

SESSION 3 EARTH ENERGIES - RESULTS

This document details the results of Session Three of the Newstead Dowsing Research Project that took place in June 2026. The session focussed on Earth Energies. The main highlights are summarised on pages 4 and 5. This is followed by a detailed analysis of the findings. The Appendices contain the data sheets submitted by individual Dowsters.

SESSION 3 EARTH ENERGIES - RESULTS

OVERVIEW OF PROJECT

Aim of the Project

The aim of this dowsing research project is to explore different aspects of tree, water, and earth energies and to investigate how the different aspects are interconnected, as well as how they are affected by sound-based stimuli, crystals, the Solar Noon transition period (the 20-minute period leading up to Solar Noon), the mid-afternoon transition period (3pm to 3:15pm), the periods surrounding New & Full Moon and the periods surrounding the Equinoxes and Solstices.

A team of Dowsters led by Mave Calvert is working on the ground in the parkland surrounding Newstead Abbey in Nottinghamshire. Other individuals and groups are carrying out parallel research in other locations.

One of the aims of this research project is to investigate Mave Calvert's ideas about these energies and try to prove, disprove and/or revise some of these ideas and hopefully find other interesting things as well.

The project documentation can be found on Mave's dowsingsherwood.com website:

[Research Project \(List\) | The Sherwood Dowser](#)

As well as the Project Summary and details of each individual themed session, there is a document containing the pendulum dowsing charts, a document containing information about the location, geology and a brief history of the Newstead area, and documents giving opportunities for dowsters to do some remote/map dowsing and monitor some energies in their own home and garden.

Session 3 – Earth Energies

The third of 8 project sessions took place in June 2026 and focussed on Earth Energies and their relationship with underground water. The participating Dowsters were:

NEWSTEAD TEAM 13/6/2026

Mave Calvert, Maria Hale, Kate Richardson, Sian Wilson, Deb Bowater

DOWSTERS WORKING ELSEWHERE

Sare Bassett in Reigate Priory Park, Surrey 14/6/26

SESSION 3 EARTH ENERGIES - RESULTS

SUMMARY

✦ Dowsers seem to find differing numbers of bands in energy lines according to their levels of sensitivity. Those with lower levels of sensitivity don't always find the outer bands which are higher frequency than the inner ones. This suggests that there are likely to be even more bands to these Energy Lines that are too high frequency for any Dowser to detect

✦ Given that the bands in Energy Lines are not of consistent width, this would suggest that just like the geodetic patterns we found around blind springs, energy lines are probably elliptical in shape and not perfectly balanced on either side of centre.

✦ Energy Lines and the individual bands within them are all comprised of White Light which can be split into whatever colour frequency and proportion of Yin/Yang energy that is appropriate at any one time for whatever that band is interacting with in the landscape. This is consistent with the findings from Session One about Trees interacting with each Dowser differently and simultaneously communicating whatever vibrational colour frequencies were appropriate for each individual person for healing (cleansing, re-balancing and energising) purposes. It seems that Energy Lines are also capable of this.

✦ One of the Energy Lines whose job it is to take non-beneficial energy to water for transmutation was investigated. It was found to contain all predominantly Yin bands within it and all these bands were flowing towards the water with varying frequencies, suggesting each picked up energy from a particular frequency band.

✦ We found that Energy Lines use Blind Springs to cleanse and re-energise themselves, dipping underground close to the centre of the Blind Spring. An Energy Line approaching a Blind Spring contains non-beneficial energy. However, when it re-emerges from the ground at the opposite side of the Blind Spring it contains little or no detrimental energy

✦ When an Energy Line approaches a Blind Spring the inner core starts to dip down towards the ground and simultaneously draws in all the bands, so they are tightly wrapped around the core. The coiled-up line drops below ground and is cleansed and energised by the electromagnetic current created by the water dome of the Blind Spring

✦ When a crystal such as snowflake obsidian or magnetite is placed in the centre of an Energy Line the line appears to collapse above the crystal. What is happening is that the inner core of the Energy Line is drawn into the crystal with all the outer coiled tightly around the core.

✦ When a crystal such as amethyst obsidian or quartz is placed in the centre of an Energy Line the energy line expands rather than contracts

SESSION 3 EARTH ENERGIES - RESULTS

✦ Energy Lines have a horizontal central core from 2cm to a metre in diameter depending on the width of the energy line. In many cases this core runs horizontally around 3 feet or 1 metre above the ground. However, in some cases these cores run a bit higher and this means they can seamlessly cross other Energy Lines without the need for a Node.

✦ We investigated the dowseable spirals that exist every so often at the edge of an Energy Line. vortices, some of which dowse as the Capped Vortices that we investigated with trees and underground water. When the Energy Line re-emerges from the spiral it is carry a much lower proportion of detrimental energy. It seems that the two-way electromagnetic current in the spiral created by underground water cleanses and re-energises the line. Does the entire line descend into the spiral or just one of the bands?

✦ During the Solar Noon transition period these clockwise side spirals change polarity and dowsed as being anticlockwise. This is consistent with the polarity reversals that take place at the beginning and end of the Solar/Lunar transition periods

✦ In the last two session with Trees and Underground Water it was noted that there appears to be a build-up process to then Mid-Afternoon transition period. Around 2:45 to 2:55 the Energy Lines expand, contract and then disappear for a few minutes.

✦ Just like the energy fields of Trees, Energy Lines appear to be conscious, constantly in motion and interacting with and responding to their environments including each of the individual Dowzers. They are able to use whatever vibrations and colour frequencies are appropriate to help their environment to remain in balance and harmony including the human beings in that environment.

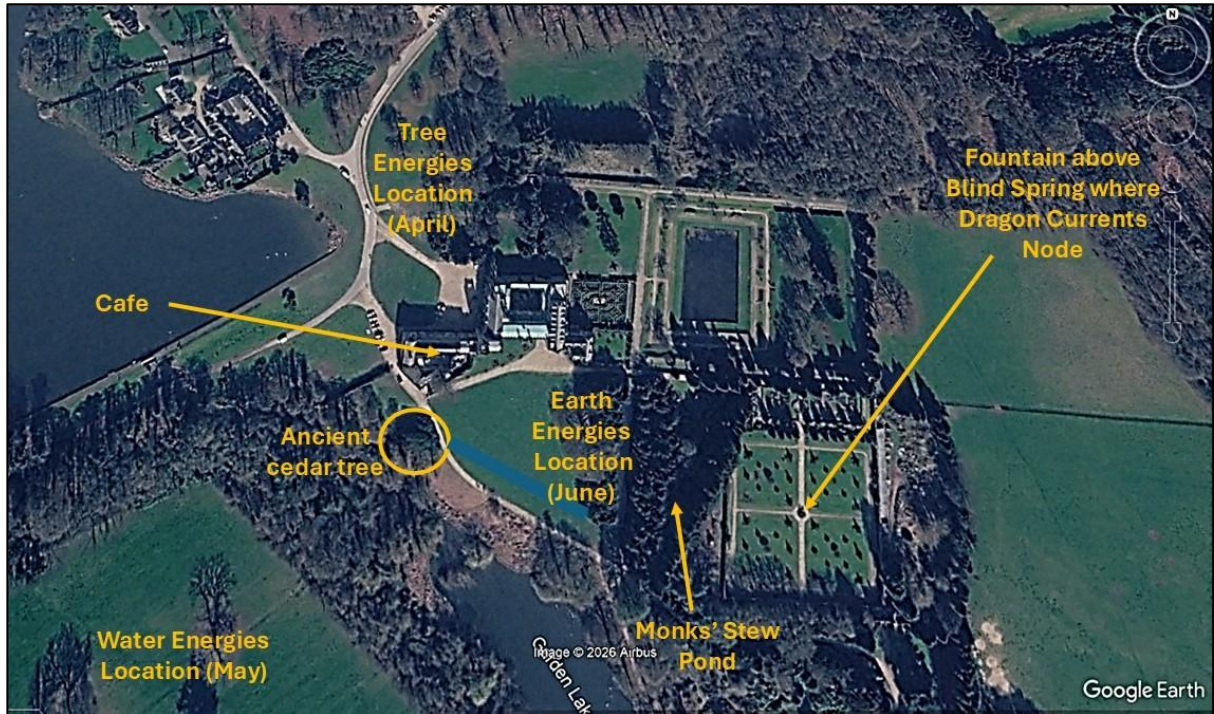

✦ Changes occur naturally during the Solar and Mid-afternoon transition periods which also help to keep the earth energies and surrounding environment in balance and harmony and cleansed through the transmutation of non-beneficial energy.

