

SESSION 5 BEACON TREE ENERGIES - RESULTS

This document details the results of Session Five of the Newstead Dowsing Research Project that took place in July 2026. The session focussed on the energies of Beacon Trees, Deva Trees and the associated Springs. The main highlights are summarised on pages 4 and 5. This is followed by a detailed analysis of the findings. The Appendices contain the data sheets submitted by participants, a report of dowsing by Mave at Avebury in June 2025, comments from Paula Norman about how 3pm in the afternoon also affects human physiology and finally a summary of Gordon Field's work on Beacon Trees, Tree Devas, Beacon Springs/Wells and the associated water-based energy lines.

SESSION 5 BEACON TREE ENERGIES - RESULTS

OVERVIEW OF PROJECT

Aim of the Project

The aim of this dowsing research project is to explore different aspects of tree, water, and earth energies and to investigate how the different aspects are interconnected, as well as how they are affected by sound-based stimuli, crystals, the Solar Noon transition period (the 20-minute period leading up to Solar Noon), the mid-afternoon transition period (3pm to 3:15pm), the periods surrounding New & Full Moon and the periods surrounding the Equinoxes and Solstices.

A team of Dowsters led by Mave Calvert is working on the ground in the parkland surrounding Newstead Abbey in Nottinghamshire. Other individuals and groups are carrying out parallel research in other locations.

One of the aims of this research project is to investigate Mave Calvert's ideas about these energies and try to prove, disprove and/or revise some of these ideas and hopefully find other interesting things as well.

The project documentation can be found on Mave's dowsingsherwood.com website:

[Research Project \(List\) | The Sherwood Dowser](#)

As well as the Project Summary and details of each individual themed session, there is a document containing the pendulum dowsing charts, a document containing information about the location, geology and a brief history of the Newstead area, and documents giving opportunities for dowsters to do some remote/map dowsing and monitor some energies in their own home and garden.

Session 5 – Beacon & Deva Tree Energies

The 5th of 8 project sessions took place in July 2026 and focussed on the energies of Beacon Trees, Tree Devas and the associated Beacon Springs. The participating Dowsters were:

NEWSTEAD TEAM 11/7/2026

Mave Calvert, Maria Hale, Shaun Holbrow, Anne Pogson, Kate Richardson, Sian Wilson

DOWSTERS WORKING ELSEWHERE

Sara Bassett in Reigate Priory Park, Surrey 13/7/26

SESSION 5 BEACON TREE ENERGIES - RESULTS

SUMMARY

✦ The team experienced some confusion when asking informational dowsing questions about Beacon Trees. This demonstrated how the individual dowser's understanding of the term "Beacon Tree" affected the answers that they were being given through both informational dowsing and channelling guides through mediumship.

✦ To avoid further confusion, a summary of the research of the artist tree dowser Gordon Field can be found in Appendix 3. This explains what Beacon Trees, Tree Devas and their associated Springs and Wells are as well as how these energies of the tree networks have been evolving over time.

✦ The Newstead Team dowsed two Tree Devas. These trees were first identified by Gordon Field and have an above ground energy field 7 times the height of the tree. Their role is to gather energy and release it at the lunar phases. Mave has established that these trees play a significant role in the Lunar Transition periods

✦ The energy field of a chestnut Tree Deva contracted when AUM was chanted to it, and the tree simultaneously told the Medium who was with us that it didn't like AUM. In Session 1 chanting AUM had cause the energies of an Oak to expand very rapidly and widely. This shows that trees do not always respond in the same way.

✦ When dowsing the energy fields of the Tree Devas and associated water the colours blue and yellow were observed quite a lot. These fit with the colours that Gordon Field sees around these trees and the colours that are in the energy fields of the Beacon Springs

✦ Ali Denham has identified the thin lines of yellow energy that rise into the biosphere from Beacon Springs as aquastatic energy whose function is to rise around 30.000 feet up into the atmosphere and return lifeforce energy to the Earth

✦ Shaun Holbrow noted that the bands on the trunk of a tree are very similar to those on a standing stone.

✦ Beacon Trees broadcast energy into the surrounding landscape over a radius of around 2 miles at the end of the Solar Transition Periods that take place prior to Sunrise, Solar Noon and Sunset. These times differ according to location.

✦ Deva Trees broadcast energy into the biosphere at the end of the Lunar Transition Periods that take place prior to New Moon, Half Moon and Full Moon. This happens at the same time across the planet providing the location is in daylight.

✦ Shaun Holbrow noted that during both the Solar Noon and Mid-afternoon transition periods water lines associated with the trees and nearby blind springs narrowed and disappeared for short periods in a similar way to how they do at Eclipses.

SESSION 5 BEACON TREE ENERGIES - RESULTS

✦ Beacon Trees are connected to Beacon Springs/Wells by a moving vertical circular energy where an arc goes from the centre of the spring to the top of the tree, down the tree into the earth and then via an arc below ground back to the spring. This flow direction occurs while ever the water in the spring is rising upwards. However, when polarity reversals take place and the water in the spring is sucked downwards, the flow direction of the circular energy connecting it with the tree also reverses in a kind of siphon effect.

✦ Tree Devas are connected to nearby blind springs in a similar way to how Beacon Trees and Beacon Springs/Wells are connected with the same circular energy flow.

✦ Anne Pogson the Dowser/Medium who was with us confirmed Mave's experience that the mid-afternoon transition period does not take place during the Winter months.

✦ Paula Norman from the Dowsing Research Group has provided information to show that the time around 3pm is significant for the physiology of both plants and humans. See Appendix 2 for a summary of Paula's information.

SESSION 5 BEACON TREE ENERGIES - RESULTS

DETAILED FINDINGS

SESSION 5 BEACON TREE ENERGIES - RESULTS

Part 1 – Beacon Trees and Tree Devas

NEWSTEAD

The Importance of Framing Dowsing Questions and the Dowser's consciousness

The team experienced some confusion when asking informational Dowsing questions about Beacon Trees. Anne, the Dowser/Medium stated that she had been told that all trees are Beacon Trees whilst some other people got a 'No' to this statement. This was highlighted again a few days later when four members of the team were on another Dowsing outing and attempted to ask a tree for its age.

It transpired that Mave had an incomplete understanding of Gordon Field's work on Beacon Trees which had influenced the team members. Also, we were being taught that a "tree" is much more than its physical trunk, branches and leaves but is part of a larger energy field in which other physical trees may also have once stood.

When Dowsters get different answers, it is important to investigate why rather than assume that one Dowser is correct and another is incorrect. As Mave says, "Go with what you get even if it's not what you were expecting and not what others get."

This demonstrated how the individual Dowser's understanding of the term "Beacon Tree" affected the answers that they were being given through both informational dowsing and channelling information through mediumship.

As Kate commented afterwards "The wording/understanding/interpretation by the Dowser, and the subject is so key"

Throughout this project we have also been shown that it is very difficult to take baseline readings for any of the energies that we are researching because they are in a constant state of change, so can differ if two Dowsters stand in slightly different places and don't take the readings at exactly the same time. They are also affected by the consciousness, energy fields and belief systems of different Dowsters.

Informational Dowsing questions such as "Is this what Gordon Field would call a Beacon Tree?" or "What is the age in human years of the physical part of this tree" or "Show me the undisturbed average energy field of this tree over the last 24 hours" may elicit more precise answers.

It is also important to remain in the heart-centred mediative dowsing frame of mind when asking informational dowsing questions and not let your left brain take over when trying to think of questions to ask.

Ali Denham recommends that at the end of each short period of Dowsing it is helpful to ask whether the information you and/or others have been given is accurate on a percentage scale and if the accuracy is less than 90% ask if that is significant."

SESSION 5 BEACON TREE ENERGIES - RESULTS

Gordon Field's Research

Gordon Field is the artist tree dowser from SW England who first introduced the term "Beacon Tree" to the Dowsing world.

Mave spent some time after the Newstead project session studying all Gordon Field's emails from over the last few years in detail. These paint a picture of how tree networks have been evolving over recent years and are summarised in be found in Appendix 3.

Mave realised that she had an incomplete understanding of Gordon Field's work and although she understood about Beacon Trees, she hadn't understood about another type of tree energy known as a 'Tree Deva' which is just as important to this project. Gordon's work shows that over recent years mor trees have become Tree Devas and some Tree Devas have now become Beacon Trees. Fortunately, even though we were unaware of the concept of Tree Devas at the time. the Luminous Beings who are guiding this project led us to two Tree Devas at Newstead via a combination of intuition and the use of Dowsing rods in 'show me' mode with the intent of "Please take us to a location where we can carry out today's research. "

Tree Devas and the Lunar Transition Periods

Gordon Field's work (see Appendix 3) shows that over recent years, more and more trees are becoming Beacon Trees, more trees are now Tree Devas and some Tree Devas are transforming into Beacon Trees'

According to Gordon, the energy field of a Tree Deva fluctuates with the phases of the Moon. The energy field spirals out from the tree a day at a time and reaches the edge of its overall energy field after seven days. The bands of energy then retreat day by day rising up into the Biosphere.

After studying Gordon's insights about the role of Tree Deva, Mave had an intuition that these particular trees are involved in the Lunar Transition periods. She therefore monitored the New Moon lunar transition period that occurred on the morning of 14th July and the First Quarter lunar transition period that occurred on 21st July and was able to confirm this. She also monitored the energy field of the Poplar tree in her garden, which identifies as a Tree Deva, over a period of time to see how this differs with the moon phases. This will be written up in detail with the findings for Session 7 of this project which will concentrate on New and Full Moon energies.

SESSION 5 BEACON TREE ENERGIES - RESULTS

Beacon Trees at Newstead

Most of us had actually parked under the canopy of the Beacon Tree at Newstead. There is another Beacon Tree, known as the Pilgrim Oak, at the entrance gates to Newstead one mile away to the NE which was identified by Maria and asked Kate if we could acknowledge it when we pass it arriving at and leaving Newstead. There is also a Beacon Tree at Annesley Old Church around 1.5 miles to the SW. all three of these Beacon Trees line up in almost a straight line. For context, this image shows the area that would hypothetically be covered by a one-mile radius of energy broadcast by each Beacon Tree.

