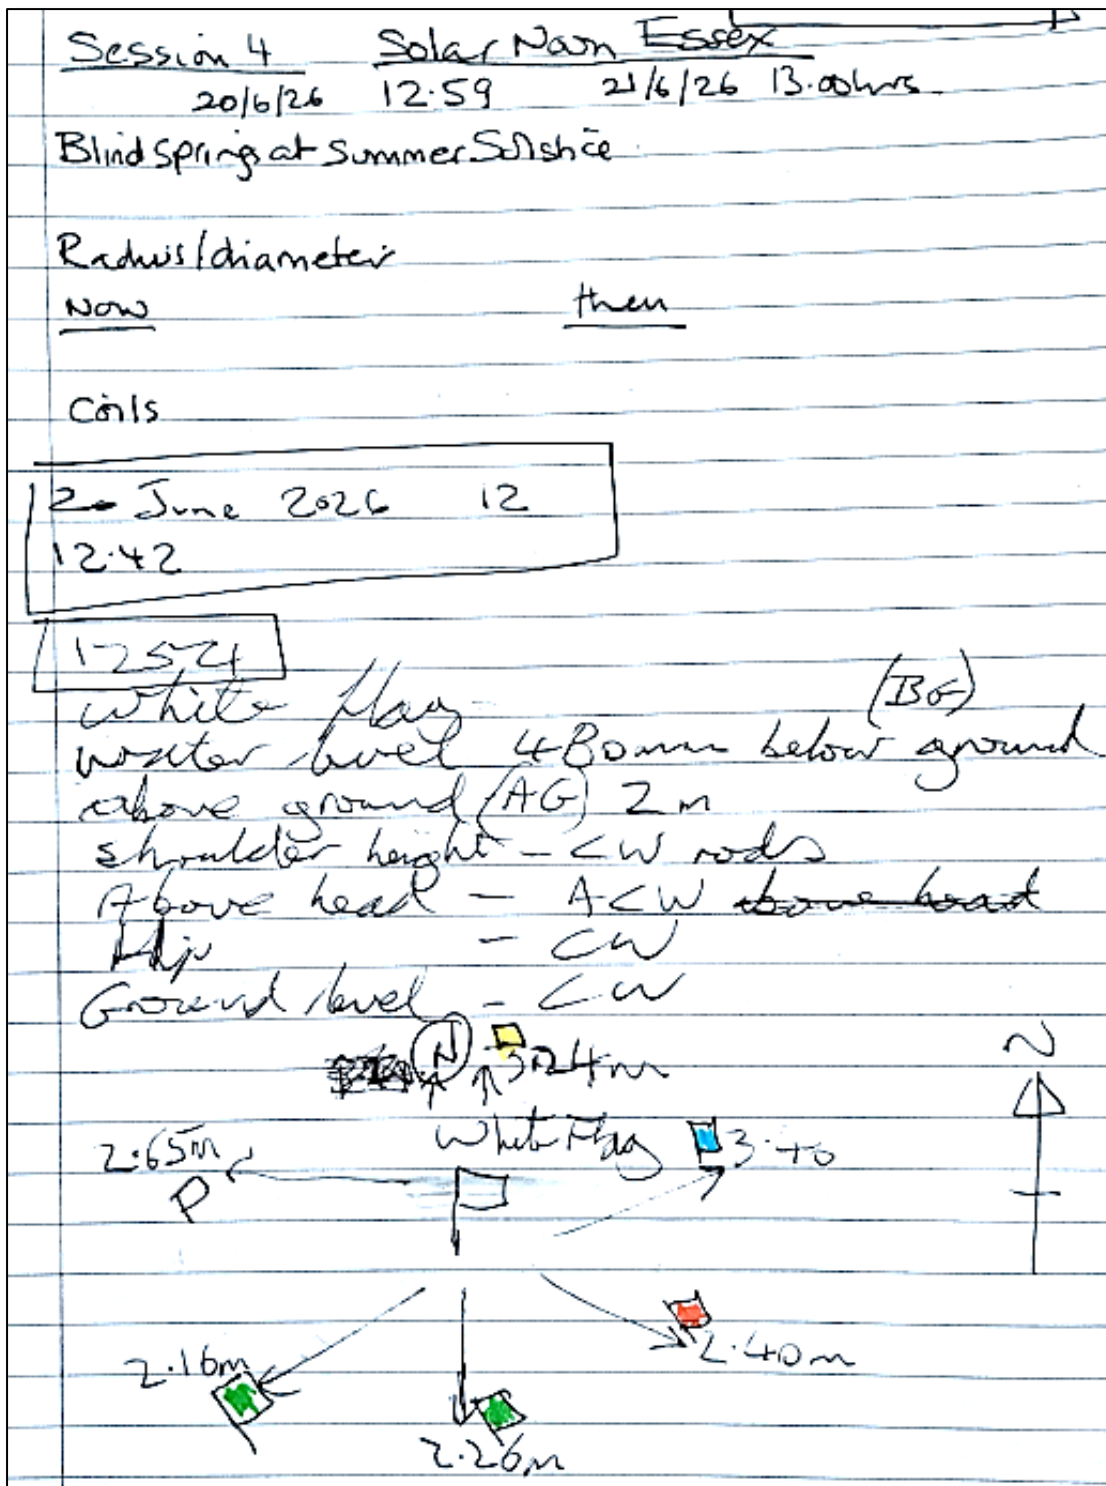

What3Words: ///flexibly.points.newsprint

Same location at various times in a heatwave with light wind ruffling note paper while bitten by deer flies and gnats and feeling woozy at times. Dowsed and could stay in 7 mins at a time. That's dedication to the cause :) Written findings and measurement make to sense to me so maybe ignore those. I blame the heat ;) but the changes in the energy field I found amazing. Different findings and reactions to those sent previously.