✦ Because of this constant motion and interaction, it is difficult to produce a reliable set of baseline readings since everything is in constant flux and can differ from moment to moment. However, the fact that this constant motion and interaction takes place shows that the behaviour of Energy Lines displays a higher degree of intelligence/consciousness than the experiments that can be devised to observe them can do justice to.

SESSION 3 EARTH ENERGIES - RESULTS

DOWSING LOCATIONS

NEWSTEAD

The Earth Energies session took place next to the Monks' stew pond in the morning and during the monitoring of Solar Noon. We then returned to the tree energies dowsing location for the afternoon's dowsing and to monitor the mid-afternoon transition period.

SESSION 3 EARTH ENERGIES - RESULTS

REIGATE PRIORY PARK, SURREY

Sare Bassett was dowsing in Reigate Priory Park, Surrey in an area with a flattened barrow on top of Seale Hill with a WW2 bomb crater alongside.

She located an Earth Energy Dragon Current flowing approx. North to South:

GPS 51.230815133613234 -0.21063372205215147

Solar Noon time (local) 12:59

SESSION 3 EARTH ENERGIES - RESULTS

DETAILED FINDINGS

Part 1 - Earth Energy Dragon Currents

NEWSTEAD

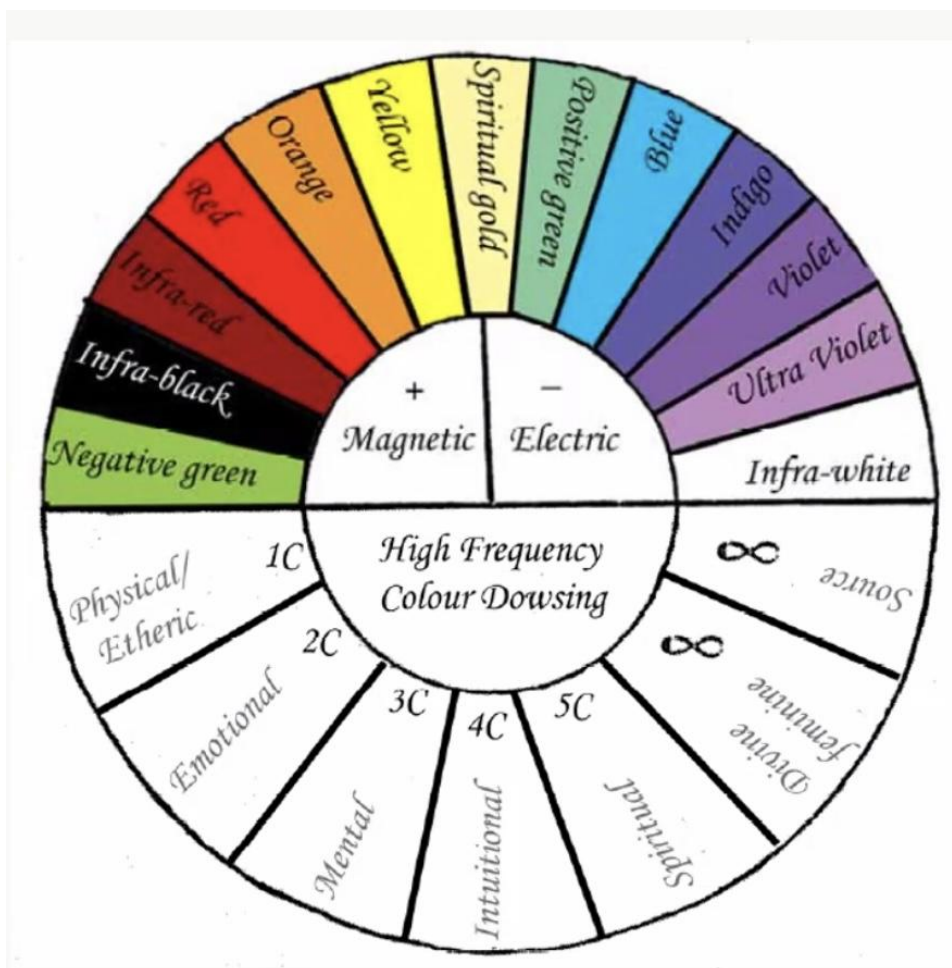

After meeting at the café as usual, we asked our Rods to take us to the best place to find the energies that we were planning to investigate that day. We were led into the landscaped gardens to what is known as the Monk's stew pond. This rectangular pond has pairs of Yew trees lining each side. It was once the medieval fishpond used by the Monks of Newstead Priory. Today it is fed by a Spring at the north end of the pond known as "St Mary's Well" which was referred to in the 1800s as a 'Holy Well.'

We were taken to the western edge of the pond where a Male energy line ran south-north between the yew trees with a Female Energy Line running west to east perpendicular to the Male line. Here we were obscured from view so were able to conduct our research out of site and undisturbed by curious passers-by. Sian, Kate and Deb worked on the Male Energy Line while Maria worked with the Female Energy Line.

SESSION 3 EARTH ENERGIES - RESULTS

High Frequency Colour Dowsing

Mave has found that Energy Lines and the individual Bands within them are comprised of white light and the plasma within them allows the prism effect to split the white light into the various colours of the electro-magnetic spectrum and frequencies that are required for whatever function the Line and/or Band is performing at any one time.

This is the High Frequency Colour Dowsing chart that we are using in the project. It was developed by Maria Wheatley who describes its use in detail in Chapter 8 of her "Divining Ancient Sites" book. Rather than simply dowsing the colour of an Energy Line or Band within it, this chart allows us to determine the frequency of that colour as well.

The frequencies can be likened to the octaves on a piano keyboard where for example each C note sounds different depending on its position on the keyboard with lower frequency/pitch notes at one end of the keyboard and higher frequency/pitch ones at the other.

The colours here are equivalent to the musical notes and the 7 sections at the bottom to the note's position within the octaves. Therefore, we can dowse each colour as having 7 possible frequencies which gives more depth to the research.

SESSION 3 EARTH ENERGIES - RESULTS

Male Energy Line between the Yew Trees

Kate dowsed the Male energy line which ran between the Yew Trees parallel to the edge of the Monks' Stew Pond. She found there to be 4 bands on either side of centre. She dowsed the four bands on the west side of the line (farthest from the water) The 4 bands ran in alternate directions with two running north-south and two running south-north. The Band closest to the core was predominantly Yin with a Bovis of 10,000ub and flowing south to north. The next band out was predominantly Yang with a Bovis of 6,000ub and flowing north to south. These were consistent with Mave finding that many Energy Lines have bands that are alternate Yin/Yang with alternate directions of flow

However, the third band out was very interesting because it dowsed as Infra White, 50% Yin and 50% Yang and a Bovis of 40,000ub.