Dowsing the Trees at Newstead

The weather was fair, hot and had been dry for several weeks. After being guided to a place where we could cleanse and re-balance our own energies, we were taken into the woodland bordering the Great Lake to close its south-west bank. Here we found a twisted sweet chestnut tree that had lost most of its bark and some branches yet was very much still in leaf and had vibrant energies once we had worked with it for a little while. The tree was at the side of a track through the woods and behind it to the west was a slope covered in dense vegetation so we could only measure the energies at the eastern side of the tree between it and the lake.

The undisturbed energy field of the tree prior to our arrival dowsed as 21 paces (around 1.5 metres). Mave will remotely monitor this on a daily basis for the next month alongside dowsing the extent of the energy field of the Poplar tree in her garden, which is also a Tree Deva, to see if they do indeed expand and contact with the Lunar phases as Gordon Field suggests.

Sian and Kate decided to chant AUM to the tree based on the positive response of an Oak tree to this in Session 1. However, as they were chanting the tree told Anne the

SESSION 5 BEACON TREE ENERGIES - RESULTS

Dowser/Medium, that it didn't like AUM and simultaneously Mave and Maria, who were taking baseline readings, felt the tree's aura retract inwards.

Anne and Shaun experimented with Anne placing a hand on the tree and sending it love. Shaun's dowsing of the tree's energy field showed a positive response to this with the field extending further outwards towards the lake.

After Kate sang a tree blessing song to the tree we dowsed that the Bovis of the tree had increased to 30,000ub from the 19,500ub that it was when we first arrived.

Maria dowsed that this tree's energy field extended to 7 tree heights above it and 5 below, getting exactly the same when Mave asked her to re-check. Mave was initially perplexed as a Beacon Tree's energy field is normally 36 tree heights above it and thousands of tree heights below it. However, she had incorrectly assumed that we had been led to a Beacon Tree and as it was within the dense forest she was unable to stand back and observe its energy field to check. However, when she subsequently read about Gordon Field's research into trees known as 'Tree Devas' whose energy fields are 7 tree heights above them, she realised that we had been guided to work with a Tree Deva rather than a Beacon Tree.

Maria dowsed that there were no deep underground rivers below the tree which Gordon Fields says are often associated with Beacon Trees. However, she dowsed that there was underground water present. The water was 35 feet below the tree and was 60% primary water and 40% secondary water suggesting this was either not a Blind Spring or the rising primary water had been infused with a lot of surface water.

SESSION 5 BEACON TREE ENERGIES - RESULTS

The tap root extended to 25 feet below ground and touches water that is 6 feet deep. [According to the internet the depth of tap roots varies by species with oaks sinking a tap root to a depth of 2 or 3 times the height of the tree. The longest tap roots ever recorded was a wild fig tree with almost 400 feet. Presumably the depth of underground water that the tree is connecting to also determines how deep the tap root becomes as well as the need to anchor itself]

Maria dowsed 8 energy lines connected to the tree's trunk at 1 metre above ground level. The energy in these lines was all flowing predominantly towards the tree at around 12:04, suggesting that it was collecting energy from nearby trees at the time. Due to the terrain we were unable to check where all the energy lines connected to.

The tree's energies dowsed as being broadcast over 2 miles. This dowsed as being done with the help of other trees. As this is not a Beacon Tree perhaps the 2 mile refers to the area that the entire tree network broadcasts its energy over via the Beacon Tree? Also, as this turned out to be a Tree Deva that works with other Tree Devas to send energy up into the Biosphere, perhaps 2 miles is how far upwards the energy is broadcast during Lunar Transition periods?

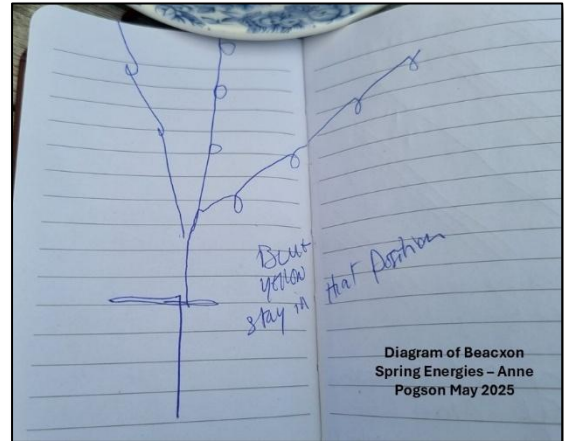

Shaun found a water line next to the tree. It was initially 145cm wide and dowsing as Indigo. Sian felt that there was water at 26 feet to 75 feet down beneath this water line coming from the tree towards the lake.

Climbing onto a fallen trunk to reach high up the chestnut tree, Shaun found that there were bands of energy very similar to those he has detected on standing stones and an energy band coming from the tree at around 9 feet above the ground and heading up the slope.

SESSION 5 BEACON TREE ENERGIES - RESULTS

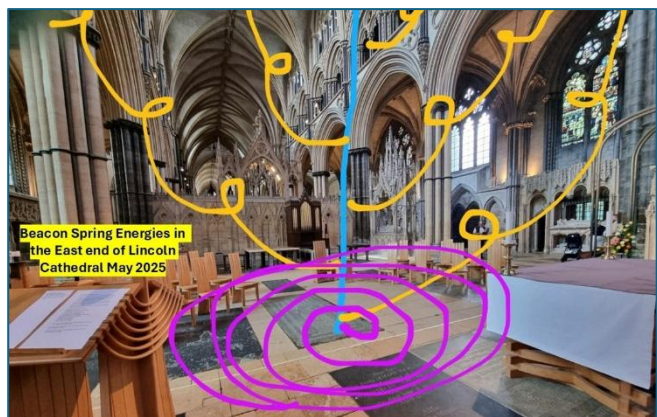

Part 2 – Beacon Springs

Gordon Field states that Beacon Trees are often associated with a nearby Beacon Spring or Holy Wells where water comes to the surface. It seems that as more Beacon Trees are coming online and underground water levels are lower due to human demand, many Beacon Trees are now associated with Blind Springs.

In May 2025 Anne Pogson used her mediumship skills to channel an energy pattern which after research by Mave Calvert and Ali Denham turned out to be associated with Beacon Springs and Wells. The energy pattern showed a blue dome of energy rising vertically directly above the centre of the spring. Surrounding this at ground level was a spiral. Also rising vertically but at angles were several thin yellow lines which loop ever so often. These rise high into the cosmos and there are often seven of them.

Mave and Anne found this energy pattern at the East end of Lincoln Cathedral where there appeared to be Beacon Spring energies which would once have been outside the Cathedral before it was extended in the late 1200s. (See image) The central tower, that was once surmounted by a large spire, dowsed as having beacon tree energies.

Mave also found this pattern at a Blind Spring and a Beacon Well at Avebury in June 2025 (see Appendix 1)

Aquastatic Energy

When Mave feels the yellow lines coming from the Beacon Spring energy they feel as thin as a pencil lead and very similar the ones she has dowsed with Ali Denham connecting to human graves and indentations in walls similar to cup marks. Ali identified this as Aquastatic energy which is the formative potential for geodetic lines (the parallel triads around water lines, track lines and Aquastats as well as geospirals) that arises from Primary water.

Ali's dowsing shows that this is indeed aquastatic energy rising from these Beacon Springs. They have not been influenced by the trees they are associated with. They rise

SESSION 5 BEACON TREE ENERGIES - RESULTS

to approximately 30,000 feet up into the Cosmos then return to the Earth, not dissipating during any part of their ascent or descent. They return to Earth as Aquastatic energy and simply return in general without any specific destinations. They are returning life force to the ground, not to the atmosphere. The effect they have on the atmosphere through which they travel is one of communication, nothing else. This returning aquastatic energy is the same as that which ascends from the Beacon Springs.

NEWSTEAD

Since the Newstead team had been delayed from starting the dowsing for various reasons and the terrain by the twisted sweet chestnut Tree Deva was not suitable to look for a spring associated with the tree, we decided to monitor the tree over the Solar Noon period and then carry out Part 2 of the research after lunch in a different location alongside the mid-afternoon transition period research.

SESSION 5 BEACON TREE ENERGIES - RESULTS

DOWSERS IN OTHER LOCATIONS

SESSION 5 BEACON TREE ENERGIES - RESULTS

Part 3 - Solar Noon Transition Period

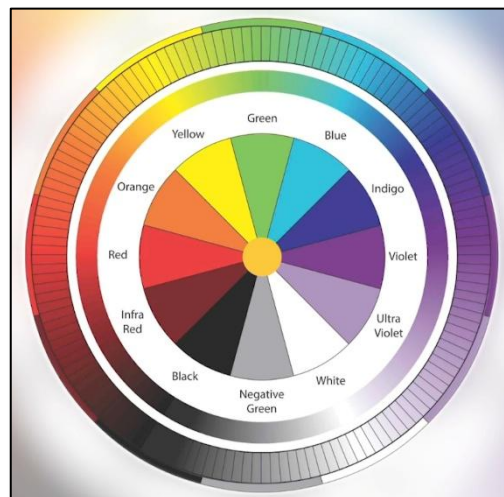

Mave Calvert has found that during the 20 minutes leading up to the exact time Solar Noon, the Energy Lines and Capped Vortices go through a transition phase where they reverse polarity, move very quickly, disappear underground for 3 minutes and then return to normal. The net effect is that they have transmuted any non-beneficial energy that they were holding prior to the transition period.

Research by the Newstead team is now showing that underground water and trees are also associated with this process and there is a build up to this time as well where the energies seem to reset or reboot themselves in the ten minutes prior to the start of this period. There also seem to be two distinct phases to the process with the first half seeming to be collecting and cleansing energy and the second half re-energising and broadcasting energy.

Solar Noon dowsing by Mave at Avebury in June 2025, described in detail in Appendix 1, may help to shed light on the bigger picture.

