

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

This document details the results of Session 7 of the Newstead Dowsing Research Project that took place in September 2026. The session focussed on the energies of the New and Full Moons including the Lunar Transition periods. The main highlights are summarised on pages 4 and 5. This is followed by a detailed analysis of the findings. The Appendices contain the data sheets submitted by individual participants and data from Mave's observations of tree behaviour at Lunar Transition periods.

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

OVERVIEW OF PROJECT

Aim of the Project

The aim of this dowsing research project is to explore different aspects of tree, water, and earth energies and to investigate how the different aspects are interconnected, as well as how they are affected by sound-based stimuli, crystals, the Solar Noon transition period (the 20-minute period leading up to Solar Noon), the mid-afternoon transition period (3pm to 3:15pm), the periods surrounding New & Full Moon and the periods surrounding the Equinoxes and Solstices.

A team of Dowsters led by Mave Calvert is working on the ground in the parkland surrounding Newstead Abbey in Nottinghamshire. Other individuals and groups are carrying out parallel research in other locations.

One of the aims of this research project is to investigate Mave Calvert's ideas about these energies and try to prove, disprove and/or revise some of these ideas and hopefully find other interesting things as well.

The project documentation can be found on Mave's dowsingsherwood.com website:

[Research Project \(List\) | The Sherwood Dowser](#)

As well as the Project Summary and details of each individual themed session, there is a document containing the pendulum dowsing charts, a document containing information about the location, geology and a brief history of the Newstead area, and documents giving opportunities for dowsters to do some remote/map dowsing and monitor some energies in their own home and garden.

Session 7 – New & Full Moon Energies & Lunar Transition Periods

The penultimate project session took place in September 2026 and focussed on the energies of the New and Full Moon and the Lunar Transition periods. The participating Dowsters were:

NEWSTEAD TEAM 12/9/2026

Mave Calvert, Chris Parker, Kate Richardson, Sian Wilson

DOWSTERS WORKING ELSEWHERE

Ali Denham at Old Sarum, Wiltshire, 11th September

Richard Sears at Berry Castle, Huntshaw, Devon, 11th September

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

SUMMARY

✦ Billy Gawn found that energetic cylinders form around standing stones during the New and Full Moon periods. Mave Calvert extended this research and found that energetic cylinders also form around Capped Vortices, Blind Springs and the trunks of many trees for around 48 hours over the periods of New and Full Moon. She also found that these cylinders form and dissolve during solar transition periods.

✦ According to Billy Gawn, these cylinders become narrower towards the exact times of New and Full Moon and then widen out again before dissolving. The Dowzers working remotely on the day of the New Moon and at Newstead and the day after the New Moon were able to locate the New Moon cylinders around trees and confirm that they do seem to be very narrow close to the New Moon then become wider.

✦ The dowzers working at Newstead and elsewhere found that New Moon cylinders around trees are often elliptical, and some found that they seem to be constantly expanding and contracting both up and down as well as in and out

✦ At Newstead it was found that the New Moon cylinder around an Oak tree had four bands within it which was more than expected and may be linked to either underground water energies, the toroidal field created by the tree, or a combination of both

✦ The Newstead team found that the New Moon cylinders dissolved during the Solar Noon transition period on 12th September 2026 which was the day following New Moon. During this Solar Noon transition period the aura of an Oak tree contracted simultaneously with the New Moon cylinders around the tree expanding prior to dissolving

✦ At Newstead the cylinder around a Capped Vortex dissolved at 7 minutes before Solar Noon. The cylinders around the trees dissolved a few minutes after the ones around the Capped Vortex.

✦ It was found that while the four layers of the New Moon cylinders around the Oak tree could no longer be detected after Solar Noon by hand dowsing at around 1.3m above ground, they could still be picked up by a rod because their energy fields still existed up to 20cm above the ground which could indicate they dissolve into the ground. It also shows that Dowzers need to be aware of where the energy that they are dowsing is in 3-dimensional space.

✦ The cylinders around the smaller Blind Springs were found to be barely noticeable and to have very little effect on any Dragon Currents and/or energy lines that descend into these Blind Springs. However, the cylinders around the larger more powerful Blind Springs are more easily located and hold the Dragon currents back some distance compared to normal.

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

✧ Lunar Transition periods take place for 20 to 30 minutes preceding the exact times of New Moon, Half Moon (First Quarter and Last Quarter) and Full Moon, but only in locations where these Lunar events take place during daylight hours

✧ Some trees, including those which Gordon Field calls “Tree Devas” have a spiralling energy field that expands during the weeks leading up to the Half Moons and contracts during the weeks leading up to New and Full Moons. Through observations in her garden, Mave found that the energy fields of these Tree Devas expand and contract as Gordon Field suggests with the widest extent of a Poplar Tree Deva’s spiralling field being 16 metres at Half Moon and contracting to very close to the trunk at the New and Full Moons

✧ Through observations at Newstead and in her garden, Mave was able to confirm that these “Tree Devas” do indeed release energy into the Biosphere as Gordon Field suggests, and that they do so during the of the Lunar Transition periods

✧ The Newstead team experimented by taking naps and meditating during the mid-afternoon transition to see whether this had a positive effect on their metabolisms. The participants who laid down quiet under a tree reported increases in their wellbeing whereas the participant who carried on dowsing reported feeling tired and drained.

✧ Monitoring Bovis and Colour frequencies by holding a dowsing tool steady over a dowsing chart during the transition periods shows just how quickly and by how much these values can fluctuate, especially with regard to underground water. Dowsing this way also showed the size and direction of flow of the energetic toroidal features that surround Blind Springs. Examples of this can be found in these videos from the project created by Sian Wilson:

<https://www.youtube.com/watch?v=47uY3OiPbc4&list=PLdqJDAiemhQg&pp=sAgC>

https://www.youtube.com/watch?v=gpd44lu3ZJ4&list=PLXpi_sk86e4c&pp=0gcJCf8COCosWNinsAgC

✧ Gordon Field says that the deep underground water associated with Beacon Trees and Beacon Springs is tidal. This tidal effect may be what causes all the fluctuations of underground water noted during this project that then affects the interconnected energies of trees, earth energies, especially at times when the Sun and Moon are at specific positions in relation to one another and the earth.

✧ It is beyond the remit of this project to say whether the lunar phases and transition periods may affect water divining, and professional water diviners should carry out experiments of their own if they feel this could be the case. We only dowsed Blind Springs on open ground to see how they are connected with trees and earth energies, and were not specifically looking for locations suitable to sink wells and bore holes

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

DETAILED FINDINGS

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

Part 1 – Trees at the New and Full Moon

The aim of this part was to dowse a tree to see whether its trunk was surrounded by an energetic cylinder then use informational dowsing to dowse the height and depth of this cylinder. The readings were then to be repeated in Part 5 once the energetic cylinders had dissolved during the Solar Noon transition period.

Is there a vertical energetic cylinder close to the tree's trunk?

How high does the cylinder extend above ground?

How deep does the cylinder extend below ground?

Experiment: give the tree a blessing, sing to it and/or place a crystal such as a quartz or amethyst next to its trunk. Does the cylinder widen out and if so by how much?

Can you detect any other energy fields associated with the tree? If so, what is the shape of that energy field (radius, height and depth), does it contain any bands and does each band dowse as positive/yang or negative/yin?