Kate's findings are consistent with that Band being pure White Light that has not been split into any of the colour frequencies.

SESSION 3 EARTH ENERGIES - RESULTS

A Female Cleansing Line

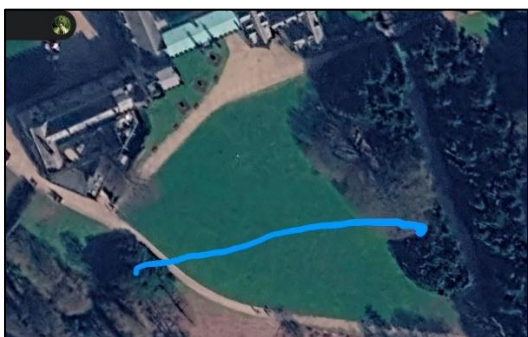

Maria dowsed a Female Energy Line running perpendicular to the Male Line. It had 6 bands either side of centre. She dowsed all the bands for colour frequency, Bovis, direction of flow, %Yin/Yang and %Beneficial/Detrimental energy.

Interestingly, each band was flowing towards the water of the Monks' Stew pond which was around 3 metres to the east of where Maria was dowsing (to the right on the photo). Usually, an Energy Line will have alternate directions of flow within different bands. Also, all the bands dowsed as having at least 50% Yin energy in them, often much more. In many Energy Lines the bands dowse as alternate Yin and Yang.

There was no overall discernible pattern between the bands suggesting they were all functioning independently. They had varying colour frequencies with the lowest frequency colour being positive Green/Mental 3C and the highest Ultraviolet/Spiritual 5C. Bovis levels of the bands ranged from 11,000ub to 18,000ub and all the bands were carrying between 20% and 50% detrimental energy.

The core of this line was running at 4 feet above ground level, one foot higher than the Male Line that it crosses. The two lines cross without Noding and appear to have no interference between them, almost as if they are completely unaware of one another's presence.

Google Earth dowsing by Mave suggests this line comes from the ancient tree Cedar tree on the banks of the River Leen (left on the image) and flows over the grassed area for about 50m terminating at the Stew Pond (right on the image).

On a subsequent visit on 12th July Shaun Holbrow attempted to locate this line but was unable to do so even though Mave and Maria could detect it. We suspected that this was due to its bands all being Yin.

On 22nd July Mave visited Newstead and observed that this Energy Line appears to be created by the ancient cedar tree whose large trunk bends at an angle low to the ground before becoming vertical once more. The energy seems to be coming out of the bent part of the trunk having been brought up from underground by its roots.

Mave suggests that this is one of the lines that funnel some types of non-beneficial energy into water for transmutation. Female or Yin energy is higher frequency than Male or Yang energy and performs the cleansing role.

SESSION 3 EARTH ENERGIES - RESULTS

Dowsing different widths for the same Energy Line

Kate dowsed that the Male Energy Line which ran between the Yew Trees parallel to the edge of the Monks' Stew Pond had 4 bands either side of centre whereas Deb could pick up 8 bands either side of centre. Kate was dowsing with her Rods while Deb was using a combination of her high sensitivity and short copper rods with sleeves.

It is not uncommon for different Dowzers to pick up a different number of Bands or to find differing widths for an Energy Line. Mave has found that generally as you move away from the central core, the Bands become higher and higher in frequency so the outermost ones can often only be picked up by highly sensitive people and not by conventional dowsing tools them.

In a project that Maria is undertaking close to her home she has been finding that she can sense the Energy Line that she has been working with as being wider than her Dowsing Rods show it to be.

Beneficial properties of the different bands of Energy Lines

Deb found the Male Dragon current between the trees to have 8 bands either side of centre. She checked each band asking how beneficial each of the bands were to her personally. The core of the current was 100% beneficial for her to stand in it whereas the 8th band was 0% beneficial. Working outwards from the centre the % benefit to her decreased incrementally from 100% to 80% to 60%, 50%, 40%, 30% and then 0% at the outer edge. Deb reported having a warm feeling when standing at the centre of the line and a chilling feeling when at the outer edge.

In this case it was the high frequency of the Bands that make them less beneficial to sensitive Dowzers rather than any detrimental energy that the Bands are carrying. The higher the frequency the more it can disrupt the Dowser's energy field, causing them to have feelings such as being spaced out, chilled, unbalanced and/or unstable.

Mave finds that the inner core at the centre of an energy line is of the lowest frequency. Consequently, she advises that it is preferable to start dowsing an energy line from the centre and work outwards. This means that the Dowzers can attune to the line more easily while standing at the centre then move out gradually along the bands that are becoming gradually higher in frequency. Turning around at the dowseable outer edge and then moving back towards the centre then allows the Dowser to gradually move from the high frequencies back to the lower ones. Deb's dowsing of how beneficial each band was to her, appears to substantiate this.

SESSION 3 EARTH ENERGIES - RESULTS

Crystal Experiments:

The crystal experiments were carried out at the south end of the energy line that ran between the trees on the western edge of the Monks' stew pond. Sian had dowsed for which crystals to bring. Each was placed in the centre of the line.

All the crystals had different effects. The low frequency crystals caused the line to contract and the core, which was previously at 3 feet above ground level, dipped down into the crystals. With the higher frequency crystals, the core of the line remained at 3 feet above ground level and the line expanded with the participants all feeling an increase in energy. The effect covered an area of around 3-4m and did not appear to affect the rest of the line.

Placing a **snowflake obsidian** on the line caused the Bovis to increase from 3,000ub to 9,000ub. Sian reported feeling tingling" and "glitching" sensations. The core of the energy line which normally runs horizontally at 3 feet above the ground, dipped down into the crystal at both sides.

Placing an **Amethyst** geode on the line caused the Bovis to increase from 3,000ub to 12,000ub. The core of the line remained at 3 feet above the ground. The energies quickly expanded.

Placing a **Quartz** crystal on the line caused the Bovis to increase from 3,000ub to 50,000ub, over four times the increase that the Amethyst had generated. The core of the line remained at 3 feet above the ground. The energies generated by the combination of the Quartz and the energy line became very strong and were easily felt by the whole team. The team felt that the energy had "zipped up gradually" compared to the Amethyst where the effect was instant but not as pronounced. The photo shows how Kate and Sian were able to feel the energies of the Quartz crystal places on the energy line from several metres away.

Placing 3 small, tumbled stones of **Magnetite** on the line caused the Bovis to increase from 3,000ub to 10,000ub. This was very similar to the effect caused by the snowflake obsidian. The core of the energy line which normally runs horizontally at 3 feet above the ground, dipped down towards the trio of crystals, entering the two nearest to each end of the line. The team commented that everything suddenly felt still, quiet and calm.

SESSION 3 EARTH ENERGIES - RESULTS

DOWSERS IN OTHER LOCATIONS

Sare Bassett was dowsing in Reigate Priory Park in Surrey on 14/6/26. She located an Earth Energy Dragon current flowing North-South with 7 bands either side of centre and an east-west wave within it [this is what Rory Duff termed the lateral roll or frequency of an Energy Line and is what comes into harmony across all the lines on the days preceding the Equinoxes and Solstices].

The Dragon line travelled through The Priory building. Sare observed that there was something else going on since there are known caves, graves and a stream that is piped. Sare was advised not to Remote View or dowse these.

There was a Node on the site of original monks' burial ground in central area of the Priory Park. As this was a busy area with a fountain Sare did not dowse it but remote viewed it instead.

Sare also located a Vortex that she described as "a Capped Blind Spring with a Torus". The Blind Spring was present deep underground with water rising and possibly flowing into tunnels/caves in the vicinity.

