NEWSTEAD DOWSING RESEARCH PROJECT 2026 – SESSION 3

PROJECT OVERVIEW

The aim of this dowsing research project is to explore different aspects of tree, water, and earth energies and to investigate whether the different aspects are related, as well as how they are affected by the Solar Noon transition period (the 20-minute period leading up to Solar Noon) and the mid-afternoon transition period (3pm to 3:15pm).

The project at Newstead will be led by Mave Calvert. Other individuals and groups have expressed interest in carrying out parallel research in other locations, which will allow us to compare our findings.

The Newstead project will comprise 8 sessions:

1	Saturday 11 th April 2026	Tree Energies
2	Saturday 9 th May 2026	Water Energies
3	Saturday 13th June 2026	Earth Energies
4	Sunday 21 ^s June 2026	Summer Solstice Energies
5	Saturday 11 th July 2026	Beacon Tree Energies
6	Saturday 8 th August 2026	Landscape Pentagram Energies
7	Saturday 12 th September 2026	New Moon Energies
8	Wednesday 23 rd September 2026	Autumn Equinox Energies

ASSOCIATED INFORMATION

All the project documentation is available in PDF format on Mave's website.

As well as the Project Summary and details of each individual session, there is a document containing the pendulum dowsing charts that you may wish to use and a document containing information about the location, geology and a brief history of the Newstead area:

[Research Project \(List\) | The Sherwood Dowser](#)

The Appendices to this document give more information on the structure of the various things that we will be dowsing along with Mave's take on these, which sometimes differs because her self-taught deviceless dowsing techniques have allowed her to approach these things a more holistic 3D context than the conventional tool Dowser.

As this is a research project, please remain open-minded and go with your own findings even if they are unexpected and different to what other Dowzers find. That's how we learn and discover new things!

NEWSTEAD DOWSING RESEARCH PROJECT 2026 – SESSION 3

SESSION 3 OVERVIEW – EARTH ENERGIES

The aim of this session is to locate the earth energy dragon currents that flow through the area and explore their structure in terms of the number of bands that they are comprised of. We will take Bovis readings for each band and explore its width, colour frequency and Yin/Yang polarity, We will also take readings of how much beneficial/detrimental energy these flows are carrying and see whether this is affected by the Solar Noon and mid-afternoon transition periods. Additionally, we will start to explore how they link in with the trees, blind springs and capped vortices that we have dowsed previously.

For Dowsters joining in person:

Date: Saturday 13TH June 2026

Venue: Newstead Abbey, Ravenshead, Nottinghamshire NG15 8NA

Meet at the café between 10:15am and 10:30am to get to know each other and discuss what we will be dowsing today. We will aim to start dowsing in our chosen location by 11:15am. We will dowse various earth energies and then monitor them during today's Solar Noon transition period between 12:44 and 13:04.

Lunch break will be from 13:15 to 14:15. You can bring a picnic or eat in the café.

After lunch we will dowsing in a different location. We will then monitor these energies during the mid-afternoon transition period from 15:00 to 15:15. After that we can return to the café for a final cuppa and to discuss the day's dowsing.

Please bring a notebook and pen to write down your observations and email a copy of your notes to me afterwards so I can collate our findings them prior to the next session. I will have some pendulum dowsing charts with me. However, if you wish to print off and laminate your own copies you will find them at the end of this document.

For Dowsters working in different locations:

Again, this session is not date critical, so You can either join in on the same date as the Newstead Dowsters or on a different date. Please make notes of your findings with dates and times so we can compare them with what the Newstead group find. If you are working alone, you may not be able to do all the experiments, so just do what you can. You can always repeat them another day focussing on a different aspect if you wish.

The details of a remote dowsing opportunity that involves earth energies which you can take part in from home are in a separate document on the research page of my website.

Note: Please check the time of Solar Noon in the location where you are dowsing and work with that rather than the timings given for Newstead. The exact time of Solar Noon depends on the Longitude of your location and changes over time.

NEWSTEAD DOWSING RESEARCH PROJECT 2026 – SESSION 3

DOWSING INVESTIGATIONS FOR EARTH ENERGIES

You may not be able to complete all the investigations in a single session, so just do what you can. We will then collate the results together to build up a bigger picture.