Does the tree's aura extend out around its canopy?

NEWSTEAD

Our dowsing directed us towards Grandfather Oak who seemed to be in a jolly mood and keen to work with us. We started dowsing around 11:15am. The weather was warm and overcast with intermittent drizzle in the morning, brightening up in the afternoon.

Kate found that there was indeed a New Moon vertical cylinder around Grandfather Oak. She found it to be elliptical in shape. This was a question we had added in after Ali Denham dowsing in Wiltshire on the previous day reported that the New Moon cylinders around two trees that she dowsed were elliptical in shape. Kate found that the tree's New Moon cylinder extended 4.5 paces (2.25 metres) to the east, 6 Paces (3 metres) to the north. 14 paces (7 metres) to the west and 12 paces (6 metres) to the south, so it was much wider to the SW.

Kate was able to trace the outline of the tree's aura around its canopy with her dowsing rod and found it to extend to around 2m around the entire canopy which is the same as Mave finds using her deviceless dowsing techniques.

The "Aura" of the tree which was dowsed by Chris and was distinct from the New Moon cylinder, extended out to 12-13 paces (approx. 5 metres).

Sian dowsed a "New Moon cylinder" around Grandfather Oak and marked its outline which was roughly the size of the maximum width of the tree's canopy and the aura that Chris had dowsed.

Mave paced out the outer edge of the cylinder that Sian had marked out and got 8 paces (3.2 metres) to the SE, 10 paces (4 metres) to the SSW, 9 paces (3.6 metres) to the NNW,

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

and 8 paces (3.2 metres) to the East so again the cylinder was slightly elliptical, but not to a large extent.

Sian dowsed 4 bands between the outer edge of the cylinder and the tree trunk. Walking from the outer edge towards the tree, she took a measurement of the height and depth each time her rods crossed to say she was on a different band. She used dowsing rods to count these measurements in feet. The edge of the outermost band was 49 feet (15m) high and 15 feet (4.5m) deep. The edge of the next band was 30 feet (9m) high and 14 feet (4.25m) deep, the edge of the next band was 34 feet (10.35m) high and 23 feet (7m) deep and the edge of the innermost band was 21 feet (6.4m) high and 1 foot (0.3m) deep. As she worked inwards, Sian started to feel an impatience with the pendulum as if the energy was wanting to move and reluctantly trying to hold itself still until she had completed the readings.

The different shapes of the cylinders dowsed by Kate and Sian suggested possibly two different things were overlapping and underlines the project mantra that we must go with what we get even if it is different to what we were expecting and what others get. Sian has an affinity with water while Kate has an affinity with trees and Mave has an affinity with earth energy. It is therefore possible that the New Moon cylinders that Sian picked up were related to water and we were being shown something a bit different, whereas Kate's dowsing had picked up the tree's New Moon cylinder that we were originally intending to look for.

Billy Gawn found that the New and Full Moon cylinders around standing stones are narrowest at the exact times of New and Full Moon and widen out quite a lot before dissolving. The large widths found at Newstead less than 2 hours before the cylinders dissolved are therefore consistent with Billy's findings. By contrast, Ali Denham dowsing in Wiltshire on the previous day, only 4 hours after the time of New Moon, found two relatively narrow tree cylinders which did not seem to extend below ground.

Since Kate and Sian were getting different readings, we asked whether the tree aura was oscillating all the time and got a strong Yes. Again, not surprising if the cylinders were becoming unstable prior to dissolving.