Overall, the Dragon Current dowsed as 90% Yang and 10% Yin. The Bovis was 15,000ub and the line contained 38% beneficial and 62% non-beneficial energy.

The band of the central core was purple and 3 yards (2.75m) wide and the rest of the bands were 2 yards (1.82m) apart. The bands were alternate Yin/ Yang and were mirrored on either side of centre. The height above ground of the current was 9 yards (8.3m) and the central band dowsed as 2.25 yards (2m) at ground level

Band 1	Purple	Yang
Band 2	Deep Orange	Yin
Band 3	Red	Yang
Band 4	Purple	Yin
Band 5	Sky Blue	Yang
Band 6	Sky Blue	Yin
Band 7	Purple	Yang

Shape of Bands

When dowsing the individual vertical bands, Sare reported that they were all curves, concave both sides towards the central dragon line, and appeared to be symmetrical and part of large torus structure. She commented that the bands resembled concentric tubes around the core, hollow tubes filled with vibrational matter.

SESSION 3 EARTH ENERGIES - RESULTS

Human Interaction

The local Spirit of Place, a female gatekeeper, was very happy to have contact with Sare and advised that something non-beneficial had happened to the Energy Line to the north in a South London park on the line.

Experiments with harmonious and inharmonious stimulation

Sare experiments with crystal and sound-based stimuli as well as giving healing to the line (at the request of the Deva of the land) and checked the Bovis readings each time:

Harmonious Quartz cluster on the line – 18,000ub

Inharmonious Lady Gaga – Abracadabra (reverses sacred words in song) – 4,000ub

Harmonious Singling bowl – 18,000ub

Harmonious – full earth healing to line – 19,000ub

SESSION 3 EARTH ENERGIES - RESULTS

Part 2 – Single Current Nodes

NEWSTEAD

Energy Lines Crossing without Noding

The Male energy line running roughly south-north along the tree line descended into a Vortex in the ground where the Female Energy Line crossed it. However, the Female Energy Line running roughly west to east towards the water of the Monks' Stew Pond did not descend into the Vortex but flowed straight over the Male line with no interaction as if it were not there. The core of the Male Line ran at 3 feet above ground and the core of the Female Line at 4 feet above ground. Mave dowsed that the two were not a pairing. It appears that because their cores are at different heights they can pass over one another seamlessly. Mave has experienced this before, for example at Chatsworth where a Female energy line flows along the River Derwent while the Male energy line flows over the bridge above it.

Mave refers to a Node where only one Energy Line descends into the ground and re-emerges as a "Single current Node." The Male Energy Line dipping into the ground below the Female Line was an example of this.

Side Spirals on Energy Lines

Following the central core of the Male Energy line from north to south between the trees, Deb found that she was zigzagging rather than walking in a straight line. Around the same time, Sian found a spiral Vortex to the west of the line which the core of the line dipped into just like it had with the obsidian and magnetite crystals. Instead of leaving at the opposite side of the Vortex though, the line emerged from virtually the same place as where it had gone underground and returned to its original position.

Deb then went on to find a further three of these side spirals or single current Nodes. Deb and Kate dowsed that when the line descended into these three Nodes (dowsed south to north) it was carrying 80%, 70% and 65% detrimental energy respectively, but when it re-emerged, it was carrying only 0-6% detrimental energy had been returned to the line. This showed that by descending into these Nodes or side spiral the line was cleansed.

Sian sensed that there was water beneath these side spirals and walked around the grassed area between where we were dowsing and Abbey building where she found quite a lot of underground water which may have played a part in the cleansing process when the line descended into the spirals.

Mave recalled Bill Holding, former Chair of the Ridings Dowzers and BSD Earth Energies SIG, once demonstrating how an Energy Line had Spirals every so often along its outer edge. This appears to be the same phenomena.

SESSION 3 EARTH ENERGIES - RESULTS

Part 3 - Solar Noon Transition Period

Mave Calvert has found that during 20 the minutes leading up to the exact time Solar Noon, the energies lines and vortices associated with trees go through a transition phase where they reverse polarity, move very quickly, disappear underground for 3 minutes and then return to normal. The net effect is that they have transmuted any non-beneficial energy that they were holding prior to the transition period.

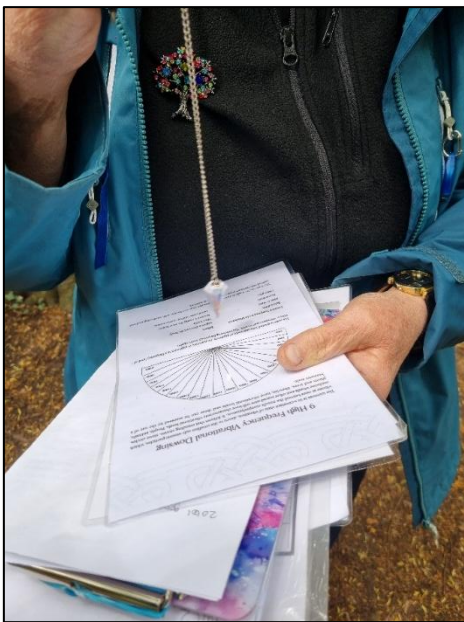

NEWSTEAD

Following the Solar Noon transition period, Maria dowsed that the 12 bands in the female energy line were all showing 100% beneficial energy apart from Band 1 which was showing 80%. This is more confirmation that during the Solar Noon transition period the energy lines are cleansed and re-energised.

SESSION 3 EARTH ENERGIES - RESULTS

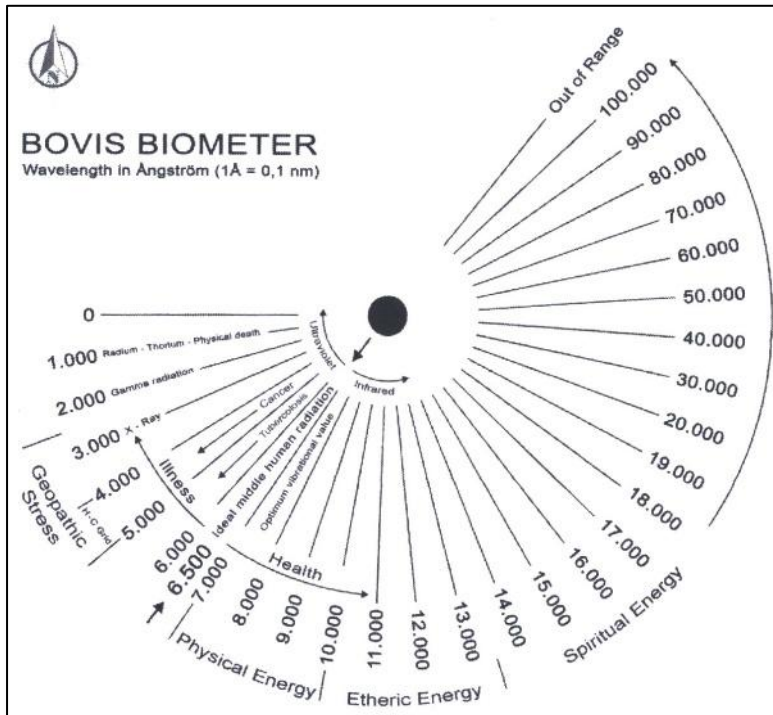

Dowsing the Bovis of Energy Lines

During the Solar Noon transition period Maria was standing several metres south of Sian and Deb on the same Male energy line. Maria found she was getting the same Bovis fluctuations as Sian and Deb but there was a slight time lag. It was as if the contracting and expanding of bands moved along the line like a Mexican wave. This would make sense given that the time of Solar noon is dependent on location. For example, Solar Noon on the east coast of England occurs around 20 minutes before it does on the west coast of Wales which in turn is 20 minutes before it is on the west coast of Ireland. The Sun's shadow traverses the planet very a 24-hour period so it is always Solar Noon somewhere.