Part 1 – Earth Energy Dragon Currents

Locate an earth energy dragon current. Start by taking baseline readings of its energies and then take more readings during the experiments

Dragon Currents - Baseline readings

How wide is the Dragon current from edge to edge when dowsed at ground level? For the current as a whole use the pendulum dowsing charts to ascertain its colour frequency, Bovis reading, direction of flow, % Yin/Yang and % of beneficial and non-beneficial energy that it is carrying.

Locate the central core of the dragon current. Dowse its width at ground level and then find its height above the ground and ascertain its diameter. Does it run horizontally above the ground always keeping the same height?

Does the Dragon current have bands within it when dowsed at ground level? How many bands? Mark them out on the ground and for each one ascertain its width, colour frequency, Bovis reading, direction of flow, % Yin/Yang and % of beneficial and non-beneficial energy within it.

Dowse upwards from ground level from the edge of each band. Does the band go straight upwards vertically or does it curve? If it is curving, which way does it curve and does the direction of curvature change at any point? Do the bands feel like they are concentric circles or tubes around the core of the line?

Are there any similarities between the bands that are on opposite sides of the central core of the line?

Dragon Currents - Experiments

Do any aspects of the Dragon current's energy expand when Dowser(s) interact with it?

How is the energy field of the line as a whole and individual bands affected by various types of music being played to it? Try both harmonious and inharmonious music (e.g. Tim Wheater's Gayatri Mantra then Motorhead) and re-check the baseline readings. You can also experiment with singing, chanting, drumming and the playing of singing bowls and/or tuning forks if they are available.

Place a crystal in the centre of the line and see if this affects the line. Make a note of what type of crystal(s) you use as darker coloured crystals often have a different effect to lighter ones when this experiment is done with the human aura. Also try placing the crystal on individual bands.

NEWSTEAD DOWSING RESEARCH PROJECT 2026 – SESSION 3

Part 2 – Single Current Nodes

Locate a place where the Dragon current descends into the ground and re-emerges, but where no other Dragon currents are involved. You can do this by following the central core of the Dragon current until it dips towards the ground. Ensure the Vortex is in balance, and it is safe for you to interact with it.

Single Current Nodes - Baseline readings

Note the location of this Vortex and whether there are any physical features in it such as a tree, a stone, a monument, or whether it is on open ground.

Is this a Capped Vortex or an Infinite Vortex? Is there a Blind Spring below it? If not, is there any underground water below it? If there is a Blind Spring beneath it could its energies form the top of an energetic torus?

Does the Dragon current narrow in width as it approaches the Vortex and increase in width after it re-emerges and leaves? If so, do all the bands and the central core narrow, or just some of them. Does the number of bands reduce/increase with distance? At what distance from the Node is the Dragon current back to its full width?

Follow the central core of the Dragon current at one metre above ground level to determine at what point it starts to dip down towards the ground and how quickly it descends before disappearing into the Vortex. Locate it re-emerging on the other side and determine how quickly the core rises back up to its normal one metre height, noting the distances.

Take baseline readings of the current before it descends into the Vortex and when it re-emerges to ascertain whether the Bovis, Colour Frequency, and % of (non) beneficial energy that it is carrying has changed.

Use the pendulum dowsing charts to ascertain how far underground the Dragon current descends before re-emerging. Compare this with how far below ground level water is present, and what type of water it is.

NEWSTEAD DOWSING RESEARCH PROJECT 2026 – SESSION 3

Part 3 - Solar Transition Period (12:44pm to 13:04pm at Newstead)

Dowse for a suitable place for you to stand during to monitor the Dragon current during this period. Depending on your level of sensitivity, you may choose to take readings during this period or simply stand back and get an intuitive feeling for what the energy is doing from a distance,

Keep re-checking the baseline readings of colour frequency, Bovis, Yin/Yang, % beneficial energy and direction of the energy flow of the Dragon current throughout the 20-minute transition period noting down the exact time of each observation.

You may notice a change in polarity at the start of the period and a reversal back to the original polarity at the end. You may also find that the Dragon current starts to spin very fast, expanding and contracting its bands, at some point during this period and may disappear underground for a few minutes towards the end.

When the Solar Transition period has ended at 13:04 take another set of baseline readings for comparison.

Note: Since this is only a 20-minute window and things can change very fast, you may not be able to check everything on the list, so just do what you can. As the energy starts to move faster the Bovis readings and the frequency of the colour(s) within it are likely to increase so just note down whatever reading you get even if it seems irrational. If at any time you feel uncomfortable during the transition period stop dowsing and move away from the area.