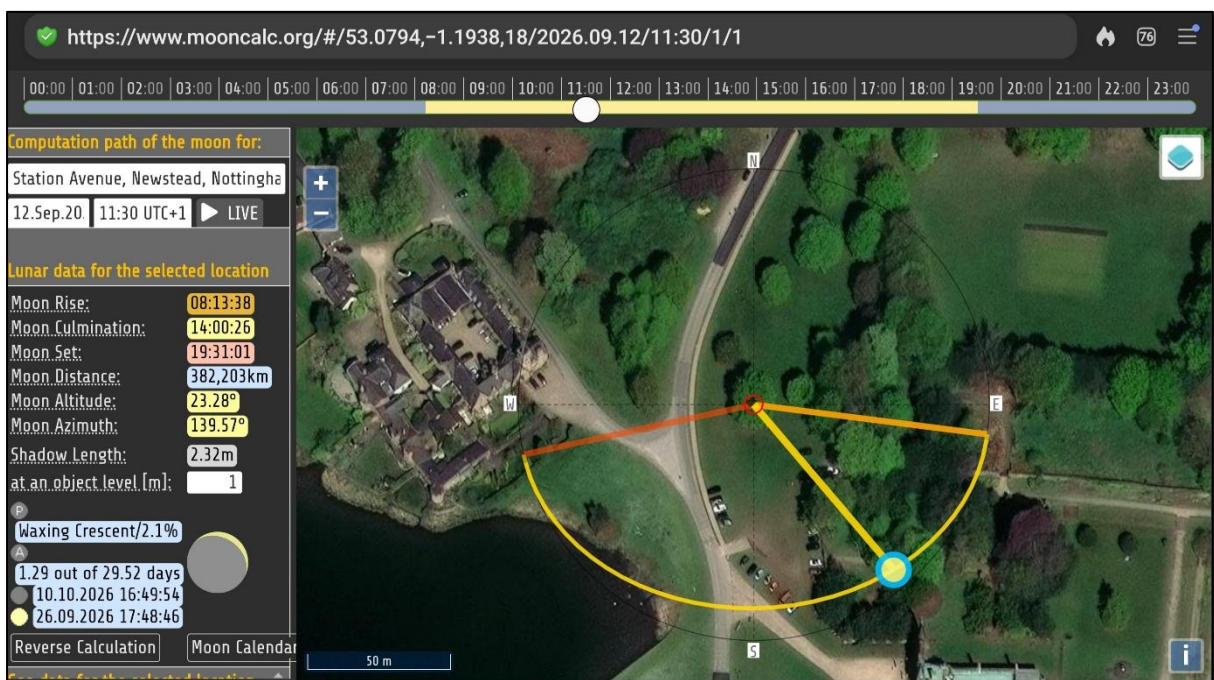

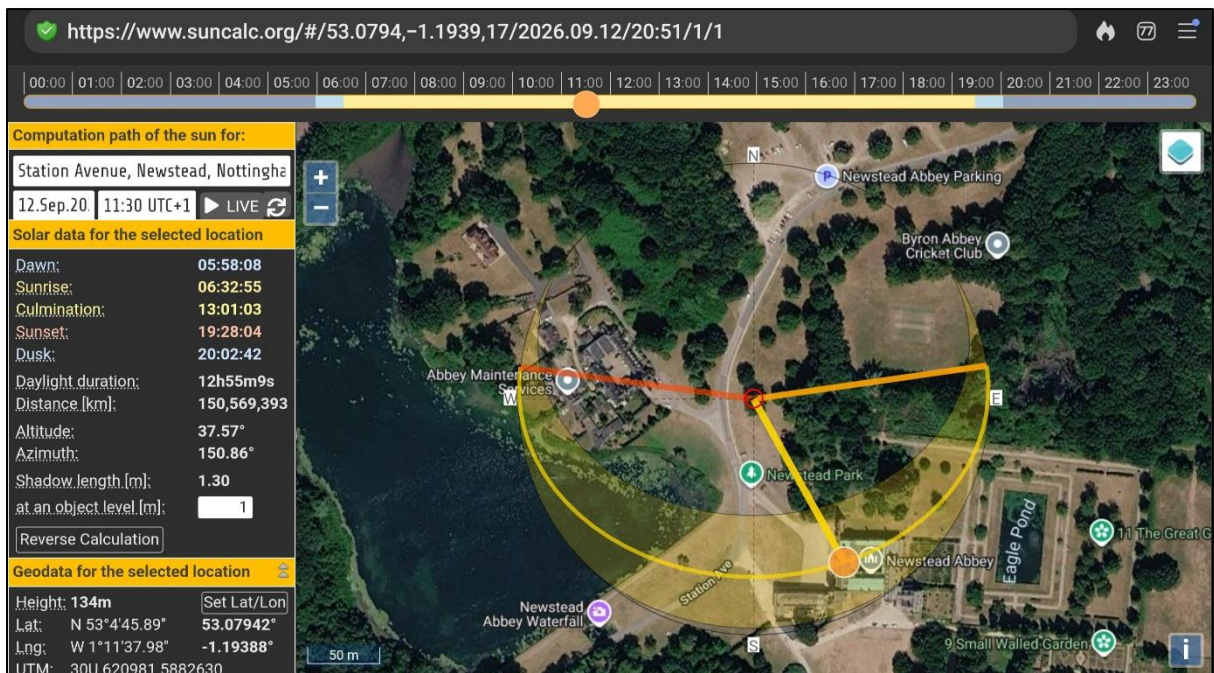

We have found in other sessions that the energies that we have been dowsing are in perpetual motion, constantly forming and re-forming themselves and responding to all the differing energies in their environment including the presence of the dowsers. Whilst giving us a very interesting look into the nature of reality, it means that "scientific" baseline readings are difficult, if not impossible, to obtain as there is actually no such thing as a baseline. It also explains why the team's dowsing results differ when measuring the same energies but at slightly different times and standing in slightly different positions.

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

We decided not to carry out the singing and crystal experiments due to time constraints and concerns about the drizzle worsening meaning we would not be able to keep our notes dry. We also felt it would overcomplicate the day's work. However, Richard Sears had done an experiment in Devon the previous day which is mentioned in Part 5,

Refer to the images on page 10 to see an aerial view of where we were dowsing and where the Sun and Moon were at that time.

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

The above images from the suncalc and mooncalc websites centre on Grandfather Oak at Newstead where we carried out the morning's dowsing looking for the New Moon cylinders.

The top image shows the position of the Sun at 11:30am on 12th September where we were dowsing at Newstead and the bottom image shows the position of the Moon at the same time. Because it was only around 30 hours after the exact time of New Moon when the Sun and Moon are in the exact same place in the sky, the two astral bodies were still relatively close together.

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

DOWSERS IN OTHER LOCATIONS

Ali Denham at Old Sarum, Wiltshire

Dowsing around 8:45am on 11th September, Ali found that a Field Maple and a larger Oak both had elliptical cylinders which were Larger on the NW and SE sides. The SE was where the Sun and Moon were together in the sky at the time.

The cylinder around the Field Maple was approx. 30cm lengthways from the trunk and 15cm widthways.

The cylinder around the larger Oak was approx. 125cm lengthways from the trunk and 75cm widthways.

Both cylinders were canopy height and just 1cm below ground.

Billy Gawn notes that the New and Moon cylinders narrow down a lot around the exact time of New and Full Moon. New Moon was around 4 hours prior to Ali's dowsing so her smaller measurements compared to the Newstead team's finding the next day support this.

Richard Sears at Berry Castle, Huntshaw Woods, Devon

Dowsing in the late morning of 11th September, around 7-8 hours after New Moon, Richard found a 260-year-old Oak tree with a cylinder around it. The cylinder was approximately 7 metres in diameter, went 15 metres down and was between 3 and 4 tree heights high.

Richard found this Oak tree was interconnected with other Oaks in the area by energy lines and they all had 5 concentric rings of energy around them in addition to the cylinder.

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

Part 2 – Capped Vortices at New and Full Moon

The aim of this part was to locate a Capped Vortex and dowse whether it was surrounded by an energetic cylinder and how that affected the structure of the Vortex. The readings were then to be repeated in Part 5 once the energetic cylinders had dissolved during the Solar Noon transition period.

Is the Capped Vortex surrounded by a vertical circular wall of energy similar to those surrounding the tree trunks in Part 1? What is the diameter of this cylinder?

Do the two counter-rotating spirals in the Vortex expand outwards and contract inwards or do they just go up and down?

Can you detect any other energy field surrounding the Capped Vortex?

NEWSTEAD

We located a Capped Vortex not far from Grandfather Oak.

It was noted that the cylinder around the Capped Vortex was much narrower than those around the trees, only around a metre or so in diameter.

Sian dowsed the cylinder around the Capped Vortex was 14 feet (4.2m) above ground and 13 feet (4m) below ground.

Kate dowsed the cylinder around the Capped Vortex was 17 feet (5m) above ground and 9 feet (2.75m) below ground.

Again, we got a strong Yes when asking if the energies of the New Moon cylinder were oscillating up and down. We also got a yes to the cylinder sizes being affected by rain, which may be due to the amount of direct sunlight being lower when it is raining. Billy Gawn noted that the cylinder sizes increased in size towards the winter months.

Experiment. *If your Dowsing suggests that it is safe to do so, stand in the Capped Vortex, close your eyes and relax. Try to float your arms upwards and outwards and see whether this is easy or whether it feels like there is a wall of energy that is constraining you and making this difficult.*

It was noted that when we placed our hands over the top of the Capped Vortex at 2-3 feet (0.6 to 0.9m) above ground level it felt very hot and dense.

Mave demonstrated how to feel the spirals by placing a hand over the vortex and just allowing it to float on the energy as if you are watching it from a distance and not consciously moving it. The other team members tried the same experiment with varying degrees of success which improved throughout the day.

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

Mave demonstrated how when she stood in the Capped Vortex with the cylinder around it she was unable to float her arms up very far without using her muscles, feeling that they had hit an energetic wall, a bit like when dowsing the layers of a human or tree aura. The others tried the same experiment (see photo) again with varying degrees of success.

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

Part 3 – Blind Springs at New & Full Moon

The aim of this part was to locate a Blind Spring that two energy lines descended into, dowsed whether an energetic cylinder had formed around it and at what distance from the centre the energy lines descended into the ground and re-emerged. The readings were then to be repeated in Part 5 once the energetic cylinders had dissolved during the Solar Noon transition period.

Can you detect a vertical wall of energy around the Blind Spring at any point? Is it a single wall or a double wall with space in between?

Measure how far away from the centre of the Blind Spring each Energy Line descends into the ground and re-emerges at the opposite side.

Do the Energy Lines descend into / emerge from the ground inside or outside the cylinder?