Sian was dowsing with a pendulum over one Bovis chart whilst Deb held her small rod over the centre of the circular Bovis biometer from Maria Wheatley's book. Both were obtaining the same readings.

SESSION 3 EARTH ENERGIES - RESULTS

This shows how a small sleeved rod can be held in the centre of a circular dowsing chart and will move around giving the readings in real-time and therefore helping to establish patterns.

SESSION 3 EARTH ENERGIES - RESULTS

Expansion and Contraction of Energy Line Bands

Mave stood in the centre of the Male energy line and used her arms to show when the various bands expanded and contracted. Sian and Deb found that when the bands expanded the Bovis reading rose rapidly, stated coming back down as the band was contracting and then “crashed” meaning no reading could be obtained. At this time Mave’s hands and arms which were being moved by the expansion and contraction of the bands, just flopped down as if there were no longer any energy moving them.

Confirmation of Polarity Reversal

Deb followed the Male energy line between the Yew Trees and re-checked the direction of flow of all the side spiral Nodes during the first part of the Solar Transition period. She found they were all Dowsing the opposite way now. Originally her Rods had taken her in a clockwise circle before going left (west) to the side Node but during the Solar Noon period this changed to anticlockwise. This was Deb’s first project session and Mave had forgotten to mention the polarity reversal at the start and end of the Solar Noon transition period to her so she was bemused by the change and amazed when Mave explained that her dowsing was consistent with the polarity reversal.

Confirmation of Energy Lines being Cleansed during the Solar Noon transition period

After Solar Noon the Energy Line was taking very little energy to these side nodes consistent with it having been cleansed during the transition period. Earlier it had taken 80% detrimental energy into Node 1, 70% into Node 2 and 65% into Node 3 whereas after Solar Noon the amounts were 15%, 5% and 0% respectively.

SESSION 3 EARTH ENERGIES - RESULTS

DOWSERS IN OTHER LOCATIONS

Sare Bassett in Reigate Priory Park, Surrey 14/6/26

Observations during the Solar Noon period

Sare was dowsing during the Solar Noon transition period on 14th June. Solar Noon was at 12:59 in the location where she was dowsing. The Dragon Current was still flowing approximately north to south.

Whereas earlier in the day the current had dowsed as 90% Yin and 10% Yang, it now dowsed as Yang 0% Yin 0%; The Bovis had increased from 15,000ub to 16,000ub; It was now carrying 64% Beneficial energy and 38% non-beneficial energy compared to 38% and 62% earlier [double check this]. Its central core (band) was 3 yards (2.74 metres) wide and 7 yards (6.4 metres) high compared to 2.25 yards (2 metres) and 9 yards (8.2 metres) earlier.

The bands were all now 1 yard apart compared to 2 yards earlier. The central band was still dowsing as purple with 40% beneficial energy and 60% non-beneficial energy.

Sare described a drawing in feeling.

At that time both the Deva of land and the energy line itself were very keen to have healing work done and gave permission enthusiastically. The healing turned out to be quite long and Sare observed that the line grew in power afterwards with the Bovis ring to 19,000ub.

As a result of taking the time to perform this healing she wasn't able to carry out any more of the Solar Noon readings but the fact that she was asked by the land Deva to perform the healing at that time is interesting in itself. She returned later in the day to complete further readings.

[This was especially interesting given that at the Summer Solstice session 2 weeks later, it was impressed upon us that Elemental Beings are very much involved in the transition periods. Mave Calvert and other Dowzers including Anne Pogson have found that the Solar Noon transition period is often an optimal time to send love and healing]

Observations around 6pm

Sara returned at 6pm which was 5 hours after the Solar Noon transition period had ended and around 3 hours before the Sunset Solar Transition period would begin.

The Dragon current was still flowing approximately north to south. This time it dowsed as 64% Yin & 36% Yang having not given a reading for either during the Solar Transition period. The Bovis had increased from 16,000ub to 18,000ub, the amount of Beneficial energy it was carrying had increased dramatically to 86% and the non-beneficial energy had dropped to 14%. Its central core (band) was still 3 yards (2.74 metres) wide and the height had increased from 7 to 10 yards (9 metres) high.

Sare observed that "the site felt very different"

SESSION 3 EARTH ENERGIES - RESULTS

Band Structure Analysis around 6pm

Band	Colour	Yin/Yang	Bovis
Band 1	Purple 3 yards wide	Yin	24K
Band 2	Ochre	Yang	
Band 3	Purple	Yin	
Band 4	Purple	Yang	
Band 5	no colour found	No Yin/Yang polarity found	
Band 6	Amber	“	
Band 7	Amber	“	

[The healing that Sare gave earlier, combined with the effects of the Solar Transition period likely cleared all the non-beneficial energy in the current and the 14% will probably be what it has picked up from the landscape and passing humans since that time and will be cleared during the Sunset transition period. The increase in height may also be due to the healing that the Deva of the land had asked Sare to perform]

Observations 2 weeks later

Sare made a repeat visit 2 weeks later at an unspecified date and time. She observed that the Dragon Line now had a Bovis 24,000ub and “the site felt like it had wings, the torus flops over on the crater site as if expanding to fracture in etheric field”.

SESSION 3 EARTH ENERGIES - RESULTS

Part 4 – Earth Energy Dragon Current Nodes

NEWSTEAD

After lunch in the café, we asked our Rods to take us to somewhere where we could complete the afternoon's research tasks. We half expected to return to the location where we had been that morning. However, the Rods turned in the opposite direction, and we were taken back to where we had done the Tree dowsing research on 11th April.

We found two Energy Lines Noding above a Blind Spring just north of the Oak tree that we had dowsed in Session One that had affectionately been named "Grandfather Oak."

We found that one Line was predominantly Male and one line predominantly Female and the two were a paring. This meant that both lines had roughly the same percentage on Yin and Yang within them. The Male contained around 70% Yang and 30% Yin energy and the Female around 70% Yin energy and 30% Yang energy.

When checking the percentage Yin/Yang in the energy lines different team members had dowsed slightly differently with one dowsing that there was 35% Yang in the Female line. These slight inconsistencies between dowsing results suggest that these energies are constantly in motion so the percentage of Yin/Yang energy in them is not fixed but oscillates over time, possibly also reacting to the consciousness of the individual Dowzers as we had found the trees did when we dowsed them in Session 1 in April.

When trying to dowse the Bovis of the Node different team members were getting differing Bovis readings ranging from 9,500 to 12,000 ub. After checking whether this was because the different Dowzers were not standing in exactly the same place, we ascertained that the readings were actually oscillating over time and were not static. This makes sense given that the Node is above a Blind Spring and our findings from the Water Energies dowsing session in May had already shown that the water that forms Blind Springs is in a constant pulsating motion.

Mave advised the team that some Dowzers, including Chris Tonge and Ali Denham ask to be shown the "undisturbed" energies.

Sian felt that the central core of the Energy Lines was yellow.

SESSION 3 EARTH ENERGIES - RESULTS

Kate dowsed the Male Energy Line. She was standing around 30 paces away from the Blind Spring where the Male Line Noded with its female counterpart. She found the line to have 4 bands either side of centre and was 47.5 paces wide. The core, or central, band was 6 paces wide. (One pace is roughly 28cm for both Kate and Maria.) One side of the Energy Line had bands of 4, 5.5, 4 and 8 paces wide working away from the centre. The other side had bands of 4, 8, 5 and 3 paces wide working away from the centre. When she moved to stand 5 paces away from the Node she found the Line had shrunk considerably and was less than 7 paces wide with the all the bands being between 1.25 and 05 paces wide. This is consistent with then energy line drawing in all its bands around the core when preparing to descend into a Blind Spring Node and then expanding them out again after leaving the Node.