NEWSTEAD DOWSING RESEARCH PROJECT 2026 – SESSION 3

Part 4 – Earth Energy Dragon Current Nodes

Locate a place where the Earth Energy Dragon current Nodes with a second Earth Energy Dragon current. Take baseline readings for the second current to ascertain if it is of the opposite polarity and part of a pair or just two different currents that happen to cross here.

Note: The Node point at Newstead is in an area where a lot of visitors frequent, so we will only be able to do a small amount of dowsing here. If you are working in a different location and are able to find a Node in a quiet place, then you can repeat the experiments from part 2 for both Dragon currents.

Make a note the location of the Node and whether there are any physical features there such as a tree, a stone, a monument, or whether it is on open ground.

Is there a Blind Spring beneath the Node? If so, check how far below ground the top of the vertically rising water dome is.

Follow the path of each Dragon current into and out of the Node and draw a plan in your notebook marking at what point on the ground they descend and re-emerge.

Use the pendulum dowsing charts to ascertain how far underground the Dragon currents descend before re-emerging. Compare this with how far below ground level there is water present, and what type of water it is (primary/secondary)

NEWSTEAD DOWSING RESEARCH PROJECT 2026 – SESSION 3

Part 5 - Mid Afternoon Transition Period (approx. 3pm to 3:15pm in all locations)

Remain at the location of the Node that we dowsed in Part 4 to check whether you can still detect the Dragon current during this 12-minute transition period. Keep re-checking the Bovis reading and note down the exact time of each observation.

Can you still detect both the Dragon currents above ground level?

If you can still detect the Dragon currents, has the overall width decreased and can you still detect all the tubes/bands or just the central core? Have the Bovis readings decreased? Do they still descend into the Node?

If you cannot detect the Dragon currents above ground level, use informational dowsing and/or pendulum charts to check if they are below ground and if so, at what depth. Compare this to the depth of any underground water below the location.

Are there any similarities in how the Dragon current was affected towards the end of the Solar Noon transition period?

NEWSTEAD DOWSING RESEARCH PROJECT 2026 – SESSION 3

APPENDIX 1 – DOWSING GLOSSARY DEFINITIONS

These are some of the BSD accepted definitions for earth energy dowsing terms from the British Glossary of Dowsing terms on the britishdowsing.net website.

[Glossary of Dowsing terms A-C - British Dowsing](#)

Note: Since this is a research project, our findings may or may not be in line with the entirety of these definitions so please keep an open mind.

Dragon Line/ Current

Alternative term describing one of a polarised pair of highly energetic intertwined earth energy currents, usually accompanying a long-distance ley such as the Michael Line.

Earth Energies

Different from the term 'Earth Energy' in that it generically refers to *all* energies that can be dowsed on the surface of the earth. The source of these energies may be outside the earth or in specific parts of the earth; thus, the term applies to solar, lunar, planetary and other cosmic influences affecting the earth as well as those arising from terrestrial features. Like the term 'Ley Line', it is a poorly chosen definition that has now passed into common usage, so it seems that we are stuck with it.

Earth Energy

A naturally-occurring field of subtle energy relating to or emanating from the Earth as a whole.

Energy Field

An area of energy around an object which is specific to that object and being transmitted by it. This energy can be detected by dowsing or at certain frequencies by instruments. Another term for energy field is 'aura' although this is generally associated with the human energy field.

Energy Ley

Lines of dowseable energy which generally run straight, are 2-3m (6-9ft) wide at their central core (but can be much wider) and often have further bands or edges to either side. Influenced both in width and strength by lunar and solar cycles. They are often found at what are called sacred sites but may also be encountered independently. They usually start or terminate at a Power Centre.

Whilst energy leys are considered to be natural energy phenomena it is also thought that they can be created by the formation of structures and in some cases have been observed to appear after a structure is built and are drawn to the site as the result of human activity of a spiritual nature.

NEWSTEAD DOWSING RESEARCH PROJECT 2026 – SESSION 3

Researcher R Duff theorises that some energy leys are formed by ultra-low frequency sonic resonances created by the rotation of the Earth's iron core. He classified several distinct types of lines, which he divides into categories of 'electromagnetic' and 'sonic'. However, as not every dowser finds the same results this viewpoint is not universally accepted.