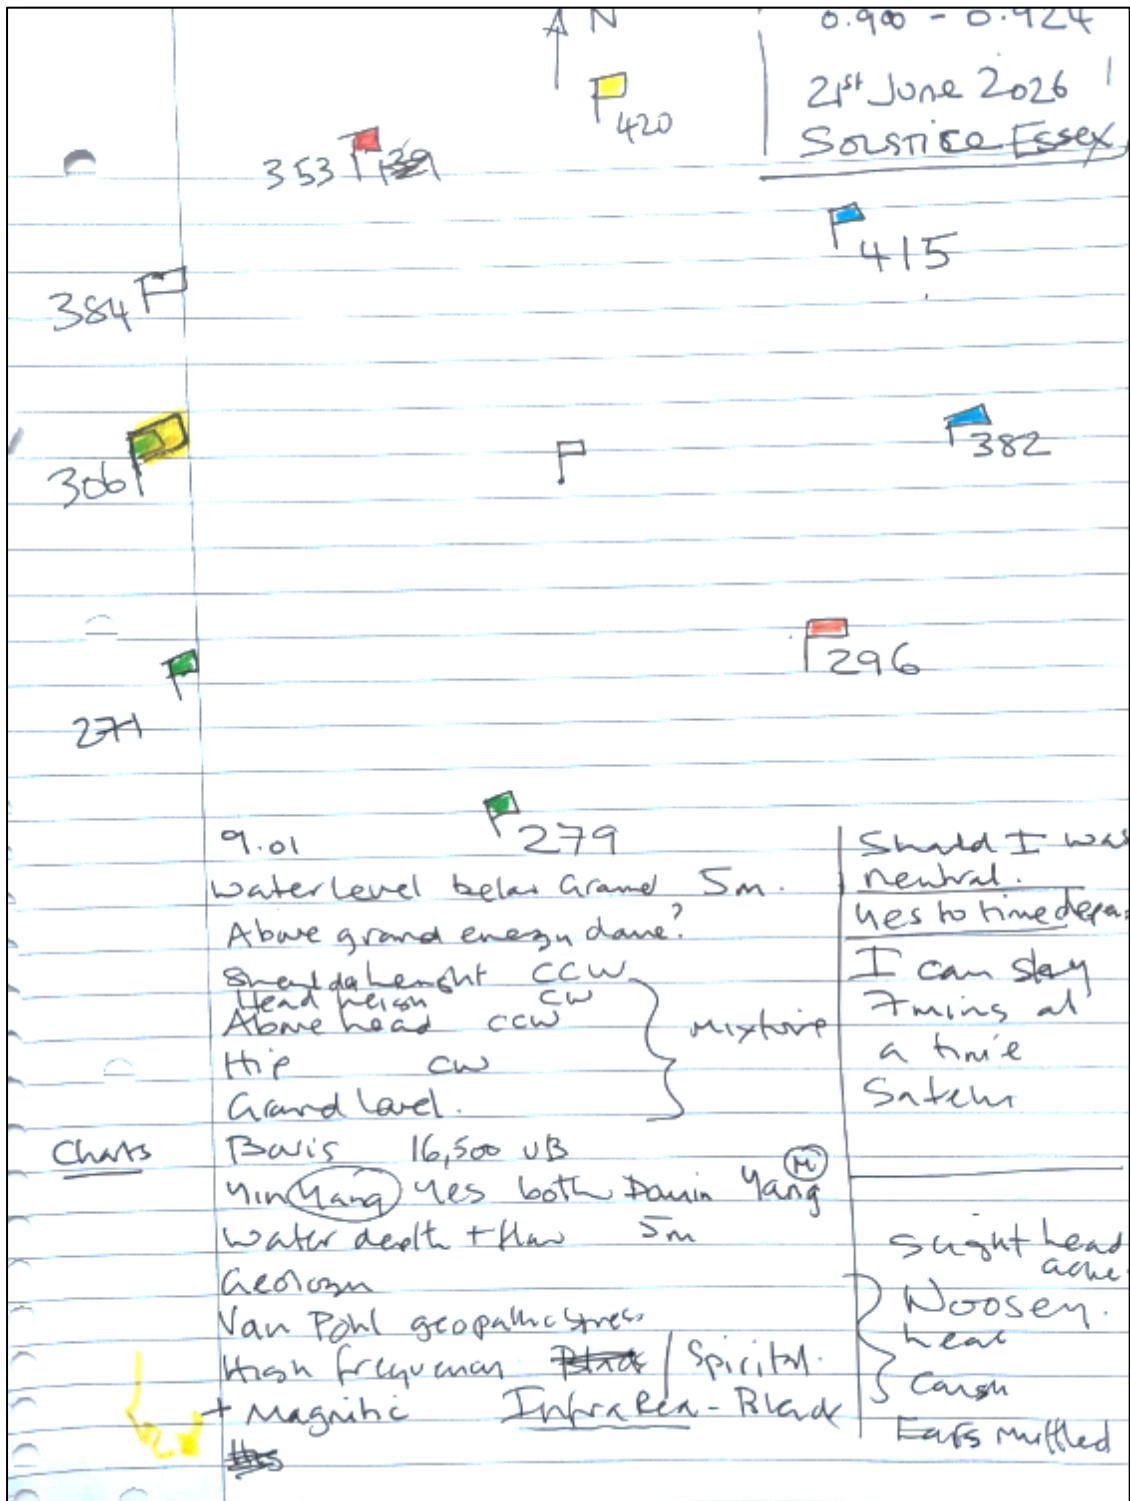

NB: Photos of area were taken earlier in the year and ref only.

APPENDIX 2 – EARTH ENERGIES & ELEMENTAL BEINGS

DO YOU THINK LEY LINES ARE CONSCIOUS?

TRANSCRIPTION OF THE APRIL 2023 YOUTUBE VIDEO “DO YOU THINK LEY LINES ARE CONSCIOUS?” FROM THE “THE JOSEPH COMMUNICATIONS” YOUTUBE CHANNEL

(click the image to listen to the YouTube)

Tony: Hello, this is Tony and Michael from The Sanctuary of Healing answering your questions. I have a question here from my friend Chris Tonge. I see him every Friday on our weekly meditations.