NEWSTEAD

Maria sat on the fallen branch next to the twisted chestnut Tree Deva to dowse the Solar Noon period and commented that she felt cocooned by the tree's energy. Maria dowsed the colour frequency of the tree's energy throughout the Solar Noon period using the colour wheel shown here. Sian sat on the water line to dowse its Bovis and listen to its energies whilst Shaun measured the width and colour frequency of the water line. Mave was sitting beside Maria and notetaking.

SESSION 5 BEACON TREE ENERGIES - RESULTS

Observations

12:37 to 12:40 (33-30 minutes before Solar Noon):

Tree energy dowsing as BLUE and steady,

12:43 to 12:47 (27-23 minutes before Solar Noon):

Tree energy cycling between BLUE and GREEN.

Water Line Bovis 14,000ub

12:48 (22 minutes before Solar Noon):

Sian commented that the water was holding steady noise-wise

12:49 (21 minutes before Solar Noon):

Both Maria and Sian report that their pendulum swings are getting bigger

12:50 (20 minutes before Solar Noon):

Maria's pendulum became very slow

Sian reported that the Bovis of the water line was still 14,000ub

Shaun reported that the water line was drifting towards BLUE from Indigo

12:51 (19 minutes before Solar Noon):

Maria dowsed the tree energies as BLACK

Sian reported that the Bovis giving a reading of 0 as if it had crashed but she could still hear the water line

Maria dowsed the tree energies as NEGATIVE GREEN (GREY)

12:52 (18 minutes before Solar Noon):

Sian reported the Bovis of the water line reading 0 then its width suddenly dropped

Sian was getting a clockwise swing on her pendulum

12:53 (17 minutes before Solar Noon):

Maria dowsed the tree energies as still being NEGATIVE GREEN (GREY)

Shaun dowsed that the Water Line had changed to YELLOW

Sian dowsed the Water Line's Bovis was now 6,500ub

Maria was getting an anticlockwise spin around the centre of the chart where SPIRITUAL GOLD is

The esoteric colour predominant in sunlight is now GREEN

12:54 (16 minutes before Solar Noon):

Sian reported that the Bovis levels were ramping up

Sian reported that the pitch of the Water Line that she could hear had increased

Sian reported that her pendulum was swinging anticlockwise

Maria reported that the colour frequency of the tree changed from BLUE to BLACK

SESSION 5 BEACON TREE ENERGIES - RESULTS

12:55 (15 minutes before Solar Noon):

Sian reported that the frequency of the Water Line that she was hearing pitched down and then back up

Maria reported a pendulum swing between the colour frequencies of BLUE and BLACK

12:56 (14 minutes before Solar Noon):

Sian reported the Bovis of the Water Line was holding steady

The Water Line then completely disappeared

Maria reported her pendulum to be circling in Find mode giving no colour reading

12:57 (13 minutes before Solar Noon):

The Water Line returned

12:58 (12 minutes before Solar Noon):

Maria dowsed the colour frequency of BLUE

Shaun reported that the Water Line energy dowsed as INDIGO

12:59 (11 minutes before Solar Noon):

Maria dowsed the colour frequency changing from BLUE to YELLOW

Maria then dowsed the colour frequency changing from YELLOW to GREEN

13:00 (10 minutes before Solar Noon):

Maria dowsed the colour frequency cycling between YELLOW, GREEN and BLUE

13:04 (6 minutes before Solar Noon):

The Water Line readings were stable

Maria's pendulum started giving a bigger swing

13:05 (5 minutes before Solar Noon):

Maria's pendulum was circling around the edge of the chart

Sian reported the Bovis of the Water Line was holding at 30,000ub

Sian's pendulum was giving a clockwise swing

13:06 (4 minutes before Solar Noon):

Sian's pendulum was giving an anticlockwise swing then changed to clockwise

Maria's pendulum swing was getting bigger and bigger

13:07 (3 minutes before Solar Noon):

Maria's pendulum swing was giving a wide swing around the edge of the chart

The Water Line energies remained constant

SESSION 5 BEACON TREE ENERGIES - RESULTS

13:08 (2 minutes before Solar Noon):

Maria's pendulum swing was giving a wide swing around the edge of the chart

Mave felt that the tree was now broadcasting energy

Shaun suggested that the tree absorbed the energies of the water when the Water Line shrank

13:09 (1 minute before Solar Noon):

Maria dowsed the Tree's energy as BLUE

13:10 (Solar Noon):

Maria dowsed the Tree's energy as BLUE

SESSION 5 BEACON TREE ENERGIES - RESULTS

A Note on Colours

The frequent dowsing of the colours of Blue and Yellow were particularly interesting given that Gordon Field says that the energy field of Beacon Trees and Deva Trees contain both blue and gold energy (See Appendix 3). Sian has also seen blue and gold energy around Oak trees. When Anne Pogson channelled the diagram of Beacon Spring energies (see Part 2), she also got the colours of blue and yellow associated with them.

Channelled Information regarding Solar Noon

After we had completed the Solar Noon dowsing the following information was received by Anne Pogson who was with us and is a Medium and a Dowser.

Anne: Anne (channelling): “There are things that happen at Solar Noon that you’ll not understand. You never will. There are energies around you just now that you are not picking up on as well. There are multiple energies that are around you. We feel that you don’t quite understand all of it but there is a lot that you do understand. You will learn more as you go along. There are various energies, but they are affected by different dimensions or realms.”

Maria: “Anne, can I just ask, this changeover as we go through Solar Noon, is very similar to when we cross the Equator and the Vortex swirls round one way on one side of the Equator and the other way on the other side of the Equator. So when the Sun passes over, we are getting clockwise and anticlockwise/ is that the same?”

Anne (channelling): “He says there is a similarity. There is something similar but it’s not quite the same. You could compare the two and come up with something that would resonate but you need to think about it and process it harder. There is something there. She is on the right track. Keep going with that”

[In session 2 of this project when we dowsed water energies, we found that the Blind Springs were either stopping bubbling and pulsating altogether and stilling during the Solar Noon transition period or, more likely, reversing polarity so instead of pushing water upwards they were temporarily sucking water downwards. This may be what the above answer to Maria’s question is referring to]

SESSION 5 BEACON TREE ENERGIES - RESULTS

DOWSERS IN OTHER LOCATIONS

Sare Bassett

SESSION 5 BEACON TREE ENERGIES - RESULTS

Part 4 - Mid-Afternoon Transition Period

The Mid-afternoon transition period is the 15 minutes period between 3pm and 3:15pm BST when the energy fields trees, the lines connecting trees, Capped Vortices and water lines can no longer be detected, appearing to have collapsed. They dowse as having gone underground, some of them into the Elemental Realm. This only seems to happen during the half of the year when the British Isles are in British Summer Time (GMT+1)

NEWSTEAD

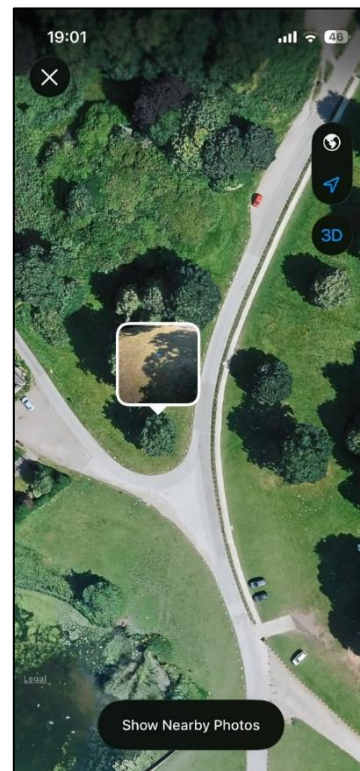

After lunch we were guided by the Dowsing Rods to an Oak Tree located opposite the trees where we had done the original tree energy research in Session 1 back in April. It was just under 150 metres SSW of the Beacon Tree in the car park and around 45m WSW of Grandfather Oak who had reacted positively to our AUM chant in Session 1.

This was also a Tree Deva, although we weren't aware of that at the time. It was energetically connected to a small Blind Spring next to the tree by a circular linear energy that connected the two by an overground and underground arc. This is the same energy feature that connects Beacon Trees and Beacon Springs (see Mave's observations at Avebury in Appendix 1)

The Blind Spring had 7 attached water veins, one of which connected with the Oak Tree. We didn't have time to check the depths and flow rates though. Anne and Mave felt that two of the water veins were actually an underground stream that flowed over the top of the Blind Spring coming from neat the Abbey, going under the tree and then northwards into the woods. Anne channelled that this stream was virtually dry due to the recent drought conditions, yet the energy of the water was still present.

Maria dowsed the Blind Spring associated with the Tree Deva as 19,000ub with a water depth of 30 feet. As we found in Session 2 - Water Energies, Maria dowsed that the water in the water veins had a two-way flow with one direction being predominant, suggesting some of the water is rebounding back when it fast flowing water under pressure and/or various smaller fissures, obstacles, etc in the underground rock strata.

Maria dowsed that one of the water lines connects with the Beacon Tree [This may mean the actual Beacon Tree 150 metres away in the car park or could be the Tree Deva that we had incorrectly assumed was a Beacon Tree. We can check this the next time we are at Newstead]

SESSION 5 BEACON TREE ENERGIES - RESULTS

Anne agreed with Mave's findings that the mid-afternoon transition period doesn't happen in the winter months. Mave is now feeling that rather than this just stopping and starting at a specific date such as the Equinoxes, it depends on the local environment, climate and may be a gradual change from a longer to shorter period.

Maria dowsed the colours of the blind Spring and found the baseline colour of its energy field was blue. During the dowsing of the mid-afternoon transition period and the ten minutes preceding it she found that her pendulum on the colour wheel that she had used at Solar Noon was cycling so it crashed, was still, returned and swung in a wide circle and then repeated the cycle. This was consistent with the way Sian's pendulum behaved over the Bovis chart except their swings were in opposite directions.

While Maria measured the colours of the Blind Spring and Sian measured the Bovis, Shaun monitored the water lines associated with the Blind Spring.