Energy Line

The direction energy takes when moving. It may be straight or curved, in several dimensions and be composed of one or more different types of energies, i.e. negative, positive or neutral. Energy lines can be found at standing stones and ancient sites but are a general feature in all energy fields.

Energy Source

The object creating the energy field within which the particular energy is found. This could be a tree, a mountain, a river, a stone or any other feature on the earth, or the earth as a whole. If the energy is of cosmic origin, then the source would be external to the earth. There is a line of opinion that it is the energy field that manifests the physical object and not the other way around (Walter Russell).

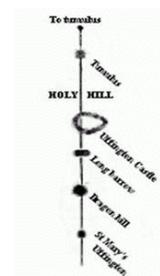

Flow Direction

The direction of movement of energy along a dowseable energy line.

Ley

A significant alignment of sacred and secular sites across a landscape, generally inter-visible. The minimum number of aligned sites to qualify as a ley is five. The term was first used by Alfred Watkins in 1921. Watkins never used the term 'ley line'.

There is no associated energy line indicated by the term 'ley' as Watkins described it, and therefore it is not to be confused with an Energy Ley.

Ley Line

The term used (incorrectly) by many dowsers to describe an energy ley, a straight line of energy that may link ancient sites where it coincides with a visual ley. It is easily confused with the term ley, which is a purely visual alignment, and therefore its use is not recommended by dowsers. It is also commonly used indiscriminately by the public in general. Alfred Watkins never used the term 'ley line'.

NEWSTEAD DOWSING RESEARCH PROJECT 2026 – SESSION 3

Node

- a) A node is found at the intersection of two or more energy lines, particularly serpent lines/ dragon currents, giving a highly charged point of energy, often associated with a power centre. Usually, the lines will narrow to a point at the node.
- b) Seven nodes are to be found on most ancient standing stones. Five are above ground level and two are on the section of the stone below ground level. They are likened to the seven major chakras of the human body. Nodes can be found at many places other than standing stones.

Power Centre

A place where there is an intensity of beneficial energy and a meeting point of yang and yin earth energies. Power centres are associated with blind springs that have at least one energy ley crossing them and are found at most ancient sacred sites, frequently accompanied by radials and/or a geospiral. However, they can also be found elsewhere. Power centres are generally considered to be places suitable for spiritual enlightenment and healing. Dowsers using a sleeved L-rod have noted that when directly over a power centre the rod will rotate through 360 degrees.