Michael: Hi Chris

Tony: He's a Dowser so the question is a little bit about Dowsing. Chris, our policy is not to mention other people's works or other people's books, so I've taken out a little bit of that, but I am getting to the core of your question, I think and I hope. Here we go:

Chris: I am really enjoying the recent introduction of the question and answer sessions, and find them a really helpful extension of the Joseph Communications. As you know, I am a Dowser with a special interest in what Dowsers usually call Earth Energies. I and other Dowsers are getting an increasing sense that some of the "Energy Lines" we dowse have a consciousness and a mission to help life on earth. The Energy Lines and Ley Lines are mentioned only briefly in the Joseph books, so I wonder whether with the help of Michael more guidance can be revealed. The question which is much on my mind at the moment is, "What is the true nature of the energy/consciousness flows and how can we best work with them?"

SESSION 4 SUMMER SOLSTICE - RESULTS

Michael: In order to answer that I have to tune in once again to a member of the soul group who is impressing me with the fact that the “Energy Lines”, the Ley Lines, are more connected with Deva activity than they are with human activity. In the normal course of things on a planet the Devas are the Architects, if you like, of the landscape that we enact our lives against. Devas use the energy lines to connect with each other, to consult about the form that their creation should take and then to give and to draw energies dependant on what Deva activity in a certain area of the planet wishes to accomplish. It could be that they are putting their energies in to creating a new expression of life and they want to test out that expression of life. There are groups of Devas that are located along the Ley Lines at points and they use those Ley Lines to communicate with the planet and also to communicate with each other. There is a firing backwards and forwards of communication and instruction and questioning and information regarding the maintaining of the physical manifestation of creation on a planet and whether that should be enhanced, altered, whether certain aspects should go back to the nothingness in that the molecules that form that particular aspect of creation are pulled apart and not neutralised, but able to be used as something else. There is much communication that goes on in the normal course of things along Ley Lines. You will find that along Ley Lines there are placed by humanity certain objects, certain edifices, that were known to allow communication between Devas and between human souls. There were certain points in our history at which we would respect Deva activity, respect the workings of the Ley Lines, respect the energies of the planet and would communicate, when moved to do so, with the Devas at certain points in order to maintain a balance of creation and ask whether certain actions would harm creation, would enhance creation or were permitted by the Architects of the planet, the Devas.

Michael: I think Chris asked what can we do you might not like the answer.

Tony: How can we best work with them?

Michael: I’m being impressed that the way we can best work with them is to 1) respect them, which I know that you will do, but 2) for the most part, unless called to do so, keep away because when we work with the Ley Lines, to the best of our intentions, within those intentions lie the pollutions of The Fall. So we are infusing to a lesser or greater extent, dependant on how each of us is influenced by our earthly personality, we are infusing those Ley Lines with a degree of what is wrong here rather than what we could do to put it right. You and I, Tony, have come across Deva activity where we have been told in no uncertain terms, GO AWAY! Do not encroach on this area of land, do not interfere with what we are doing here, this is our area, please don’t enter it. I think we have to acknowledge that there are greater forces that maintain reality around us than just humanity, and those forces, in order to restore the planet to what it should be, should be allowed to do their work as uninterrupted and as freely as they possibly can. I’m being told that if we want to help with regard to Ley Lines, we should keep people

SESSION 4 SUMMER SOLSTICE - RESULTS

away from them. We should establish in our thinking, in the vibrations we send out, protection around the Ley Lines. If you were to see a Ley Line as a line of energy, if you are working as a group, surround that Ley Line with a pipe of positive energy that encapsulates it. By doing that you keep away the vibrations that keep that Ley Line functioning at a low level of activity and you allow the Devas that work with the Ley Lines, to restore the Ley Lines and to use them for their original purpose which was to communicate with the planet, with the animal lives that they have jurisdiction over and with each other to maintain the status quo spiritually speaking.

Michael: That, I am afraid, in the end of that communication, because I can't maintain it any longer. I hope we have got sufficient information, Chris.

Tony: Chris, again thank you for the question, that was a surprise. We didn't expect intervention from up above, if you like. That is the honest answer.

Michael: And the communicator, by the way, was Joseph.