While Kate was dowsing the Male Line, Maria marked out at what point the core of the Male Energy Line, which normally runs at 3 feet above ground level, starts dipping towards the ground. She found that the Core dips gradually and the two Lines enter the ground one metre from the centre of the Blind Spring at which point the core touches the ground. The individual Bands start to narrow as the core starts to dip towards the ground and consequently the Line as a whole becomes narrower. This is effectively a larger scale version of what had happened earlier with the snowflake obsidian and magnetite (see Part 1). We ascertained that as the bands narrow they effectively wrap themselves tightly around the core of the line a bit like a coiled wire rope. This was consistent with Kate dowsing that when she was 5 paces from the centre of the Blind Spring Node, the Line had narrowed from 47.5 paces to only 7 paces wide.

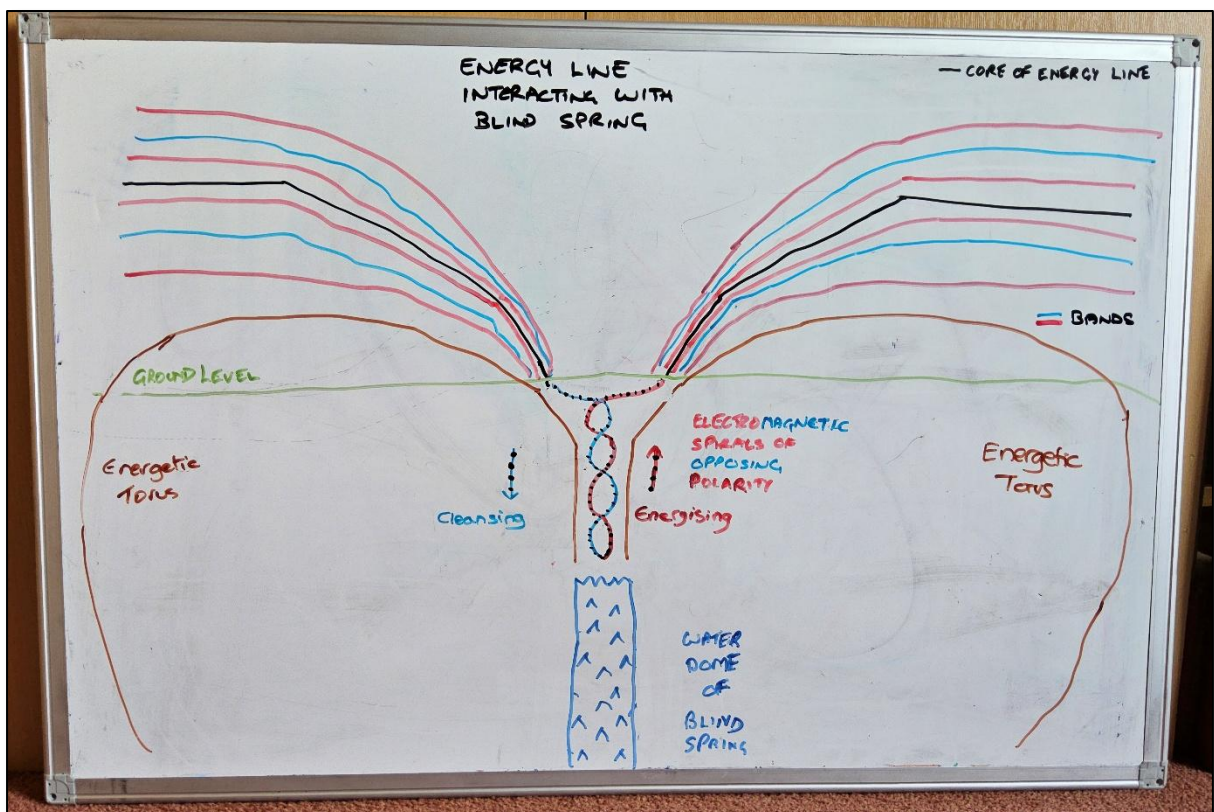

Sian felt that the Energy Lines going down into the Blind Spring Node didn't touch the actual liquid water, so the team dowsed around this to establish how these lines are cleansed and energised when they emerge at the other side of the Blind Spring Node.

SESSION 3 EARTH ENERGIES - RESULTS

Energy Lines entering and exiting Blind Spring Nodes

The whiteboard diagram below illustrates how the Energy Lines narrow when approaching a Node by retracting all the bands (blue and red) to the core (black). They then descend into the Blind Spring Node but do not go all the way down to the liquid water (dark blue chevrons). Instead, they are cleansed and re-energised by the caduceus-like electromagnetic current which is created by the moving water (and possibly the water vapour or bio-plasma released by the water dome). Maria described it as “Going through and against the spiral, not with it, like a washing machine.”

The core of the lines (black) starts to dip towards the ground and begin retracting in the bands (light blue and red) when they reach the edge of the funnel in the top of the energetic torus (brown) surrounding the Blind Spring Node.

SESSION 3 EARTH ENERGIES - RESULTS

Part 5 - Mid-Afternoon Transition Period

The Mid-afternoon transition period is a 12-minute period between 3pm and 3:15pm BST when Mave can no longer Dowse the electromagnetic components of Energy Lines and Vortices in their usual positions above ground with her hands. Her Dowsing suggests that they have gone underground

NEWSTEAD

The team established that the Energy Lines appear to prepare for the mid-afternoon transition period around 10 minutes before they disappear underground for the 12 minutes following 3pm.

At 2:50pm Sian could feel the lines starting to pitch in

At 2:52pm Sian reported that she started to feel nauseous and drained, which may have been related to the underground water of the Blind Spring below the Energy Line Node.

At 2:53pm Kate dowsed that the Male Energy Line was narrowing and had reduced to half of its normal width.

At 2:54pm Kate reported that the Energy Line was around a quarter of its former width other team members found the Bovis readings to be cycling and all the bands of the Energy Line to be on the same spot, having contracted in to the centre

At 2:58pm Kate reported that the line was dowsing as very, very narrow, but then

At 2:59pm Kate reported the Energy Line was starting to widen out a bit again. She reported a 4-minute contraction to nothing and then starting to widen out a bit again.

At 2:59pm other team members reported that the Bovis was cycling and all the Bands of the Energy Lines dowsed as being together on the same spot.

At 3:00pm Kate reported that the Energy Line was widening out again and had almost reached its original width.

At 3:00pm Maria found the Bovis to start cycling upwards gradually culminating at 20,000ub. She suggested that the 2-minute cycle that she had found during the Solar Noon Transition period may also be at play here.

At 3:02pm Maria found the Bovis reading had crashed i.e. no reading was obtainable. This continued for 30 seconds after which the readings started cycling upwards again

At 3:05pm the Lines had collapsed completely and were no longer detectable at the Blind Spring Node. However, Kate could Dowse them below ground at their normal width.

SESSION 3 EARTH ENERGIES - RESULTS

2-minute Bovis Oscillation Cycle

Maria found that there is a 2-minute cycle where the Bovis readings gradually cycle up to 20,000ub. Immediately following this they crash completely (i.e. no reading detectable) for 30 seconds, before the cycle starts again. This happens both during the Solar Noon and Mid-Afternoon transition periods when dowsing both Water and Earth Energies. It may be appropriate for us to check whether this cycle comes into play at other times, or whether it is only during transition periods.