Serpent Line

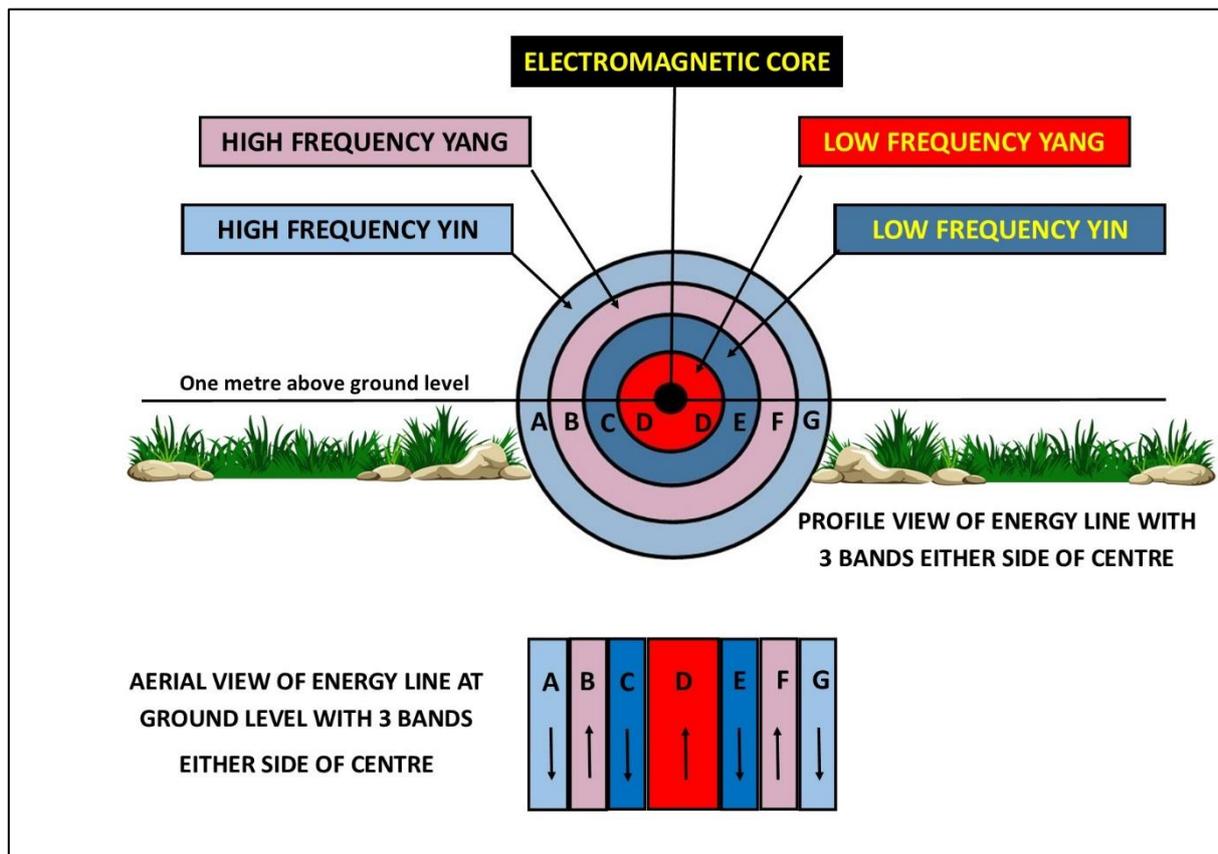

Lines of energy found on the surface of the earth by dowsers and are unlike energy leys in that they do not run straight. They can be of any length from a few feet to many miles. The term was coined by Hamish Miller and Paul Broadhurst. The Michael and Mary lines, which cross England from Cornwall to the East coast of Norfolk, are described in their book *'The Sun and the Serpent'*, and the Apollo and Athena lines that cross Europe are described in their book *'The Dance of The Dragon'*. Other pairs of lines have been found, such as Bel and Elen associated with the Belinus Line, documented by Gary Biltcliffe and Caroline Hoare in *'The Spine of Albion'*. There is a tendency nowadays to refer to these long-distance polarised pairs as Dragon Lines.

NEWSTEAD DOWSING RESEARCH PROJECT 2026 – SESSION 3

APPENDIX 2 – EARTH ENERGY DRAGON CURRENTS

Different types of energy lines have different energetic structures. Mave’s research shows that Earth Energy Dragon currents have the structure of tubes within tubes (similar to how the Energy Viewer David Charman “views” them) and when one of these tubes intersects ground level it forms what dowses as parallel “bands” on the ground. Often the bands will have alternate polarities and directions of flow, as in the diagram below

The Dragon line has a neutral electromagnetic core that runs horizontally one metre above the ground. The diameter of this core will depend on how powerful the Dragon current is and can be anything from a few to centimetres to a metre in diameter. This is surrounded by and number of plasma tubes each containing energy with slightly different characteristics, increasing in frequency further away from the centre of the current. When dowsed at ground level the “bands” will consequently be mirrored on either side of the central band, similar to the example in the diagram below. However, a Dragon current is likely to have more tubes/bands than this.

As will be explained in Appendix 2, Mave has found that these Dragon currents are associated with Blind Springs and use the primary water in the Blind Spring to cleanse and re-energise themselves. Consequently, this particular type of energy line is closely associated with water and it may well be the water that actually manifests the energy within the Dragon current.

NEWSTEAD DOWSING RESEARCH PROJECT 2026 – SESSION 3

Attendant Energy Lines & Emperor Dragons

Sometimes an Earth Energy Dragon current will have other attendant energy lines at either side of it, and sometimes above and below as well, making them anything from 100m to 400m wide. These attendants are of higher frequency than the central line. Hamish Miller was aware of these and called them “outriggers” while Adrian Incedon-Webber refers to them as “Shepherd Lines”. Research by Mave Calvert and fellow members of the Earth Energy Zoom group including Chris Tonge, Ali Denham, Diane Ellerton, Paul the Cow Whisperer and the late Tracy Vincent suggests that these attendant lines are not always permanent features and may manifest for a certain period of time and then disappear. Also, the number of attendant lines can vary over time. Tracy found that sometimes lengths of the Elen and Belinus currents would exhibit these features. Their appearance around the Elen Dragon seemed to be consistent with a Luminous Being such as an Angel or other Deity embedding themselves within the line for a certain distance.