NEWSTEAD

We checked out several Blind Springs near to Grandfather Oak, some of which had energy lines descending into them, but we were unable to find a cylinder around them that held the energy lines back from where they would normally descend into it. There were multiple Blind Springs in the area but none were very deep or powerful, so it may be that the New Moon cylinders only form around the more powerful ones or perhaps these were less effective shortly before the cylinders were getting ready to dissolve and therefore becoming unstable.

Sian was guided to a Blind Spring across the road near the pentagram tree from the previous session. She dowsed its depth as between 14 and 23 feet (4.2 and 7m). She returned here to monitor both the Solar Noon and mid-afternoon transition periods. Mave could detect a small cylinder around it which was about 4 paces from the centre where an energy line descended into it.

The more powerful Blind Springs at Newstead were in other locations and there was not time to check them out prior to the Solar Noon dowsing.

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

DOWSERS IN OTHER LOCATIONS

Richard Sears at Berry Castle, Huntshaw Woods, Devon

Dowsing in the late morning of 11th September, Richard found a Shaman's circle above a powerful Blind Spring that Devon Dowzers had previously visited in 2016 which gave him a head start on dowsing the location.

Standing over the centre of the Blind Spring, Richard could feel a strong tingling going vertically through his body and he commented that "I knew I was on the intersection point".

Richard asked how wide the central vortex of the Shaman's circle was and got 6 to 8 metres. It dowsed as female/yin 60% and male/yang 40% with one inside the other. The cylinder was 5 metres above the ground and 5 metres below.

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

Part 4 - Solar Noon Transition Period at New & Full Moon

The aim of this part was for each Dowser to choose a Tree, Capped Vortex or Blind Spring that they dowsed in parts 1, 2 or 3 and monitor it. Readings of the width of the energetic cylinder surrounding the chosen feature were to be taken once a minute to see at what point during the 20-minute Solar transition period the cylinder around the feature being monitored dissolved and could no longer be dowsed.

NEWSTEAD

Solar Noon at Newstead was at 13:01pm and readings were taken from 12:41 to 13:01.

During the Solar Noon transition period the team members all monitored different things. The data sheets can found in the Appendix.

Mave - New Moon Cylinders at Grandfather Oak and nearby Capped Vortex

Mave monitored the size of the 4 bands of the cylinder that Sian had dowsed around Grandfather Oak in Part 1 and a nearby Capped Vortex.

She monitored the bands of the New Moon cylinder in the direction between Grandfather Oak and the nearby Hornbeam tree that was involved in Session 1 of the project which was in the direction ENE. She measured this in paces then translated it into metres, one of her paces being approx. 0.4 metres. She was holding her hand vertically, palm outwards approx. 1.3 metres above ground level at more or less the same height as a tool dowser would hold a dowsing rod.

For the first 9 minutes from 12:41 to 12:49 the four bands of the cylinder remained a consistent size, each measuring 3 paces (1.2 metres) making a total width of 4.8 metres.

At 12:50 the two inner bands had expanded to 5 paces and the two outer bands to 4 paces making a total width of 7.2 metres which lasted for 2 minutes.

At 12:52 the cylinder bands started to contract again reaching 5.6 metres in total.

By 12:54 Mave could only detect one of the four bands, the second one out from the tree, which was 6 paces (2.4 metres) from the trunk.

At 12:57 Mave could no longer detect any of the bands.

Mave also monitored the cylinder around the nearby Capped Vortex and reported that it had dissolved at 12:53pm. Just before this happened she reported a tingling feeling. At 12:50 She had felt the cylinder expand a bit which was the same time as the cylinder around Grandfather Oak started to expand.

After 12:54pm Mave reported that she could no longer see any cylinders around any of the tree trunks in the area using her dowsing by eye technique.

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

From 12:58 to 13:00 Mave reported that she could no longer detect the Capped Vortex at all. This is normal for this point in the Solar Noon transition period when they appear to go underground for 2-3 minutes.

Chris – Grandfather Oak's Aura

Chris monitored the overall width of the aura around Grandfather Oak that he had dowsed in Part 1, marking it with tent pegs and then measuring it with a long tape measure. The measurements were taken from the trunk to the east side of the aura. At 12:44 the measurement was 6.1 metres. It began to gradually decrease reaching its narrowest 4.7 metres at 12:52pm [just before Mave reported that the New Moon cylinders dissolved] and then gradually increasing back to 6.1 metres just before Solar Noon.

It seems that as the New Moon cylinder around Grandfather Oak expanded, the aura of the tree contracted.

Kate - line between the Beacon Tree and Grandfather Oak

Kate monitored the line between the Beacon Tree in the car park that she monitored in Session 6. Last time she had monitored the width and flow direction of the line using a pendulum, this time she monitored its Bovis and colour frequency using a rod, having neglected to bring her pendulum. The readings were taken once a minute.

Kate monitored from 12:46 (15 minutes before Solar Noon) to 13:05 (4 minutes after Solar Noon).

She noted that at 12:52 (9 minutes before Solar Noon) she was not getting a Bovis reading at all, consistent with what other team members would call a “crash”. This was the same time as Chris found the aura of Grandfather Oak to be at its narrowest and the same time as Mave reported a tingling feeling prior to the New Moon cylinder around the Capped Vortex dissolving.

At 12:46 Kate had found the Bovis of the tree line to be 18,000ub. It then went out of range (above 100,000) before falling to 4,000ub at 12:48. It then oscillated up and down between 2,000ub and 7,000ub for the next three minutes before not giving a reading at all at 12:50, as mentioned above.

At 12:53 (8 minutes before Solar Noon) the Bovis reading was 5,000ub and again oscillated for the next few minutes between 5,000ub and 11,000ub gradually climbing back up to reach 11,000ub by Solar Noon.

Kate started monitoring the colour frequency of the line at 12:49 (12 minutes before Solar Noon) and found it to be positive green at the time when the lowest Bovis reading of 2,000ub was also given. Between 12:54 and 12:55 the colour of Spiritual Gold was prevalent which indicated that the tree was releasing spiritual gold energy from its divine centre. After this, apart from a reading of Blue at 12:57 [just before Mave reported the