Energy Lines contracting and Expanding at Different Heights

Kate was dowsing the Energy Line as a whole going through a cycle of expanding, contracting then expanding again. However, Mave found that she could no longer feel the core of the Energy Line above ground with her hands at one point, yet Kate could still Dows it with her Rods and noted that it was expanding again. We then decided to check whether the Line was above or below ground when Kate dowsed it.

When dowsing with Rods it is not always obvious at what height above or below ground the dowsing target is. We therefore asked several informational Dowsing (yes/no) questions, and it appeared that the contraction took place above ground and the expansion took place below ground.

It seems that in order to go underground, the Energy Line has to pull in all its bands tight around the core, then descend underground and then widen out again. This is similar to how the line also has to retract the bands into its core when descending into a Node (see Part 4) or certain types of crystals (see Part 1)

SESSION 3 EARTH ENERGIES - RESULTS

Dowsing by Kate Richatdson on home Energy Line, Shepshed 18/6/26

Kate decided to try and learn more about the behaviour of Energy Lines before the Mid-Afternoon transition period by monitoring the Energy Line in her home.

18/6/26

14:44 Energy Line started to contract

14:45 Outer edge had shrunk to where the core had dowsed previously just under half of its total width which is 2.5ish metres)

14:46 Almost gone

14:47 Gone

14:52 Line starting to come back

14:53 Line fully back

Has the Energy Line gone Underground? No

Has the Energy Line gone upwards? Yes

To above the house? No

To somewhere between the ground and the house? No

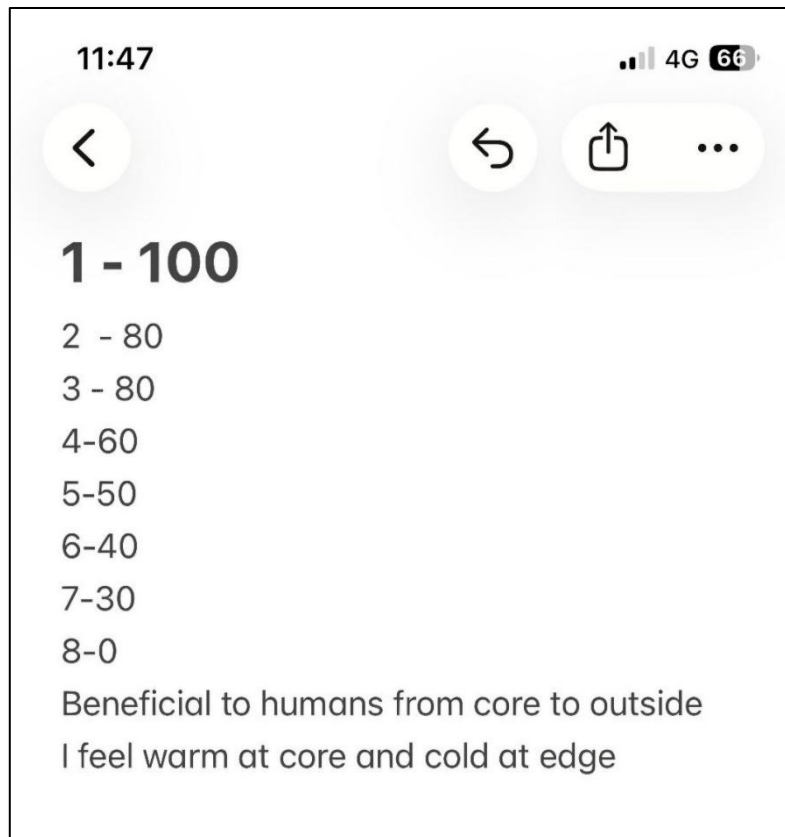

To another dimension? Not Sure / rephrase the question

SESSION 3 EARTH ENERGIES - RESULTS

Kate Richardson on site at Newstead 13/6/26:

Dowsing Energy line through Yew trees, south of the Abbey

Line dowsed as core with 4 bands on either side.

Color frequency	Core Ultraviolet	Band 1 Ultraviolet	Band 2 Blue	Band 3 InfraWhite	Band 4 Orange
Rods leading	3,000	10,000	6,000	40,000	8,000
Direction of flow	South	North	South	North	South
% Yin/yang	85% Yin 15% Yang	85% Yin 15% Yang	30% Yin 70% Yang	50% Yin 50% Yang	60% Yin 40% Yang
% Beneficial energy	80%	70%	80%	60%	60%
% Detrimental energy	20%	30%	20%	40%	40%

After Stan found the sink/node nearest to where we'd started dowsing, Debi found 3 more. Her rods took her in a clockwise circle before going left (west) to the node. This changed after solar noon to being taken anticlockwise!

	Node 1	Node 2	Node 3	N
% Detrimental Energy Being taken to Node Before Solar Noon	80%	70%	65%	3° 2° 0° Node
After Solar noon	? 15%	5%	0%	S Male energy

At start point, overall Detrimental energy on line, I dowsed 50% after SN 30%

SESSION 3 EARTH ENERGIES - RESULTS

In the afternoon Transition Period

We dowsed near the oak where we'd started on Session 1. We found two crossing energy lines. I dowsed the male line. Bovis 9,000.

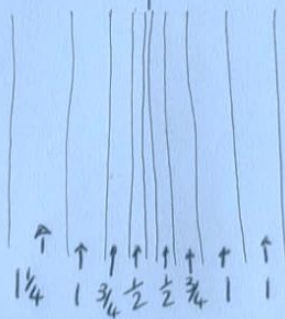

The above was measured 30 paces from the node.

At 5 paces from the node the above line seemed to shrink to

core 2"

?? time not noted....

SESSION 3 EARTH ENERGIES - RESULTS

Sare Bassett in Reigate Priory Park 14/6/26

NEWSTEAD DOWSING RESEARCH PROJECT 2026 – SESSION 3 14/6/26 Sare Bassett

Single Current Nodes Reigate Priory Park, Surrey - 51.230815133613234 -0.21063372205215147 **Solar noon time (local) 12:59,**

Location Description: flattened barrow on top of Seale Hill, WW2 bomb crater alongside, Earth Energy Dragon Currents – flow approx. running North to South

Part 1 – Pre Noon baseline Readings

Vortex - Capped blind spring with Torus. Blind spring present deep underground water rising and possibly flowing into tunnel/cave.

Dragon Current Yang 90% Yin 10% 15,000 on Bovis - Beneficial 38% Non Beneficial 62%

Band Structure Analysis Base line wave appeared East to West - Initial dragon line is 3 yards wide - bands approx. 2 yard apart

Bands width	Colour	Yin/Yang	Bovis %	non beneficial / beneficial
Band 1	Purple 3 yards wide	Yang	15K	Central Core – width a ground 2 1/4 yards, height 9 yards
Band 2	Deep Orange	Yin	Didn't check rest of bands	“ Yin
Band 3	Red	Yang		
Band 4	Purple	Yin		
Band 5	 Sky Blue	Yang		
Band 6	 Sky Blue	yin		
Band 7	Purple	yang		

Vertical Bands - All curves concave both sides towards central dragon line, appeared to be symmetrical and part of large torus structure.

bands resemble concentric tubes around the core, hollow tubes filled with vibrational matter

Human Interaction – Spirit of Place, female gatekeeper, very happy to have contact/ Something non beneficial had happened North in a South London park on the line.

Node Location – node on site of original monks burial ground in central area of The Priory Park (busy area with fountain so not dowsed, have RV'd)

Dragon line travels through The Priory building. Also something else going on – there are known caves, graves and a stream that is piped. Have been advised not to RV or dowse at this time.