An Earth Energy Dragon current without these attendant lines will usually dowse as being a Type 4 line in the late Rory Duff’s classification. However, when they manifest these attendant lines, they then dowse as a combination of type 4 and type 5 with the energy in the centre being Type 5 and the attendant lines Type 4. The EE Zoom group members came to call these Type 4/5/4 lines “Emperor Dragons” because they dowsed as having exactly the same structure and characteristics as the Blue Emperor and Green Empress in Murcia, Spain but weren’t quite as wide. Although Rory suggested there were a finite number of these Emperor Dragons on earth, it seems they have now multiplied and manifested copies of themselves and they can now be found in many more places where Rory did not initially find them.

We are not specifically looking for these in this project, but it helps to be aware of their existence in case an Earth Energy Dragon current dowses as being much wider than usual.

Energy Line Lateral Movement

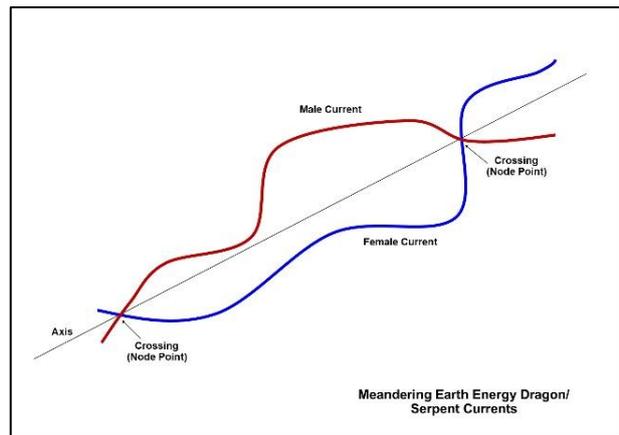

Rory Duff showed in his book “Dowsing Observations” that many energy lines exhibit a lateral or side-to-side movement, which means they may be found in slightly different positions throughout the day. Emperor Dragon Lines, which we will not be looking at in this project, can roll from side to side very quickly covering several times their width in a day, whereas the Earth Energy Dragon currents just exhibit a slight lateral movement that may only be detectable if you are monitoring their exact position throughout the day.

We explore this more in Sessions 4 and 8 when we look at how energies change around the Solstices and Equinoxes, involving the lateral frequencies of different types of energy line coming into harmony with one another. This has been investigated by Chris Tonge.

NEWSTEAD DOWSING RESEARCH PROJECT 2026 – SESSION 3

APPENDIX 3 – EARTH ENERGY DRAGON NODES

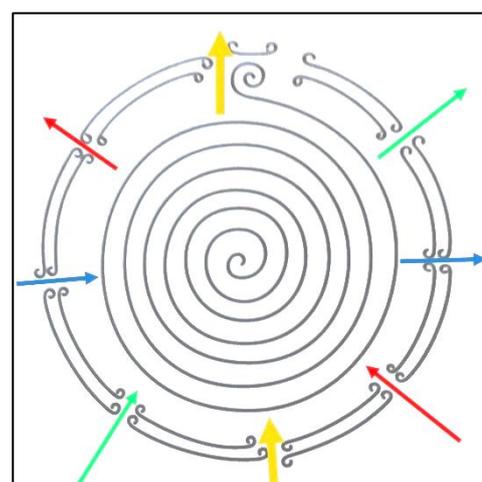

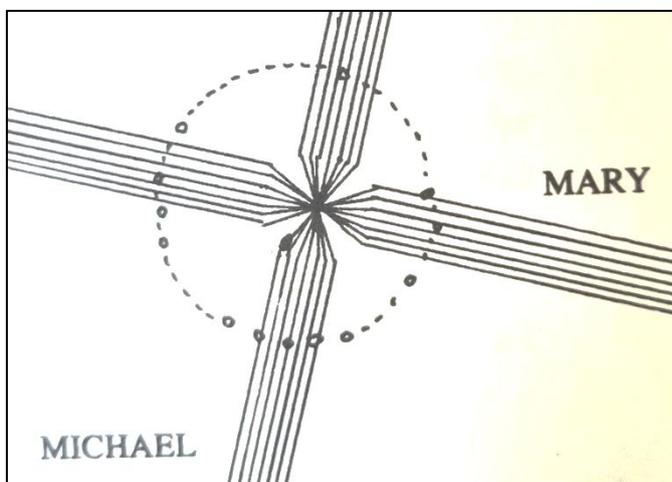

A pairing of Earth Energy Dragon currents can meander around a straight alignment or axis, coming together every so often to cross at what are referred to as Node points. See diagram right.