Observations

At 14:52 (8 minutes before the mid-afternoon transition period):

Some of the team felt the energy field being pushed out quite wide for 2 minutes

At 14:54 (6 minutes before the mid-afternoon transition period):

Maria reported that her pendulum was circling anticlockwise on the colour dowsing wheel. At Solar Noon it had been circling clockwise.

Maris then got the colours moving from BLUE to YELLOW to WHITE.

Sian found that simultaneously the Bovis was dropping to 12,000ub and she was getting a clockwise swing.

At 14:55 (5 minutes before the mid-afternoon transition period):

Shaun reported that the water line that he had been monitoring had gone. He then checked the others and found they too had gone. [To clarify = at Newstead we have been checking the energy of the lines themselves with dowsing rods rather than checking for the geodetic triads that run parallel to water lines]

At 14:56 (4 minutes before the mid-afternoon transition period):

Nothing changed on the colour and Bovis charts and all the water lines were still gone

At 14:58 (2 minutes before the mid-afternoon transition period):

The energy of the water lines returned and Shaun could dowse them again

Sian commented that it felt like a 3-4 minute reboot. Shaun mentioned that he and Paul Vivian had found an energy line at a stone circle dissolving and then returning over a period of 4 minutes and this felt similar.

SESSION 5 BEACON TREE ENERGIES - RESULTS

At 15:00 (start of the mid-afternoon transition period):

The energies returned and were dowseable again

Both the Bovis and Colour wheel were spinning in large circles.

At 15:05 (5 minutes into the mid-afternoon transition period):

Shaun reported that the water line had expanded to 1.3 metres for less than a minute

The effect of 3pm on Humans and plants

Information received from Paula Norman of the Dowsing Research Group was discussed. This involves Paula's own research into sleep patterns and the Gaia Hypothesis which shows how human physiology and that of plants are affected around 3pm. See Appendix 2 for a full summary of this information.

The team noted that by about 15:07 they were all feeling sleepy and gradually stopped dowsing and sat down. Afterwards they felt fine again and went on to re-check some dowsing from previous sessions and take the opportunity to visit the Node in the formal gardens while it was quiet.

Channelled Information about the Mid-afternoon transition period

Through her Mediumship Anne received information advising us that if humans take a 10-minute nap around 3pm this will recalibrate their metabolism. This seems to fit well with Paula Norman's information.

Anne channelled that there is a natural energy field that happens at this time of the day which is related to the power of the Sun and differs from that at other times of day. She said that the Earth's magnetic field was pulsating, staying strong then retracting in cycles. She was given information about a strong electromagnetic energy and magnetic pool from the atmosphere related to the Sun's power that is around us at this time of day. It was stronger than usual today because of the hot dry weather and strong sunlight.

Mave noted that the esoteric colour predominant in sunlight at this time is Orange. Interestingly orange is the colour associated with purging and the late Dr Robert J. Gilbert taught in his Spiritual Science courses that when a human being is about to urinate or defecate, there is a surge of orange energy around their lower abdominal area. Given that the mid-afternoon period appears to be related to purging of energies and resetting the metabolism of all the Earth's energies then this would make sense.

In the winter months when there are comparatively fewer hours of daylight and Sunlight is weak, there perhaps is not sufficient orange energy in Sunlight to create the correct atmospheric/magnetic conditions for this to take place and could be why humans can be adversely affected by the lack of sunlight in winter.

SESSION 5 BEACON TREE ENERGIES - RESULTS

Mave Calvert at Avebury June 2025

Avebury

Mave made these observations a year ago at Avebury in Wiltshire, England where Britain's largest remaining stone circle and henge is located. However, she only located the relevant notebook and wrote them up following this project session.

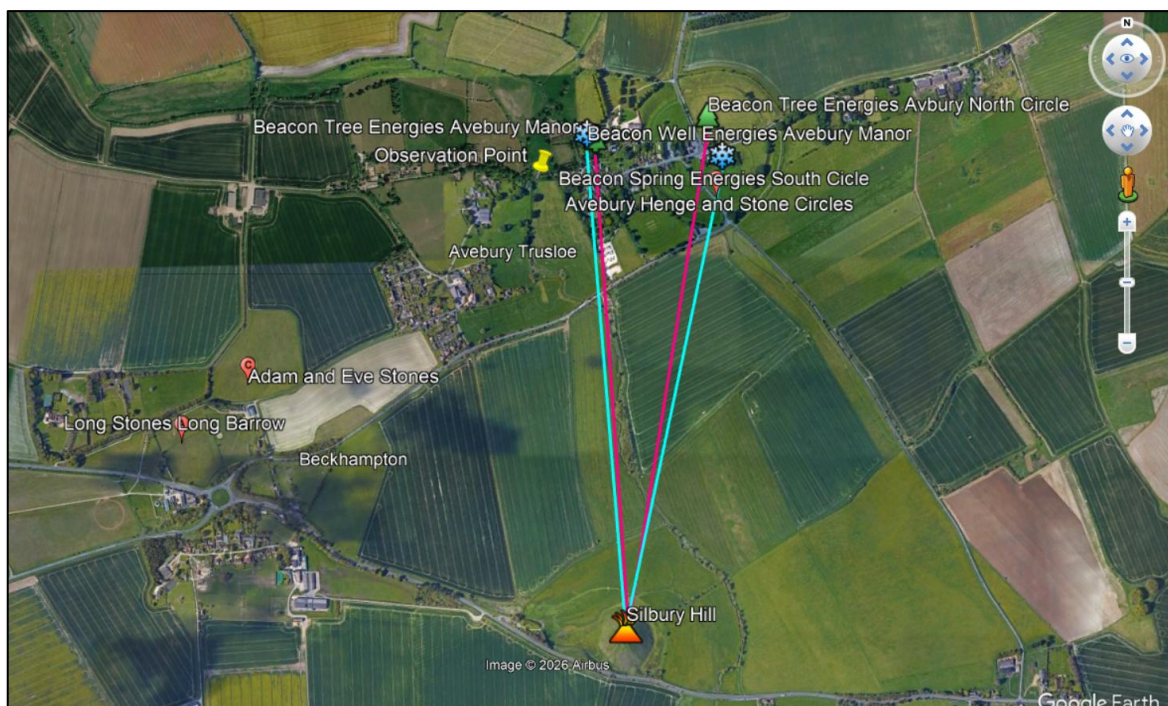

Dowsing at Avebury Mave found Beacon Tree energies in the Cove which is sited at the centre of what was previously the North Solar Circle in the NE quadrant and Beacon Spring energies in what was previously what was previously the South Lunar Circle in the SE quadrant. Between these, almost along the road, runs the St Michael Ley, which is a straight Energy Ley connecting Cornwall and Norfolk around which the Mary and Michael Dragon currents weave. This Energy Ley dowses as having two bands either side of centre, each 3 paces wide.

She also found a Beacon Tree in the grounds of Avebury Manor and identified the nearby Lion Well as having Beacon Well energies. Both sites had a connection to Silbury Hill around a mile south of Avebury.

SESSION 5 BEACON TREE ENERGIES - RESULTS

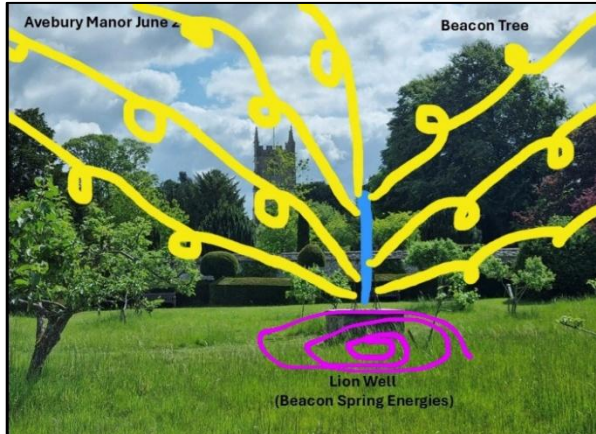

The diagrams below show the relative locations of the two Beacon Tree and Beacon Spring/Well energies that Mave found at Avebury, their connections to Silbury Hill and the standing stones at Beckhampton that feature in Mave's Solar noon transition period observations.

SESSION 5 BEACON TREE ENERGIES - RESULTS

Avebury Manor Gardens

In Avebury Manor gardens on 2nd June 2025 Mave found a Beacon Tree and also Beacon Spring energies at the Lion Well. Using Billy Gawn's dowsing by eye technique, she observed a circular energy arcing above and below the ground connecting the Beacon Tree and Beacon Spring. At 10:45am she observed that the flow was from the Spring to the tree. This became a vesica at the Solar Noon transition period with two counter rotating toroidal fields overlapping.