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

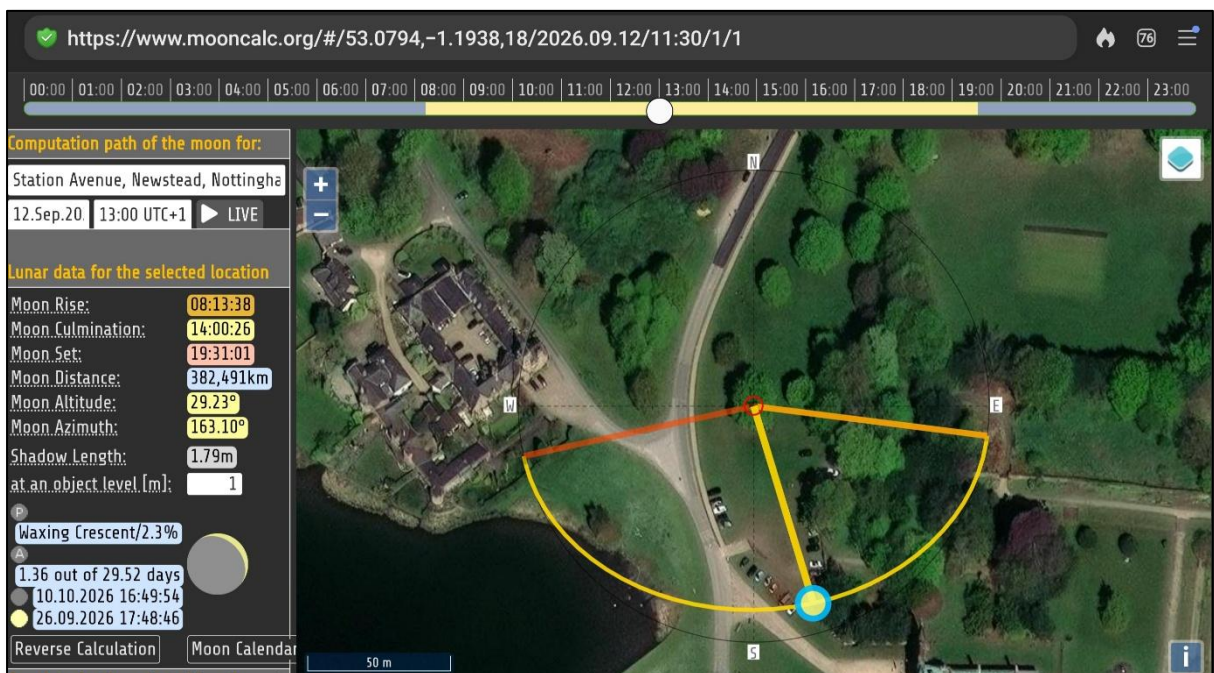

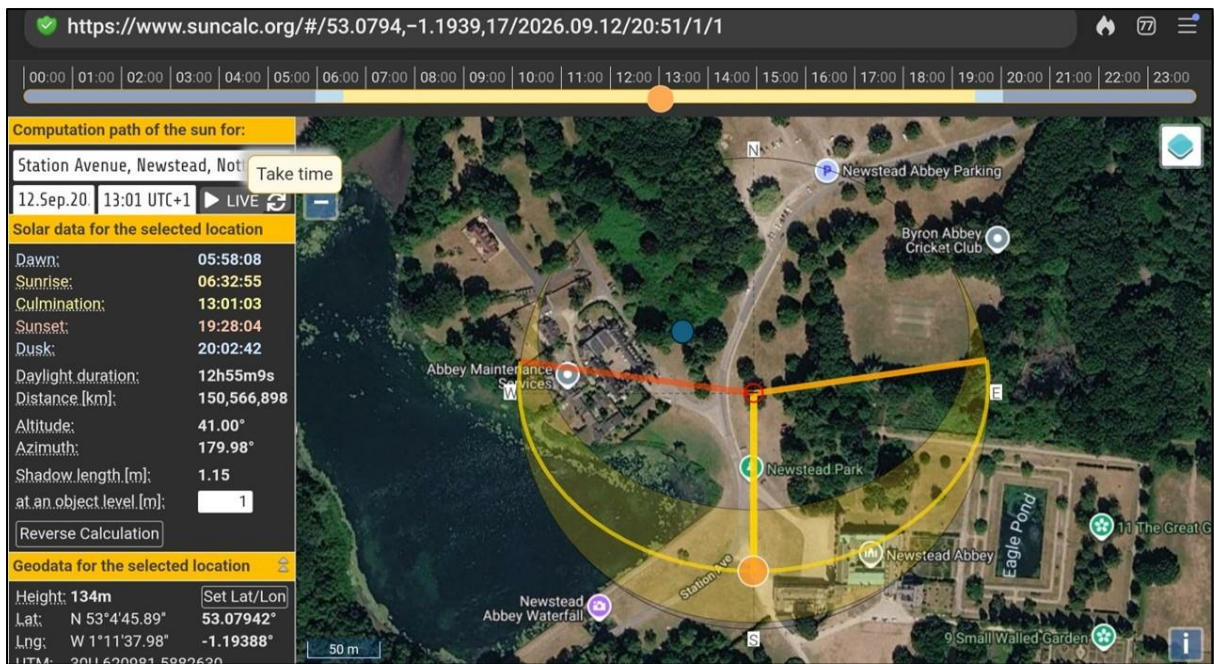

Capped Vortices no longer being detectable above ground], the colour frequency readings were all very high and no longer consistent with the Bovis readings. Mave suspects that the trees gradually ramp up the colour frequencies so that the Beacon Tree can broadcast Spiritual Gold energy into the landscape at the end of the Solar Transition periods. These colour readings of the line between Grandfather Oak and the Beacon Tree, taken while Kate was standing under the Beacon Tree, appear to substantiate this theory.

In session 6 Kate had found that this tree line predominantly flowed from Grandfather Oak towards the Beacon Tree until 7 minutes before Solar Noon when it changed direction to flow predominantly from Grandfather Oak towards the Beacon Tree and increased dramatically in width as if it was highly energised. 7 minutes before Solar Noon was 12:54 today and it was at that exact time that Kate measured the Bovis increasing significantly with Spiritual Gold energy in the tree line.

This is all consistent with our findings from previous sessions that there appear to be two distinct phases to the Solar Noon transition period. The first being the cleansing and re-balancing of all the interconnected the energies, flowed by a pause and then the second phase (which seems to begin around 7 or 8 minutes before Solar Noon) being the collection and broadcasting of harmonious energies into the biosphere and surrounding landscape.

Refer to the images on page 19 to see an aerial view of where we were dowsing and where the Sun and Moon were at that time.

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

The above images from the suncalc and mooncalc websites centre on Grandfather Oak at Newstead where Chris and Mave monitored the aura of the tree and the dissolving New Moon cylinders over the Solar Noon transition period.

The top image shows the position of the Sun at Solar Noon (referred to on these websites as culmination) on 12th September which was at 13:01 BST. The blue circle shows where Sian was videoing herself dowsing the Bovis of the Blind Spring during both the Solar Noon and the mid-afternoon transition periods.

The bottom image shows the relative position of the Moon.

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

Sian – Blind Spring Bovis

Sian monitored the Bovis of the Blind Spring near to the pentagram tree and videoed herself doing it and narrating a commentary. A transcript of this can be found in the Appendix.

Just as the energies start changing prior to the official start time of an eclipse, so the water energies start to change before the Beacon Trees send the start signal for the Solar Noon period at 20 minutes before the exact time of Solar Noon. It is almost like a chain reaction precipitated by the water that then filtering through to the earth energies and trees.

The baseline reading for this Blind Spring seemed to be 14,000ub for both the Solar Noon and mid-afternoon transition periods.

Sian monitored from 12:52 (9 minutes before Solar Noon) to 13:02 (one minute after Solar Noon) and a summary is shown below:

<u>Time</u>	<u>Bovis</u>	<u>Pendulum Swing/Notes</u>
12:52	13,000 - 14,000ub	CW
12:53	14,000ub	ACW
12:54	14,000ub	CW
12:55	14,000ub	ACW
12:56	6,500ub	
12:57	10,000ub	
12:58	dropping then 0	
12:59	increasing to 6,500ub	CW “Feels strong in my hand”
	Dropping then 0	“Pendulum won’t move, like everything has gone still”
13:00	13,00- to 14,000ub	ACW big swing
13:01	14,000ub	CW big swing, “very zippy”
	12,000ub	
	14,000ub	

A playlist of the 6 videos that Sian took during this time can be found at:

<https://www.youtube.com/watch?v=47uY3OiPbc4&list=PLdqJDAiemhQg&pp=sAgC>

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

DOWSERS IN OTHER LOCATIONS

Richard Sears at Berry Castle, Huntshaw Woods, Devon

Solar Noon for the area was 13:13 hrs (12 minutes after Newstead)

Dowsing during the Solar Noon period on Friday 11th September, Richard stood by the Oak tree that he had dowsed for Part 1 and tracked the tree cylinder size every minute. His results sheet and full write up including photographs is in the Appendix.