However, in some cases, such as on the Isle of Man and Malta, Mave has found that they don't follow straight alignments.

The width of the Dragon currents narrows down to virtually nothing as they approach the centre of the Node. They then disappear down into the Node and re-emerge a short distance away. This diagram below left is from page 141 of "The Sun and the Serpent" by Paul Broadhurst and Hamish Miller and shows how the Mary and Michael Dragon currents come together at a stone circle.

In the diagram below right Maria Wheatley shows how the geodetic necklace surrounding a geospiral above a Blind Spring will have openings in it through which the energy lines, Noding over the Blind Spring enter and exit. The coloured lines represent the energy currents which pass through the necklace then are taken down under the ground by the geospiral, re-emerging at the opposite side.

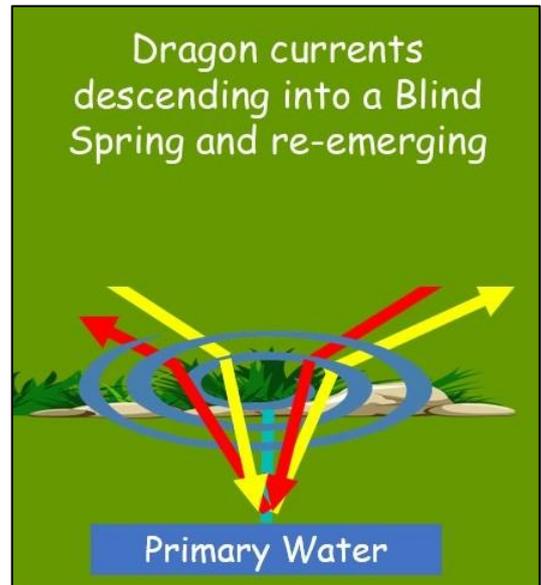

Mave's dowsing has also shown that when a Dragon current descends into a Node it is carrying a certain amount of non-beneficial energy. However, when it re-emerges at the other side of the Node the proportion of non-beneficial energy that it is carrying has reduced dramatically. Mave suggests that this is because Dragon currents seek out Blind Springs and when they narrow and descend into the ground, they are cleansed and energised by the pure virgin primary water beneath the Blind Spring. Additionally, Mave

NEWSTEAD DOWSING RESEARCH PROJECT 2026 – SESSION 3

has found that Dragon currents often descend into Blind Springs even when there is no other Dragon current present, which suggests that the point of Nodes is for energy to be cleansed and balanced rather than simply to allow Dragon currents to come together and cross.

Naturally flowing Dragon currents will seek out Blind Springs as recharging points to cleanse and re-energise themselves. However, many Dragon currents have been anchored into Nodes so have no choice but to flow through them. If the Blind Spring is out of balance and its energies are not functioning properly, then the Dragon currents will not be able to descend to the primary water and will therefore not be cleansed and re-charged.

NEWSTEAD DOWSING RESEARCH PROJECT 2026 – SESSION 3

APPENDIX 4 – SOLAR NOON TRANSITION PERIOD – EARTH ENERGY

This period beings 20 minutes prior to the exact time of local Solar Noon.

At the start of this period, a polarity reversal takes place with Capped Vortices and Dragon Lines dowsing as the opposite polarity to normal, so things that were Yin, counterclockwise or contracting start to dowse as Yang, clockwise and expanding for the rest of the period.

Next, the Capped Vortices spin very fast, one chakra at a time, which effectively cleanses and re-energises them. When this process is complete the amount of non-beneficial energy they are holding has usually dropped to near zero. While the spinning is taking place the Bovis levels of the Capped Vortices can easily increase tenfold or more.

The Dragon Lines then expand and contract one band/tube at a time, seemingly mopping up all the non-beneficial energy in the vicinity because they suddenly dowse as carrying much more of it once they have finished expanding and contracting. While the expanding and contracting is taking place the Bovis levels of the Dragon Lines can easily increase tenfold or more.