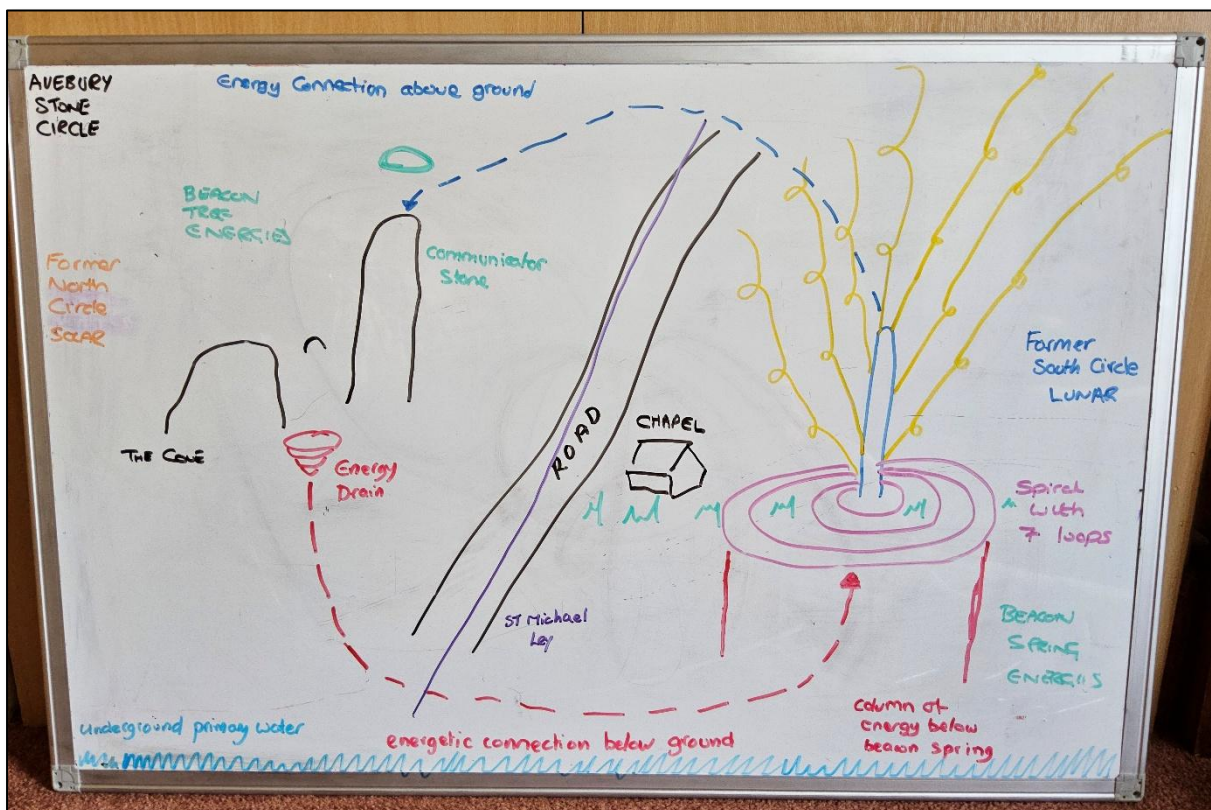

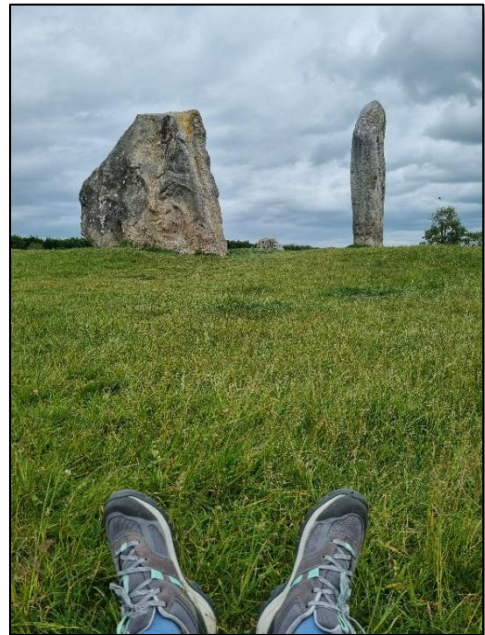

SESSION 5 BEACON TREE ENERGIES - RESULTS

Solar Noon at The Cove in Avebury Stone Circle 1/6/25

On 1st June 2025 Mave sat in sight of the Cove at Avebury to observe the Solar Noon transition period. Solar Noon was at 13:05 at Avebury that day. Her dowsing by eye technique, which is similar to that used by the late Billy Gawn, works best when she is alone and some distance from the target.

At 11:20am Mave observed that taller and thinner stone in the Cove stood in energies similar to that of a Beacon Tree and acted as the communicator.

She noted that the Beacon Tree communicator energies in the Cove (former north circle) were connected to the Beacon Spring Energies behind the Chapel (former south circle) by both underground and overground arcs that formed a huge circular energy which was going down into an Energy Drain at the cove and coming back up through the energetic column beneath the Beacon Spring energies. Above ground this energy then arced from the energetic dome above the Beacon Spring to the tall thin stone in the Cove which acted as the Communicator (see whiteboard diagram below).

SESSION 5 BEACON TREE ENERGIES - RESULTS

She could sense 8 energy lines flowing away from the Cove just below the ground. These seemed to be water-based energies and about 2m wide. The energy felt flat rather than circular. When there was a smaller circle of stones around the Cove it would have contained then energy of the torus but now the circle of stones is no longer there the torus is free to widen out naturally as far as it needs to.

At 11:38 she observed that these 8 lines seemed to be curving downwards to form a torus underground and wrote in her journal “When they are working to drain energy away the torus starts to spin”

Solar Noon Transition Period at Avebury Stone Circle 1/6/25

From 12:02 to 12:07 (around one hour before Solar Noon) Mave had a vision of an etheric lady in shimmering blue robes coming from the Longstones Long Barrow at Beckhampton about a mile to the SW of Avebury and gliding towards Avebury. As this etheric lady arrived from the West the wind got up momentarily. The Lady stood in the centre of the Cove for around 5 minutes with her arms outstretched and long thin legs extending below the ground. She then descended into the ground and emerged at the centre of the Beacon Spring energies 100 metres away, having followed the underground arc connecting the two. Mave got the impression that this was the Lady of the Well activating the energies ready for the Solar Noon transition period.

At 12:37 (27 minutes before Solar Noon) Mave observed that the atmosphere was quiet with an air of expectancy. She felt that the Beacon Spring had started bubbling and pulsating. It felt like this sends a signal underground to the Beacon Stone (communicator). The underground water level rose below the Beacon Spring and simultaneously dropped at the Cove in a sort of siphon effect.

At 12:39 (26 minutes before Solar Noon) Mave noted a suction in the underground arc towards the Beacon Spring which activated the Energy Drain at the Cove. [An Energy Drain is a Vortex that only flows downwards. Richard Sears of the Devon Dowsers has investigated these in detail and two of his articles can be found on the Devon Dowsers website]

At 12:41 (24 minutes before Solar Noon) Mave could perceive the ethereal sound of drumming, probably underground, coming from the direction of Silbury Hill.

At 12:42 (23 minutes before Solar Noon) Mave sensed a pulsation in all of the underground water in the Beacon Tree/Spring Network.

At 12:43 (22 minutes before Solar Noon) the energy of the communicator stone was sucked below ground then up into the cosmos almost like the central channel breathes that Dr Sue Morter teaches. This happened several times for almost one minute

SESSION 5 BEACON TREE ENERGIES - RESULTS

At 12:45 (20 minutes before Solar Noon) A sphere rose up high above the communicator stone at the Cove and started to spin very fast anticlockwise becoming a donut shaped torus. This appeared to be sending a packet of information to the south. [Billy Gawn mentions on pages 197-8 of 'Beyond the Far Horizon' that similar donut shapes that he has observed seem to communicate with "an exchange of small pulses, or packages of energy or information"]

At 12:46 (19 minutes before Solar Noon) The torus above the communicator stone slowed, became a sphere again then dropped back into the Vortex surrounding the stone.

At 12:47 (18 minutes before Solar Noon) the polarity reversal took place and the circular flow between the Cove and the south circle energies reversed its direction of flow so now it was flowing from the Spring to the Cove in the underground arc and from the Cove to the south circle in a high arc overground

At 12:48 (17 minutes before Solar Noon) the water-based Earth Energy Dragon currents at Avebury (including Mary and Michael) started expanding and contracting their bands in a similar way to how Mave has observed this happening many times at her home location.

At 12:49 (16 minutes before Solar Noon) the Mary and Michael Dragon currents descended into the Energy Drain at the Cove. Mave experienced a "sickly void-like feeling" in her Solar Plexus.

At 12:50 (15 minutes before Solar Noon) Mave noticed that a stone some distance from the Cove, which appeared to be between the two larger stones from her vantage point, was somehow involved and stood on one of the water lines radiating from the Cove.

At 12:51 (14 minutes before Solar Noon) Mave felt a big sucking down of underground water back towards the south circle where the Yin Spring energies were.

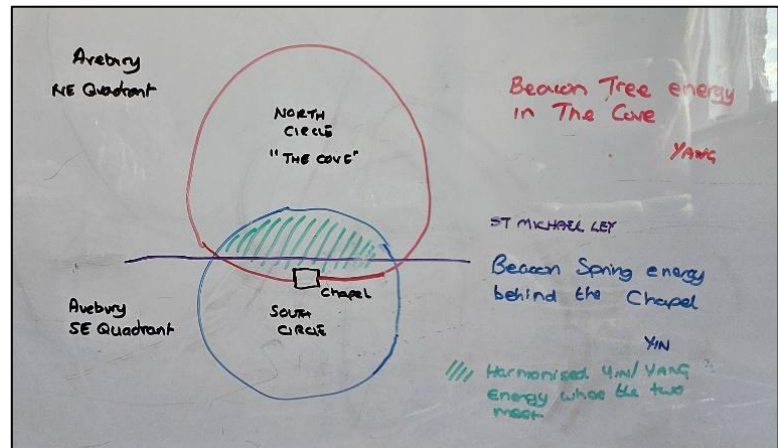

At 12:52 (13 minutes before Solar Noon) Mave experienced a lot of energy being fed into the Cove along the 8 incoming flat water energy lines. Simultaneously the torus under the Cove developed around the Energy Drain in the middle and started spinning clockwise whilst getting bigger.

At 12:53 (12 minutes before Solar Noon) the clockwise spinning torus was now wider than the north circle (Solar/Yang) had been. There was another similar sized Torus in the south circle (Lunar/Yin) spinning in the opposite direction (anticlockwise).

SESSION 5 BEACON TREE ENERGIES - RESULTS

At 12:55 (10 minutes before Solar Noon) the two toroids expanded to become a 3D Viesca Piscis with the St Michael Ley and some of the houses and road at the centre of the two. See whiteboard diagram.

Mave noted that the energies of the former Obelisk close to the Beacon Spring energies don't seem to play a part.

At 12:56 (9 minutes before Solar Noon) Mave observed that the energy building up in the centre, or eye of the 3D vesica, which contains a harmonious balance of Yin and Yang energy, is what will be broadcast by the communicator stone at the end of this process.