The tree's cylinder moved from about 7 metres wide and then reduced to just pencil thin 25mm to 50mm, before going back to the 7m wide at the exact time of Solar Noon.

The cylinder over the Shaman's circle Blind Spring went from 6 metres down to 2 metres and then back again.

Halfway through, Richard was inspired to ask how many tree heights the pencil-thin tree cylinder went, and he got 10 tree heights.

At 13:05 (8 minutes before Solar Noon) Richard checked whether the 5 concentric rings were still around the tree and confirmed that they were. These rings were unaffected by the changing cylinder and the Solar Noon transition period.

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

Part 5 – Tree, Capped Vortices and Blind Springs after the New Moon cylinders dissolved

The aim of this part was to return to each of the trees, the Capped Vortex and the Blind Spring that we dowsed in Parts 1 to 3 and repeat the readings that we took earlier now that the Full/New Moon cylinders had dissolved.

NEWSTEAD

After Solar Noon Mave was unable to dowse the four bands of the New Moon cylinder that Sian had dowsed with her rods around Grandfather Oak in Part 1. However, Sian could still dowse the bands using rods.

Sian reported that the heights of the bands had reduced significantly from between 21 and 49 feet (6.4 and 15m) above ground level to between 12 and 16 feet (3.6 and 4.8m). The depths had also reduced, but not as dramatically as the heights, going from between 14 and 23 (4.2m and 7m) feet to between 9 and 11 feet (2.75m and 3.35m).

Bemused as to why Sian could still detect these bands with her dowsing rods but Mave could not detect them with her hand at 1.3 metres height, we decided to trace them up from ground level with our hands. Mave could feel them up to about 20cm above ground level but no higher and they felt hot and dense to the touch, suggesting they were still in a state of flux

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

DOWSERS IN OTHER LOCATIONS

Richard Sears at Berry Castle, Huntshaw Woods, Devon

After the Solar Noon transition period had finished at 13:13 hrs Richard paced out the 5th ring (aura) of the tree from the trunk and got 12 paces. After singing to it and giving it a blessing, the aura extended to 17 paces.

This cylinder was still present after the Solar Noon transition period since Richard did the dowsing on the day of the New Moon and the cylinders don't dissolve until the following day

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

Part 6 - Mid-Afternoon Transition Period (3pm to 3:15pm)

The aim of this part was not to undertake any dowsing during this time but instead see whether resting during this period revitalises the human metabolism. This is based on Paula Norman's comments about the effect of the 3pm time on human physiology and channelled information from Anne Pogson suggesting that a 10-minute nap during the mid-afternoon transition period will speed up the human metabolism.

NEWSTEAD

Experiment to check the effect of resting at this time on the human metabolism

During the mid-afternoon transition period at Newstead, Chris and Kate laid down under the pentagram oak with their eyes closed. Sian decided not to join this experiment, but to monitor and video the Bovis of the Blind Spring that she had also monitored and videos during the Solar Noon transition period instead. Mave sat quietly under the pentagram oak for the first half then joined Sian to discuss Sian's findings and to keep an eye on the time.

Kate reported that her personal Bovis and colour frequency remained at 10,000ub and blue. However, her energy levels had increased from 3-4 to 6-7 on a scale of 1 to 10 with 10 being the highest. Just before 3pm Kate reported her thoughts/feelings/emotions as "Very tired, heavy, low energy, happy and content but not buzzing, despite being tired." At 15:15 she reported "Feeling much brighter and less tired. Energy higher. Very chirpy. Enjoyed the experiment." During the meditation Kate said she saw blues, purples and greens behind her closed eyes. She came to about 15:12 and looked up at the tree canopy.

Mave reported that her personal Bovis had increased from 7,800ub to 10,800ub. Her personal colour remained at Ultraviolet, however the frequency of that increased by one octave from 3C to 4C, equivalent to moving from the mental layer of her aura to the intuitional. At 14:54 Mave described her thoughts/feelings/emotions as "buoyed up, energised but becoming calmer" and 14:57 she was yawning. At 15:15 her personal energy level had increased from 7/10 to 8/10 and she reported feeling "Still buoyed up. Happy." For the first time she did not feel exhausted on her return home from one of the Newstead project sessions.

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

Dowsing a Blind Spring during the first part of the Mid-Afternoon Transition Period

A transcript of the videos that Sian made describing the Bovis readings during this time can be found in the Appendix. A playlist of the 5 videos that she took during this time can be found at:

https://www.youtube.com/watch?v=gpd44lu3ZJ4&list=PLXpi_sk86e4c&pp=0gcJCf8COCosWNinsAgC

Sian sat on the Blind Spring that she had been drawn to in the morning and where she had also dowsed the Bovis during the Solar Noon transition period. She held her pendulum steady over the Bovis chart and took continual measurements which she videoed between 14:57 and 15:02. It seems that for the water energies this is the most significant period whereas the Dragon Currents and Capped Vortices tend to disappear around 15:00 to 15:02 and return above ground around 12 minutes later.

Sian, who is able to hear and sense both water and earth energies, noted that the mid-afternoon period feels different to the Solar Noon one with the Solar Noon one feeling more powerful. Her pendulum over the Bovis chart also behaved differently, feeling less responsive and more stilted during the mid-afternoon period.

The baseline reading for this Blind Spring seemed to be 14,000ub for both the Solar Noon and mid-afternoon transition periods.

<u>Time</u>	<u>Bovis</u>	<u>Pendulum Swing/Notes</u>
14:57	14,000ub	CW
14:58	8,000ub	ACW
14:59	dropping	CW bigger
15:00	0	CW then stopped
15:01	6,500ub	CW fast, big swing, getting bigger
15:02	16,000ub dropping	
15:03	14,000ub increasing to 20,000ub 20,000ub falling back to 14,000ub	“Really buzzing in my fingers”
15:04	14,000ub	

In session 5 of the project, on 11th July, Sian was monitoring the Bovis of another Blind Spring close to this one while Maria was monitoring its colour frequencies using the circular colour spectrum chart and Shaun Holbrow was measuring the width of the associated water lines.

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

At the same time as Sian recorded 0 on the Bovis chart, Maria found her pendulum was no longer responding over the colour chart and Shaun found he could no longer dowse the energy of a water line coming away from the Blind Spring with his rod. He then checked the other water lines and found the same. This happened at 14:55. At 14:58 the energies came back momentarily and then went again, taking a minute or so to return. All in all, Shaun observed the water line to have taken around 4 minutes to collapse and then come back online properly.

This seemed to pretty much mirror the cycle Sian observed today but with a 1-2 minute timing difference.