Part 2 – Solar Noon

Dragon Current Yang 0% Yin 0% 16,000 on Bovis Beneficial 64% Non Beneficial 38% Flow direction approx. North to South

Central Core – width a ground 3 yards, height 7 yards – Solar noon happening at time of dowse. Drawing in feeling. Deva of land very keen to have healing work done, gave permission ethusatically.

Band Structure Analysis Base line Initial dragon line is 3 yards wide - bands approx. 1 yard apart

Bands width	Colour	Yin/Yang	Bovis %	non beneficial / beneficial
Band 1	Purple 3 yards wide		16K	Beneficial 40% Non Beneficial 60%
Didn't have time to check the rest of bands				

SESSION 3 EARTH ENERGIES - RESULTS

Human Interaction - Bovis

Harmonious **Quartz cluster on line – 18,000**

Inharmonious **Lady Gaga – Abracadabra** (reverses sacred words in song) – **4,000**

Harmonious **Singling bowl – 18,000**

Harmonious – full earth healing to line – 19,000

Observations – line strongly requested a long energy healing (given) and it grew in power after.

After Transition – 6pm

Dragon Current Yin 64 Yang 36% 18,000 on Bovis Energy - Beneficial 86% Non Beneficial 14% Flow direction approx. North to South

Central Core – width a ground 3 yards, height 10 yards

Band Structure Analysis Base line Purple Initial dragon line is 3 yards wide - bands approx. 1 yard apart

Bands width	Colour	Yin/Yang	Bovis %
Band 1	Purple 3 yards wide	Yin	24K
Band 2	Ochre	Yang	
Band 3	Purple	Yin	

Band 4	Purple	Yang
Band 5	no colour found	No Yin/Yang polarity found
Band 6	Amber	"
Band 7	Amber	"

Human interaction – site felt very different.

Repeat visit 2 weeks later – Bovis 24,000 site felt like it had wings, the torus flops over on the crater site as if expanding to fracture in etheric field.

SESSION 3 EARTH ENERGIES - RESULTS

Remote Dowsing by Peter Drummond of the Dowsing Research Group

9/5/26 PETER DRUMMOND

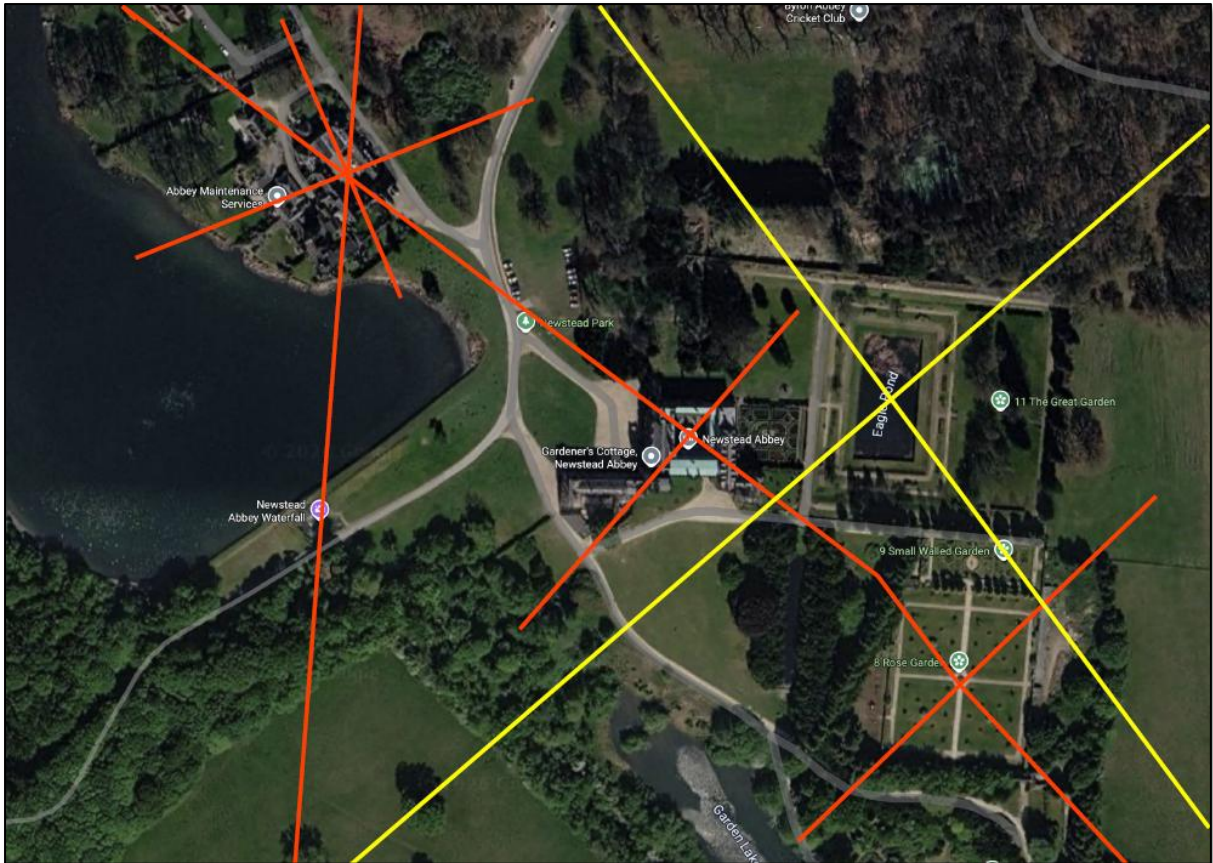

I am someone who mostly used physical and to some extent visual dowsing. while our specific areas of interest are different, thought it reasonable to submit a couple of swiftly drawn up images based on Google maps showing the things which cause a physical reaction when drawing a computer mouse over these areas. Tend to describe them as factors which may have influenced the chosen location for particular structural features, or are created by those layout

Busiest area for me is the Abbey Maintenance Services, this primary node would have been utilised in pre-Christian times. Newstead buildings attachment gives a simplified version of the at least 2 overlying patterns to be found there, consisting of nearly 90 converging lines mostly with interlaced patterns and 24 concentric circles centred on that particular intersection.

My technique and results are generally different to those found by others, so feel free to disregard.

SESSION 3 EARTH ENERGIES - RESULTS

14/5/26 RESPONSE FROM ANNE POGSON WHO IS A DOWSER AND A MEDIUM

“Your Orkney friend is absolutely correct

I too get pre-Christian dated approx. 400 BC (Bronze Age) The area where multiple red lines cross beside the lake is the most important. I am told it is where people gathered, a worshiping site, somewhere they liked to gather, people of different 'tribes' met amicably there ... this is a place where people still gather at times

The whole area is a place of great atmosphere spirits still gather there you can hear them in the evenings

Did the ancient people of Newstead have a crannog in the lake?

No but they had something similar in the water a place where they would meet and talk a very important place”

Anne visited in person as part of Session 5 on 12th July and was able to confirm once more the importance of this area. She felt that there has been a lake in this area since ancient times and a sort of crannog-like structure once existed in the lake.

SESSION 3 EARTH ENERGIES - RESULTS

12/5/26 PETER DRUMMOND

Most grateful for your encouragement. Looked at the area you circled but did not get a reaction there, however 4 trees did register they are circled in red. Two offered intersecting lines, of which a couple appear to be emanating from waterfall area. See attached. Yellow line still marks the longer effect, red ones shorter range. Going back to the Abbey Maintenance Services area the configuration which I detect is often associated with a burial or placement of human remains, more optimistically hiding of a treasure. No signs of early human habitation nearby ideally need a set of sharper drone images from directly above to map in greater detail.