At 12:58 (7 minutes before Solar Noon) the two toruses sank below ground with the woven harmony energy in the centre. They then rose high into the sky before returning to ground level then dissolving whereupon all went quiet.

At 12:59 to 13:03 (from 6 to 2 minutes before Solar Noon) Mave noted than everything was eerily quiet [this tends to be when Mave is unable to dowse the Capped Vortices and water-based energy lines that we now know have been taken into the Elemental realm]

At 13:04 (1 minute before Solar Noon) Mave noted that the sphere rose up high above the communicator stone at the Cove again and started to spin very fast anticlockwise becoming a donut shaped toroid like it had done 20 minutes ago. Everything was returning to normal now and feeling clearer and cleansed.

13:05 SOLAR NOON

Mave then moved to sit in the peace garden behind the Chapel at Avebury which is close to the Beacon Spring energies, to eat her lunch. When she first arrived she observed that it didn't feel particularly peaceful.

At 13:23 (18 minutes after Solar Noon) Mave noted that the Beacon Spring energies were still underground and were just starting to bubble up almost like a belch.

At 13:25 (2 minutes after Solar Noon) The Beacon Spring energies started to come back after which time everything started to feel peaceful. It looks like the Beacon Spring energies stayed below ground for a further 20 minutes after Solar Noon.

SESSION 5 BEACON TREE ENERGIES - RESULTS

Note 1: Although this gives a good insight into the bigger picture of what is happening during these transition periods, we need to remember that Avebury has very few trees around where the north and south circles are and Mave did not dowse for all the Capped Vortices where trees used to stand, so the part that trees play in this process, other than the pure Beacon Tree energies at the Cove, are not included in these particular observations.

Note 2. Avebury is a stone circle whereas the majority of Mave's research has been carried out in her own garden and the parkland surrounding Newstead Abbey so there may be some differences due to the nature of the sites with the presence of the stones adding an extra layer of complexity.

Mave then channelled some information from her Higher Self about Weaving Beings [earth elementals similar to Gnomes or Goblins who are responsible weaving energy from Sunlight into the various energy lines]

“Weavers’ afternoon nap between Solar Noon and 15:15 BST approx. 2 hours and then start weaving again ready for the Sunset broadcast. Start weaving directly after Sunrise for the Solar Noon transition period then at 15:15 for the Sunset Transition period. No weaving at night so the gnomes can go out to play. The weaving beings don’t usually come above ground in daylight. The Sun is not good for earth dwellers. However, some snooze on the top of their mounds if it is not a sunny day. No afternoon nap in winter as there is less light to weave with.”

Mid-Afternoon Transition Period at Avebury Stone Circle

Mave then observed the Mid-Afternoon Transition period while sitting in what was the south circle with the Yin Beacon Spring energies.

At 14:45 (15 minutes before the mid-afternoon transition period begins) Mave observed the Beacon Spring “Christmas Tree” energies to be a spiral on the ground (but not a conventional geospiral) with a dome of vertical blue energy rising above the centre and 7 very thin yellow lines of energy leaving the dome at different heights and looping around.

At 14:54 (6 minutes before the mid-afternoon transition period begins) the energy feature was still in place but there was no incoming connection from Silbury Hill and the water dome below ground didn’t seem to be pulsating anymore.

At 14:56 (4 minutes before the mid-afternoon transition period begins) Mave felt that the energies were weakening including the arc to the Beacon Stone.

From 14:57 to 14:49 (3 to 1 minutes before the mid-afternoon transition period begins) the energies were still preset but weaker

At 15:00 (when the mid-afternoon transition period begins) the energies started sinking.

SESSION 5 BEACON TREE ENERGIES - RESULTS

At 15:01 (1 minute after the mid-afternoon transition period began) the energies were sucked underground

From 15:09 to 15:11 (9 to 11 minutes after the mid-afternoon transition period began) the energies were still down.

At 15:11 (11 minutes after the mid-afternoon transition period began) Mave felt a bubbling and pulsing underground along with an air of expectation and the Sun came out.

At 15:12 (12 minutes after the mid-afternoon transition period began) the energies returned with a Whoosh and the Beacon Spring energies with their looped lines (identified as Aquastatic energy by Ali Denham) had returned, unravelling from the vertical dome. They reconnected with the Cove energies. Merry weaving resumed at Silbury Hill with the line connecting to Silbury reappearing.

Silbury Hill

Silbury Hill dowses as a functioning Weaving Mound (among its many other functions) This is a mound where, according to Natasha Hoffman, an Earth Elemental Being such as a gnome or goblin is responsible for weaving energy into all the energy lines. There are many of these mounds around Britain including Micklebarrow Hill in Nottinghamshire and also the mound on which Annesley Old Church near Newstead stands. This project is showing that these Beings weave the esoteric colours in Sunlight into the energy lines.

Mave's Higher Self informed her that Weaving Beings take a nap between the start of the Solar noon transition period and the end of the mid-afternoon transition period. This potentially means that while Green and Yellow are the prevalent colours in Sunlight no weaving takes place. The mid-afternoon transition period starts when the predominant colour in Sunlight becomes orange. Interestingly orange is the colour associated with purging and the late Dr Robert J Gilbert taught in his Spiritual Science courses that when a human being is about to urinate or defecate, there is a surge of orange energy around their lower abdominal area.

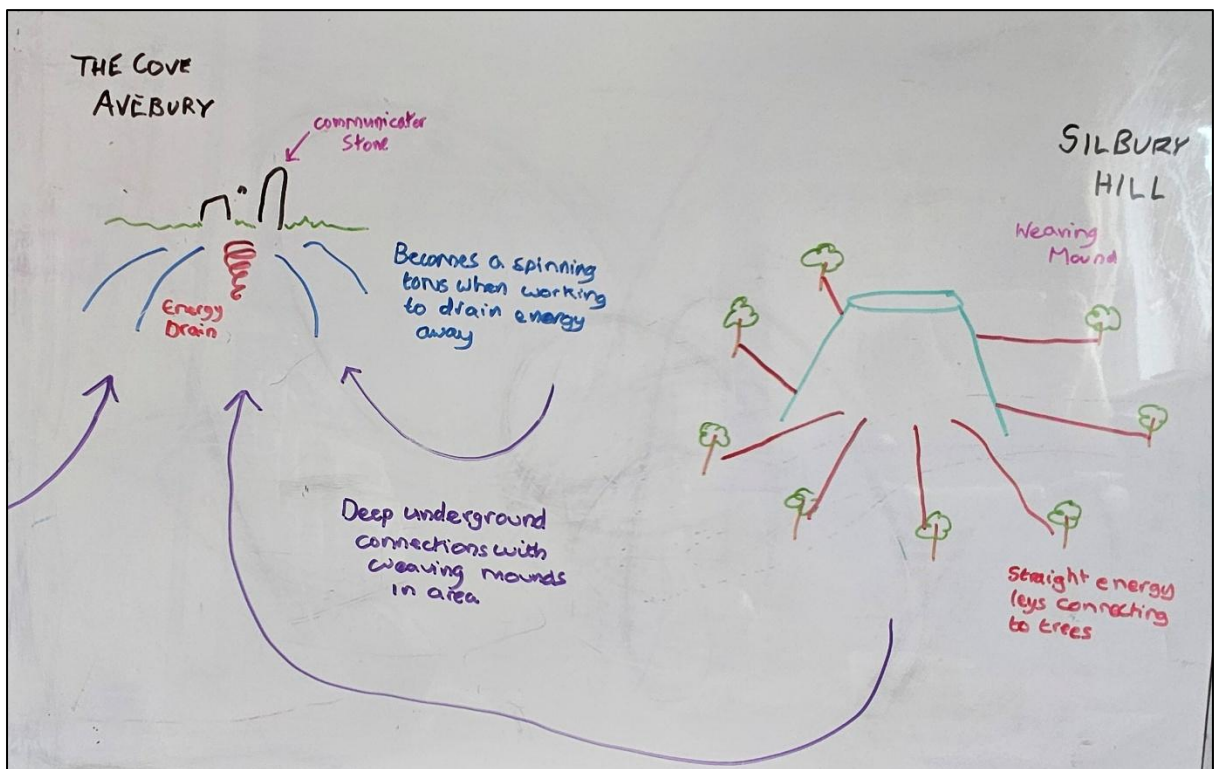

In 2017 Mave circumnavigated Silbury Hill and found many overground energy lines running at one metre above the ground radiating from it, some of which eventually connected with trees. Mave also observed that in addition to these overground lines, there were deep underground lines connecting Silbury Hill with other weaving mounds in the area.

SESSION 5 BEACON TREE ENERGIES - RESULTS

Solar Noon at Silbury Hill

On 2nd June 2025 Mave sat on some benches between Avebury and Avebury Trusloe where there is an uninterrupted view of Silbury Hill. From here she could use the dowsing by eye technique to observe the various energy connections and changes in energy around Silbury Hill during the Solar Noon transition period. In 2017 Mave had sat here to observe the Sunrise and Sunset Solar transition periods. However, at that time she was not aware of Beacon Trees and Beacon Springs/Wells and what part they play in this process. The whiteboard diagram shows how Silbury Hill appeared to be connected to the Beacon Tree energies at The Cove and to other weaving mounds in the area.

Observations

At 12:20 (45 minutes before Solar Noon) Mave observed many straight overground Energy Lines connecting Silbury Hill with various places in the surrounding landscape, including one that passed right next to the bench on which she was sitting and connected with a tree. Maria Wheatley's late father, Denis Wheatley, observed that Silbury Hill is an orgone generator which means that it is made up of alternate layers of organic and inorganic materials which helps to produce what Wilhelm Reich termed Orgone energy that is released from the top of the mound periodically. She was told by her Higher Self that Silbury Hill is also a portal for the Shining Ones and that "weaving is currently in progress"

SESSION 5 BEACON TREE ENERGIES - RESULTS

At 12:24 (41 minutes before Solar Noon) Mave observed that the atmosphere was peaceful with birds singing and butterflies. She got the feeling that the weaving process was slowing down and her Higher Self told her that the Weaving Beings were “packing up for lunch”

At 12:25 (40 minutes before Solar Noon) Mave got a vision of Elemental Beings packing up, putting things away and getting out their day beds.