During Session 5, Anne Pogson channelled that this is “an energy field around us from the atmosphere related to the Sun’s power. A natural energy field that happens at this time of day”

On 11th July the weather was hot and sunny with a lot of sunlight all day, and we were only around two weeks after the Summer Solstice when the sun reaches its highest annual elevation in the sky and we have the around 15.5 hours of daylight. By comparison, on 12th September it was overcast with only a small amount of sunlight, and we were around two weeks from the Equinox where there will be around 12 hours of daylight, the sun not climbing as high in the sky at Noon.

Sian commented in her videos that she was bemused by the direction and intensity of the pendulum swings over the Bovis chart and Maria’s colour chart. We ruled out anything to do with yes/no responses as what Sian was doing was vibrational dowsing which means the pendulum is responding to an energy field and not to questions in the dowser’s mind that require a yes/no answer.

Mave decided to observe the mid-afternoon transition period in her garden on Wednesday 16th September. She monitored the energy torus around the Blind Spring on her lawn from 14:45 to 15:15, Mave noted that the energetic torus was changing its direction of rotation and size every now and again during the first half of the monitoring period, consistent with what Sian’s pendulum had been doing in the videos of the mid-afternoon transition period. We therefore concluded that the clockwise and anti-clockwise swings of the pendulum were showing the size, strength and direction of the rotating energetic torus around the Blind Spring while the backwards and forwards swings were indicating its Bovis reading. This would also apply to the Solar Noon period.

It is possible that the changes to the water at this time that Sian has been noting may trigger the energy fields of the Dragon Currents and Capped Vortices to go below ground at this time and may also trigger the human physiological reactions given that the human body is a large percentage water. As Veda Austin has shown, water has a consciousness which responds to human consciousness and that of its environment.

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

Lunar Transition Periods and Trees

Tree Deva Energy Fields cycling with the lunar phases

Mave monitored the size of the spiralling golden energy field around the Poplar Tree Deva in her garden between 11th July and 13th August 2026. She found that just as Gordon Field says, the Tree Deva energy fields expand and contract with the lunar phases, the energy field of the Tree Deva was widest at the Half Moons at 16 metres and narrowest at the New and Full Moons when the vertical cylinders are present on the trees.

DATE	MOON PHASE	POPLAR TREE DEVA IN MAVE'S GARDEN		
11/07/2026	Waning Crescent	9.00		
12/07/2026	Waning Crescent	6.00		
13/07/2026	Waning Crescent	1.00	3m before Solar Noon	Cylinders form at Solar Noon
14/07/2026	New Moon 10:44	0,25		Cylinders narrowest
15/07/2026	Waxing Crescent	1.00	3m after Solar Noon	Cylinders dissolve at Solar Noon

21/07/2026	First Quarter 12:06	16.00		
22/07/2026	Waxing Gibbous	14.50		
23/07/2026	Waxing Gibbous	13.50		
24/07/2026	Waxing Gibbous	11.50		
25/07/2026	Waxing Gibbous	9.00		
26/07/2026	Waxing Gibbous	6.00		
27/07/2026	Waxing Gibbous	3.00		
28/07/2026	Waxing Gibbous	1.00		Cylinders form at Solar Noon
29/07/2026	Full Moon 15:36	0,25		Cylinders narrowest
30/07/2026	Waning Gibbous	1.00		Cylinders dissolve at Sunset
31/07/2026	Waning Gibbous	6.00		
01/08/2026	Waning Gibbous	9.00		
02/08/2026	Waning Gibbous	11.50		
03/08/2026	Waning Gibbous	13.50		
04/08/2026	Waning Gibbous	14.50		
05/08/2026	Waning Gibbous	15.50		
06/08/2026	Last Quarter 03:22	16.00		
07/08/2026	Waning Crescent	14.50		
08/08/2026	Waning Crescent	13.50		
09/08/2026	Waning Crescent	9.50		
10/08/2026	Waning Crescent	6.00		
11/08/2026	Waning Crescent	1.00		Cylinders form at Solar Noon
12/08/2026	Eclipsed New Moon 18:37	0,25		Cylinders narrowest
13/08/2026	Waxing Crescent	1.00		Cylinders dissolve at Solar Noon

Gordon Field notes that the water associated with Beacon Trees and Springs is tidal and this may be what causes all the fluctuations of underground water noted during this project, especially at times when the Sun and Moon's are at specific positions in relation to one another and the earth.

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

Tree Devas during the Lunar Transition periods

Mave made a list of the lunar transition periods between the mid-July and the end of the project and observed those where it was practical to do so. She found that Tree Devas release the energy that they have been collecting and storing into the Biosphere during these times.

Lunar Transition Periods at Newstead from mid July 2026 to the end of the Project.

The periods monitored are those highlighted in blue and full data from the observations is in Appendix 2. The others are show in order to highlight the cycle of lunar transition periods and how they only occur when a particular location is in daylight hours.

14 th July 2026	New Moon 10:44am	Lunar transition period 10:24 to 10:44
21 st July 2026	First Quarter 12:06pm	Lunar transition period 11:46 to 12:06
29 th July 2026	Full Moon 15:36pm	Lunar transition period 15:06 to 15:36
6 th August 2026	Last Quarter 03:22am	No Lunar transition period, no daylight
12 th August 2026	New Moon 18:37pm & Solar Eclipse max at 18:47pm	
20 th August 2026	First Quarter 03:47am	No Lunar transition period, no daylight
28 th August 2026	Full Moon 05:13am & Lunar Eclipse max at 05:14am before Dawn	
4 th Sept 2026	Last Quarter 08:52am	Lunar transition period 08:32 to 08:52
11 th Sept 2026	New Moon 04:28am	No Lunar transition period, no daylight
18 th Sept 2026	First Quarter 21:44pm	No Lunar transition period, no daylight

On 29th July Mave monitored the Solar Noon transition period at Newstead and then returned home to monitor the Full Moon Lunar transition period two hours later. She found both periods to last 10 minutes longer than usual with the Beacon Trees sending up the sphere that morphs into a rotating toroid 30 minutes before the exact time of Solar Non and Full Moon, Normally, this happens 20 minutes before.

LOCATION: sitting under
pentagon oak

Take baseline readings of your personal fields at the start and end of the period and make a note of what you did in the intervening time – napped, meditated, sat quietly with eyes closed, chatted with another person etc. + content

14-51 Very tired, heavy, low energy, happy but not "buzzing" deep
being tired!

TIME	BOVIS Score	HFC	ENERGY LEVEL 1 - 10	THOUGHTS, FEELINGS, EMOTIONS
15:00	10,000	Blue	3-4	
15:01 to 15:14				Saw blues, purples & greens behind my closed eyes Came to about 15.12 then looked up at the tree canopy
15:15	10,000	Blue	6-7	Feeling much brighter less tired. Energy high very chirpy! Enjoyed the experience!

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

Sian Wilson on site at Newstead 12/9/26

Transcript of Sian's Solar Noon transition period videos

Note that Sian's watch was a few minutes fast so the time she states in the videos is incorrect and the times shown here have been given from the time stamp on the videos.

Video 1. 12:52 (9 minutes before Solar Noon)

Show me the energy of the Blind Spring that I am sat on at the moment.