The Vortices that serve as Energy Drains then automatically open up and the Dragon currents send out offshoots to these Energy Drains which funnel all the non-beneficial energy underground to be cleansed. These Energy Drain Vortices are different from others because they just take energy down into the ground and do not bring it up from underground. Richard Sears suggests that the energy is vertically 'drained' or 'linked into' a horizontal silvery sheath of energy, about 4m down from the ground which follows the contour of the ground off into the distance - to transmute it

has written two articles about Energy Drains that can be found on the Devon Dowsers website:

[Energy Drains in the Landscape – Mother Earth’s Safety Valve Mechanism | Devon Dowsers](#)

[Energy Drains in the Landscape – Mother Earth’s Safety Valve Mechanism – Part 2 | Devon Dowsers](#)

For around 3 minutes towards the end of the Solar Noon transition period, Mave is unable to dowse the electromagnetic aspects of the Capped Vortices and Dragon Lines. Her dowsing suggests that they go underground to a layer 2 or 3 metres before ground level, just like they do for 12 minutes during the mid-afternoon transition period.

When the Solar Transition period is complete at Solar Noon the Capped Vortices and Dragon Lines are detectable again, the polarities have reversed back to normal and the proportions of (non) beneficial energy dowseable in both features is mostly beneficial energy.

NEWSTEAD DOWSING RESEARCH PROJECT 2026 – SESSION 3

APPENDIX 5 – MID-AFTERNOON TRANSITION PERIOD – EARTH ENERGY

During a 12-minute period between 15:00 and 15:15 Mave finds that she is unable to devicelessly dowse the electromagnetic aspects of Capped Vortices and Earth Energy Dragon currents. Her dowsing suggests that they go underground to a layer 2 or 3 metres before ground level. This may be the horizontal silvery sheath of energy, about 4 metres down from the ground that Richard Sears associated with Energy Drains.

When this period ends at 15:15 the energy field of the Capped Vortex and Earth Energy Dragon currents return to normal.

At the start of this period the Bovis readings of the Capped Vortices and Dragon Currents drop to the same as when they are in their overnight rest state. The Bovis readings then return back to normal at the end of the 12-minute period.

NEWSTEAD DOWSING RESEARCH PROJECT 2026 – SESSION 3

APPENDIX 6 - LINKS TO MAVE CALVERT'S RESEARCH ARTICLES & VIDEOS

One of the aims of this research project is to investigate Mave Calvert's ideas about how the energies of trees, water, earth energies, blind spring networks and landscape pentagrams may be connected and how they are all affected by the Solar Noon and mid-afternoon transition periods as well as sound-based stimuli. We will try to prove or disprove some of these ideas and hopefully find other things as well.

Below are several links to articles on Mave's Sherwood Dowser website and a video on the BSD YouTube channel that give an overview of her ideas and research. You may choose to look at them if you want some background on what we will be looking for. Equally, you may prefer not to look at them prior to doing the dowsing so as not to influence your own findings.

★ In March 2021 I gave a talk to the newly formed Earth Energies Zoom group entitled "Earth Energies Simplified: It's a Question of Balance." There is a transcript of this talk on my website. It shows how I see Capped and Infinite Vortices interacting with Earth Energy Dragon currents and their Nodes, and how these collectively behave during the Solar and Mid-afternoon transition periods:

[11. A QUESTION OF BALANCE | The Sherwood Dowser](#)

★ This article is the transcript of a talk that I gave to the Dowsing Research Group (DRG) in November 2025 giving an overview of what I have found to happen during the Solar Transition periods and the Mid-afternoon transition periods, including how I have found earth energy dragon currents to behave during that time:

[15. THE SOLAR TRANSITION EFFECT | The Sherwood Dowser](#)

This is the recording of that DRG talk:

[THE SOLAR TRANSITION EFFECT](#)

★ This video on the BSD YouTube channel is the third in a series of three entitled "The Landscape Speaks." It outlines Mave's ideas about blind spring networks involve trees, earth energy vortices, energy dragon lines, and underground water working in tandem:

[THE LANDSCAPE SPEAKS PART 3 - Elementals in the Landscape](#)

★ For a humorous look at all the different types of Energy Lines and Nodes that have been identified by Dowsters over the years, take a look at this article that Mave co-authored with David Charman and Tracy Vincent. It was published in the BSD Journal Dowsing Today in April 2022:

[01. LEY LINES & NODES | The Sherwood Dowser](#)