At 12:26 (39 minutes before Solar Noon) Mave was aware of a tall Being walking towards Silbury Hill from the Beackhampton area to the SW of Silbury Hill. It appeared to be a male Giant and he entered the hill through a portal in the side.

At 12:27 (38 minutes before Solar Noon) a Being who seemed to be called Lady Morwenna exited the Adam and Eve stones portal at Beackhampton and started to drift towards Silbury Hill. Her Higher Self told her that the Weaving Being was effectively saying “I’ve done my bit, time for a snooze”

At 12:28 (37 minutes before Solar Noon) Mave observed that the atmosphere was no longer as peaceful and there was a sense of getting readiness. The floating silver lady entered the mound of Silbury Hill on its east side through the same portal as the Male Giant had done two minutes previously.

At 12:29 (36 minutes before Solar Noon) It felt to Mave that there were levers being pulled by the two Beings and machinery clicking into place. All the Energy Lines whose energy had been radiating TOWARDS the mound now radiated AWAY from it.

At 12:30 (35 minutes before Solar Noon) Mave could feel the wave of Solar Noon transition periods starting in the East and gradually moving towards her current location in a kind of Mexican Wave or tsunami rolling around the globe as locations to the East of her gradually reached the point where the Sun was at its transit (highest point) for the day.

At 12:32 (33 minutes before Solar Noon) As a crow cawed, Mave sensed the underground connections to the Beacon Trees energies and the Beacon Spring/Well at Avebury starting to dissolve.

At 12:35 (30 minutes before Solar Noon) As a helicopter passed overhead, Mave sensed that the Energy Line flowing beside the bench she was sitting on had tightened up and had no spirals around it. She had previously observed this Energy Line in 2017 when it was running between the two benches.

At 12:36 (29 minutes before Solar Noon) Mave started to feel a pressure in her head, a pulsating in the overground energy line, a pulsating underground and observed that her so-called Tinnitus had ramped up.

At 12:37 (28 minutes before Solar Noon) Mave observed lots of bird song.

SESSION 5 BEACON TREE ENERGIES - RESULTS

At 12:38 (27 minutes before Solar Noon) Mave observed that it felt quiet despite the sounds of nature and something was happening to the lines that radiated away from Silbury Hill. The connections seemed to be underground now rather than through the side of the mound. It seemed that there was now a circle around Silbury Hill stopping the energy lines from entering through the side as they normally did. They seemed to dip down underneath the ground just before they reached the mound. [This is reminiscent of the cylinders that form around trees and Capped Vortices at New and Full Moon and also the cylinder that forms around Blind Springs on Harmony days directly before the Equinoxes and Solstices].

At 12:40 (25 minutes before Solar Noon) Mave observed a torus forming around Silbury Hill. It was rotating anticlockwise and rising slowly.

At 12:41 (24 minutes before Solar Noon) The torus round Silbury Hill was still spinning slowly. Mave could sense a flat layer of water below ground.

At 12:43 (22 minutes before Solar Noon) The torus around Silbury Hill was getting bigger and faster. The Energy Line passing by her that connected with a tree was almost transparent.

At 12:44 (21 minutes before Solar Noon) The circle around Silbury Hill started widening out and the straight energy lines were being pushed back and underground.

At 12:45 (20 minutes before Solar Noon) The Spheres above the Beacon Tree in Avebury Manor Gardens and the Beacon Tree energies at the tall thin stone in The Cove in Avebury stone circle rise up and start spinning anticlockwise becoming donut shaped. The tree lines are now flowing underground AWAY from Silbury Hill. Polarities have reversed.

At 12:47 (18 minutes before Solar Noon) It felt very quiet where Mave was sitting because the activity was all happening around Beacon Tree and Spring energies in Avebury itself who are being sent the energy from the Silbury Hill via the underground arcs.

At 12:49 (16 minutes before Solar Noon) Mave realised that the Mary Dragon Current that had normally flows through Silbury Hill had shifted to one side some time earlier, so it was outside the torus that formed around the hill. [This is reminiscent of how Hugh Newman of Megalithomania describe the Mary current once swerving around the side of a crop circle near Wandlebury in Cambridgeshire]

At 12:50 (15 minutes before Solar Noon) The torus had expanded so it was now in the field in front of Mave. She was just outside it. The torus now had a radius of around 0.8 miles.

At 12:51 (14 minutes before Solar Noon) Mave observed a puff of plasma coming out of the top of Silbury Hill consistent with it being an Orgone generator that periodically releases orgone or plasma.

SESSION 5 BEACON TREE ENERGIES - RESULTS

At 12:52 (13 minutes before Solar Noon) Mave noted that all the activity was now happening at Avebury.

At 12:53 (12 minutes before Solar Noon) Mave felt that the two ethereal Beings had been sucked below the hill.

At 12:54 (11 minutes before Solar Noon) Mave sensed that the flat water below Silbury Hill felt energised like an electric current. She started shaking and twitching, mostly her legs. [This could have been a reaction to the energies of the energy line passing through the bench she was sitting on and/or underground water lines]

At 12:55 (10 minutes before Solar Noon) Mave felt a pulsating between her ears.

At 12:56 (9 minutes before Solar Noon) Mave sensed a stillness and wrote in her journal "It feels like they bare packing away in the mound [Silbury Hill] The Yang Giant and Yin Lady have now done what they needed to and are embracing"

At 12:57 (8 minutes before Solar Noon) Mave observed the torus around Silbury Hill shrinking and starting to get smaller. She sensed that it would become a sphere in the divine centre of the mound at the end.

At 12:58 (7 minutes before Solar Noon) Mave observed that each time the torus breathed in and out in became gradually smaller. Her legs started shaking again.

At 12:59 (6 minutes before Solar Noon) the church bell at Avebury sounded the hour with a single "dong"

At 13:00 (5 minutes before Solar Noon) the etheric lady and the Giant rose to the top of Silbury Hill like a Bride and Groom on top of a wedding cake. They appeared to be dancing and weaving Yin and Yang energies together.

At 13:01 (4 minutes before Solar Noon) Both Beings started sinking back inside the mound holding hands. The Weaving Being was still fast asleep.

At 13:02 (3 minutes before Solar Noon) Mave observed the etheric double doors that the two ethereal beings had previously entered by opening up in the side of the hill before beginning to drift together back towards the Adam and Eve stones at Beckhampton

At 13:03 (2 minutes before Solar Noon) Mave found that she was shaking again

At 13:04 (1 minute before Solar Noon) the overground energy lines were back and flowing TOWARDS Silbury Hill. The torus around Silbury Hill had gone. The lines suddenly reversed polarity to radiate AWAY from the Hill again. The Mary Dragon current now flowed through Silbury Hill again.

13:05 SOLAR NOON

SESSION 5 BEACON TREE ENERGIES - RESULTS

APPENDIX 2 – PAULA NORMAN’S 3PM INFORMATION

This is Information received from Paula Norman of the Dowsing Research Group. It involves her own research into sleep patterns and the Gaia Hypothesis which shows how human physiology and that of plants is affected mid-afternoon.

This is a summary of Paula’s information:

✦ Regarding humans, much research has been carried out around circadian rhythms and metabolism across different populations. The body's internal clock gives us a daily pattern in alertness, dipping at about 3pm. Where people live for days without clocks, daylight or meal cues we notice this afternoon dip is naturally built into our biology.

✦ From a chronobiology perspective, 3pm is when the internal clocks of many diurnal organisms trigger peak levels of noradrenaline, body temperature, and cellular respiration within muscle mitochondria. It is the optimal window for both movement and intensive physical activity.

✦ In the context of Earth systems (Gaia hypothesis), 3pm is a pivotal hour marking the global peak in planetary metabolism. At this time, peak solar irradiance drives maximum photosynthetic activity, while terrestrial biological clocks dictate peak metabolic rates and oxygen production. Think of the Diurnal rhythm of Gaia, the significance of this hour for the biosphere stems directly from atmospheric and circadian dynamics.

✦ Maximum photosynthetic yield, by 3pm temperatures and light intensity reach an optimal daily threshold, allowing for maximum stomatal opening and carbon dioxide assimilation in most vegetation. This makes the mid-afternoon the most crucial time for terrestrial plants to draw down atmospheric carbon and synthesise glucose.

✦ Peak oxygen production, because photosynthesis is operating at peak capacity, 3pm frequently coincides with the highest daily rate of oxygen emission into the troposphere, driving Gaia’s atmospheric homeostasis.

✦ Land plants use deep roots to stay hydrated and at 3pm forests hit peak velocity capitalising on maximum sunlight, driving peak carbon dioxide drawdown and oxygen release.

✦ Through the lens of Earth Systems Science, the peer-reviewed framework of the Gaia hypothesis, this rhythmic afternoon pulse is a testament to the cybernetic regulation of the planet. Living organisms dynamically alter their environment. The 3pm metabolic peak represents the biosphere working in unison to regulate atmospheric composition, proving that life and the physical planet act as a single, highly interconnected system.

SESSION 5 BEACON TREE ENERGIES - RESULTS

APPENDIX 3 - GORDON FIELD'S RESEARCH INTO TREES, WATER & ENERGY LINES

Introduction

Gordon Field is the Artist Tree Dowser from SW England who first introduced the concept of Beacon Trees to the Dowsing community. There follows a summary of his excellent research taken from the emails that he sends to Tree Guardians. This re-iterates how trees, water and water-based energy lines are interconnected and how these energies are evolving over time.

Gordon's website is [artist tree dowser | The work of Gordon Field Artist and Tree Dowser](#)

My additional comments are in square brackets.

Mave Calvert, Sherwood Forest, July 2026

“When I first started dowsing the maps, Beacon Trees were few and far between. Now there are many more of them along with Beacon Springs and Wells.” - Gordon Field

Definitions

Height – from the top of the tree's canopy to the base of its roots.

Beneath the Earth there are flowing powerful, tidal bands of water-based energy. Where the centres of three or more these bands cross there are often very powerful trees, springs and wells known as **Beacon Trees** and **Beacon Springs/Wells**.

A **Beacon Tree** is a tree with a large, unique energy field that allows it to ground incoming cosmic energies into the Earth. These energy fields have been growing in size and strength over the past decade or so. The lateral energy fields go around, above and below the tree in the form of a large bubble of energy [probably a torus]. Each Beacon Tree also has a vertical Vortex of energy which follows the edge of its canopy travelling above and below the tree. Since 2016, Beacon Trees have golden cones of energy around them which extend upwards by 36 heights and now 6,912 heights below them. Gordon was shown a golden triangle and a circle of blue with an edge of gold. These cones act as antennas and overlap one another.

[To put this in context, the energy field of a large Oak Beacon Tree with a height of 50 feet would penetrate 65 miles down into the Earth. This is approximately 1/60th of the estimated distance between the ground and the centre of the Earth]

In Britain Gordon found that the Beacon Trees originally tended to be male Oak trees of varying ages and sizes. [We are now finding that other species of tree that have rooted in

SESSION 5 BEACON TREE ENERGIES - RESULTS

the energies of what was once an Oak Beacon Tree can also be Beacon Trees as well as Yews]

These mighty Oak trees were once the meeting places where humans would communicate with these trees [many of these are now places where religious edifices stand]

There are also places where the physical Beacon Trees have been removed yet still exist in **pure energy form** which is still present and growing incrementally alongside that of the living trees. [This is sometimes the case with Churches with spires, other tall buildings and the tallest standing stone at a megalithic site. The energy appears to still need a physical structure to climb and form around]

Mave Calvert has found that at the end of the Solar and Lunar Transition periods communicator Trees, and the Vortices of pure energy in which these Trees once stood, broadcast energy throughout the surrounding landscape. In September 2022 Gordon Field remote dowsed the communicator Vortex in Mave's living room at her home on the edge of Sherwood Forest where members of the Earth Energies Zoom group dowsed that there had once been an Oak Beacon Tree. Gordon confirmed that this remains a fully functioning Beacon Tree energy. He said that the centres of four one-mile-wide bands of energy cross at the centre and the lateral energy field ranges from just over half a mile to just over three-quarters of a mile. It also has the cone of energy that rises to 36 heights above and an increasing number of heights below.

Each Beacon Tree is associated with a Female/Yin **Beacon Spring or Well** through which the incoming cosmic energies are grounded into the water.

Gordon talks about the **Elemental Web** which flows beneath us. This is the network of tree and plant roots along with the fungal filaments. It is connected to the water-based energies that flow around us and encircle the Earth. The increases in the energies of the water have strengthened the Elemental Web.

Tree Deva is a term used by Gordon Field to describe trees that are effectively the Shining Ones of the forest that help strengthen Earth's Biosphere by collecting and then releasing energy through the phases of the Moon. Whereas Beacon Trees tend to be male, Tree Devas can be either male or female trees. In 2016, Gordon observed that the Tree Devas became surrounded by the same golden light that spirals around the cone of energy that envelops Beacon Trees. The canopy of the tree, its trunk and roots below are a ball of golden light [probably a torus]. As well as a ball of light, they also have energy fields that go around them. Initially these formed just above the ground and varied in size depending on their contact with us and all other creatures. However, Gordon has found that the energy fields of Tree Devas are now 7 heights above the ground.

SESSION 5 BEACON TREE ENERGIES - RESULTS

The energy field of a Tree Deva **fluctuates with the phases of the Moon**. It spirals out from the tree a day at a time and reaches the edge of its overall energy field after seven days. Then the bands of energy retreat day by day rising up into the Biosphere. At first these spiralling bands were only the height of the tree, but with each increase in energy they went higher, and the energy now rises up to three heights above and goes down below the tree for two heights.

With the annual increases in energy that Gordon has observed, some Tree Devas have transformed into Beacon Trees.

[Note: the term 'Deva' should not be confused with the same word sometimes used for Spirits attached to a Tree, local guardians or Elemental beings.]

A **Beacon Tree Portal** is a specific configuration of 6 Beacon Trees that Gordon has noted. As part of a set revolving sequence, each one of these six Beacon Trees will have direct contact to the energies that normally arrive at the Winter Solstice for one day. With the increases in energies other trees are beginning to appear including one that is active at each New and Full Moon and one that has continuous access to these energies.

Incremental Increases in Tree and Water Energy noted by Gordon Field

Over a period of ten years from 2016 to 2025 energy from deep in the Cosmos arrived at the Winter Solstices. From 2016 to 2024 cosmic energy entering via the Beacon Trees transformed the tree energies. From 2017 to 2025 cosmic energy entering via the Beacon Springs and Wells also transformed the water energies. The increases were staggered to help us integrate them. [Winter Solstice in the Northern Hemisphere is the time when the Earth is facing galactic centre, which is the gravitational heart of the Milky Way galaxy.]

At the **Winter Solstice of 2012** the Vortex of energy surrounding the Beacon Trees grew to 36 tree heights above and below them.

On 28th September 2015, a week after the Equinox, there was another a dramatic increase in energy during the conjunction of a Lunar Eclipse and a Red Moon.

At the **Winter Solstice of 2016** the Beacon Trees developed a cone of golden energy around themselves and the Vortex that already surrounded them. The apex was at the top of the Vortex, and the base of blue was 36 heights below each tree. Gordon was shown a golden triangle and a circle of blue with an edge of gold.

At the **Winter Solstice of 2017**, as well as entering the trees again, the incoming cosmic energies also entered the Beacon Springs and Wells. This energy activated the waters revealing more of the water-based Energy Lines that flow below and on the Earth forming the Elemental Web.

Since the first increase in 2016 the below ground energies have approximately doubled in depth each year while the above ground energies remain at 36 tree heights. At the

SESSION 5 BEACON TREE ENERGIES - RESULTS

Winter Solstice of 2022 the energy cone of the Beacon Trees was 1,728 heights below ground and by June 2024 it was 3,456 heights below.

The 9th and final increase in Tree energies occurred at the **Winter Solstice of 2024**. The energies now go down 6,912 heights below the Beacon Trees. At their bases these cones form an interconnecting energy field below the Earth's land masses and some sea areas.

At the **Winter Solstice of 2025** the 9th and final increase in the Water energies took place, this time only the water was enhanced rather than the Beacon Tree energies. A series of Lunar events helped calm these energies and helped us to adjust to and integrate these energies.

Gordon Field on Energy Lines

Through Google Earth and map dowsing Gordon has located a number of 3-mile-wide Energy lines encircling the Earth that create a network of water-based Energy Lines via the North and South poles. He also found 2-mile-wide Energy Lines some of which are River Lines that flow from one River Estuary to another and others that are pairings of Energy Lines.

The other main lines that Gordon has dowsed are one mile, three-quarters of a mile and half a mile wide. Starting at a quarter of a mile wide there are many other smaller lines that go down to a microscopic level. Gordon has found that the number of these lines is growing as the energies of the Beacon Trees and Beacon Springs/Wells are enhanced by the increments of cosmic energy at the Winter Solstices.

All these Energy Lines are water-based Energy Lines, and their edges are in a constant state of flux as they are tidal and change from day to day, overlapping with each other. On the advice of the trees, Gordon therefore only maps the centre of these lines.

The centres of a group of these main lines naturally cross where the Beacon Trees, Beacon Springs and Beacon Wells are located.

Gordon tells us that this web is very different to the magnetic and other webs of energy that surround us because it is the Elemental Web formed by water.

Links with Solar/Lunar Cycles & Mave Calvert's 2026 Dowsing Research Project

The incremental energy increases began in the lull between Solar Cycles 24 and 25, increasing in momentum as the powerful Solar cycle 25 grew to its peak in 2025 coinciding with the Major Lunar Standstill (Lunistice) which peaked at the March Equinox of 2025.

Mave had researched the Solar and Lunar transition periods quite intensively for most of 2015 and 2016. However, in 2017 she stopped doing this as the effect on her energies was increasingly chaotic and not beneficial to her since the energies seemed to be going through rapid transformations. At this time Mave noticed that the Energy Dragon currents

SESSION 5 BEACON TREE ENERGIES - RESULTS

that recharge themselves at the Blind Spring in her garden often changed with new ones arriving and then leaving again and existing ones undergoing a metamorphosis. Concurrently, new Nodes appeared along the Ley System known as the Equinox Line which stretches between Anglesey and the Lincolnshire coast, the male strand of which has always flowed through Mave's garden. Chris Tonge also noticed changes at that time with Energy Lines that he was familiar with suddenly starting to reverse gender at Half Moon.

Mave was not inspired to pick up the research into the transition periods again until 2026. In hindsight it seems that she was stopped from tuning into these energies during the period of turbulent energy increases from then end of 2016 to the end of 2025 that Gordon Field has brought to our attention. During this break from researching the transition periods Mave became much more familiar with the electric universe, plasma, the energies of water, trees and the existence of Elemental Beings. Concurrently, through collaboration with members of the Earth Energies Zoom group that originally formed as a development and research group during the Covid Lockdown, she learned a great deal about the structure and nature of Earth Energies and how they fit in with plasma and the Electric Universe. Mave met Gordon Field for the first time at the BSD conference in 2022 and was humbled to be invited to become one of his growing army of Tree Guardians who are appointed not by Gordon but by the trees themselves.

Mave was inspired to set up the Newstead Dowsing Research Project after attending her first Dowsing Research Group Zoom meeting in November 2025. The project took shape in her mind over 24 hours and seemed to have been divinely inspired by the combined consciousness of the natural world - Angels, the Spirit of Water, Trees, Dragon Currents and Elemental Beings. It would seem that Spring 2026 was the perfect time to resume research into the transition periods once the increases in Tree and Water energies was complete and the energies had calmed and stabilised sufficiently to be dowsed safely once more.

“Everything around us is changing from day to day” – Gordon Field