It's between 13,000 and 14,000ub

Video 2. 12:52 to 12:53 (9 to 8 minutes before Solar Noon)

My pendulum is now showing me a clockwise direction

It will show me the Bovis of the Blind Spring and then we get an anticlockwise swing.

We are still trying to work out what this is. Whether it's the energy coming off the Blind Spring, a water vortex that I am sat on.

It goes back to 14,000 again. Its holding steady at the moment.

Video 3. 12:55 to 12:57 (6 to 4 minutes before Solar Noon)

Bovis still 14,000ub and the pendulum now swinging in an anticlockwise direction.

This is what I have been finding as I have been measuring the Blind Springs. What it is doing, we are not quite sure. Whether this is showing us the direction of a vortex coming off a blind spring. Then normally it will start spinning the other direction, clockwise for me now over 14,000 and then it will go back to showing me what the actual measurement is.

I'm waiting for the Solar transit. We're going now. The Solar Transit is kicking in, and we are going down 6,500ub

Video 4. 12:57 to 12:58 (4 to 3 minutes before Solar Noon)

We went down to 6,500ub and we are going up again to 10,000ub

Going down, down, down and we've lost it now. On zero. We have lost the energy of the water.

The pendulum is building up speed now like it is being pushed by somebody else. It feels quite strong in my hand as I am doing this.

Its climbing up again. It's going back to 6,500ub.

Now its swinging in a clockwise direction over 6,500. The pendulum is slowing down.

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

Video 5. 12:59 to 13:01 (2 to 0 minutes before Solar Noon)

We're at 6,500ub still. Moving down again. My pendulum has decided to stop and doesn't physically want to do anything. It's like everything has gone still.

And we're off again. Climbing back up. 13,000, 14,000 so it might be that we are just booting back up.

Now we are going into a big anticlockwise swing, really zippy, and then to a big clockwise swing and back to 14,000ub

Video 6. 13:01 to 13:02 (Solar Noon at 13:01)

We are dipping down again slightly from 14,000ub to 12,000ub then back up to 14,000ub. It feels like the transit is stabilising. Its finished. Although the transit on the apps are saying a certain time, we seem to get a reduction in Bovis around 20 minutes before.

This is a link to a playlist of the 6 videos:

Transcript of Sian's mid-afternoon transition period videos

Note that Sian's watch was a few minutes fast so the time she states in the videos is incorrect and the times shown here have been given from the time stamp on the videos.

Video 1. 14:57 to 14:59

The time is 14:57 and we are currently on 14,000ub on the Blind Spring and my pendulum is showing me a clockwise direction.

It's going back to anticlockwise

It's over 8,000ub

We lost the momentum for a bit then but it's getting going again.

Going down again. A bit more of a stop and start than at Solar Noon

Clockwise now and getting more powerful in the swing.

Video 2. 14:59 to 15:00

Still going clockwise

Now we are changing and we've lost the frequency. We are on zero and the pendulum has stopped

Video 3. 15:00 to 15:01

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

It's really not as powerful as at Solar Noon. It feels more stilted and the pendulum doesn't feel as responsive

It seems to be over 6,500ub and is fighting to go in a clockwise direction with the spin getting bigger.

Video 4. 15:01 to 15:02

Still spinning clockwise, really large fast spin covering the whole chart and getting bigger and bigger

Seems to be at 16,000ub now

Going back down to 14,000ub

Video 5. 15:02 to 15:04

We seem to be holding at 14,000ub

13,000, back to 14,000 Its really fluctuating

15,000, 16,000, 17,000, 18,000, 19,000

I can feel it in my fingers, it's really buzzing

20,000, 19,000, 18,000, 17,000, 16,000, 15,000, 14,000

Something that we noticed last time with this 3pm (ish) transit was that it seemed to go down and then there did seem to be a bigger spike of energy as opposed to the Noon transit.

The fluctuation from 14,000 to 19,000 might account for the water line dowsed on the surface [in Session 5 by Shaun Holbrow.] The water line expanded from around 40cm to around one metre wide for a minute or two and then back to 40cm

If this is demonstrating the same thing, then that fluctuation from 14,000ub to 19,000ub might account for why when someone was dowsing the water line on the surface, it took a leap in measurement.

It seems to be steadying itself at 14.000ub now.

This is a link to a playlist of the 5 videos:

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

Richard Sears at Berry Castle, Devon 11/9/26

NEWSTEAD PROJECT 2026 – Remote work in connection with Session 7 - Oak Tree at Berry Castle, an Iron age fort in Huntshaw Woods near Great Torrington in North Devon.

On the basis that Mave's handout allows us to dowse for New Moon energies affecting trees between 10th and 12th Sept, being away and unable to be at Newstead, on Friday 11th Sept I went to the above location before and during Solar Noon.

Ten years ago, Devon Dowzers visited Berry Castle when there was an open day organised by the Friends of Berry Group. 300 people attended and various archaeological and other groups were there - including 20 of us from DD. It is in the middle of the woods, but as I was brought up in the nearest house 200m away I was eager to attend!

Two months later 3 of us spent 2 whole days doing a survey of the 30 no roundhouses, chief's hut, blacksmith area and sacred circle etc. (I was with Gwynn Paulett and Nigel Twinn). The 'fort'.... i.e. settlement was enclosed by a 'vallum & fosse' type mound and ditch on 4 sides.....and in one corner we found a sacred (female) circle with the shaman's hut next to it. The circle was enclosed by tall wooden posts and in the centre was a 12ft tall stone. No men were allowed into the circle, and it was over 4 blind springs and the intersection of many energy lines.

Along the south side mound there are several beautiful oak trees 200 to 300 years old. What I thought might be interesting would be to dowse one tree over the 20 min period and the strongest spiral in the shaman's circle if I could, although that was about 100m away.

On arriving at about 12 o'clock I asked the rods which tree I should work and they clearly pointed to one.....and asking if it was happy with that and it saying yes, I asked how old it were: 260 years, if it had a cylinder around then and the ans was yes.... approx. 7m diameter, how deep below ground did it go – about 15m, and it went over 3 tree heights high but less than 4.

There were also 5 concentric rings around the tree and energy lines between all of the oaks (all interconnected).

Above – Nigel Twinn in 2016 measuring out the roundhouses

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

For the Shaman's circle I found the strongest vortex over a blind spring and marked it with a bit of wood. Standing on it, I could feel a strong tingling going vertically through my body and knew I was on the intersection point.

Stepping aside I asked how wide was the central vortex of the shaman's circle, and it was 6 to 8 m wide and female 60%/40% male (one inside the other) The cylinder was 5m above ground and 5m below.

Solar Noon for this area is at 13.13 hrs (12 mins different from Newstead) and using the sheet I stayed by the oak tree and tracked the cylinder of it every minute, and occasionally looking over the shaman's circle checked the width there.

The tree's cylinder moved from about 7m wide and then reduced to just pencil thin 25mm to 50mm, before going back to 7m wide at the 20 min point. (See attached). The one over the circle went from 6m down to 2m and then back again.

Halfway through (I don't know why) I asked how many tree heights the pencil thin cylinder went, and it said 10 tree heights! Also, at 13.05 I checked if the 5 concentric rings were still around the tree, and they were. Even though the cylinder's width was changing the rings were unaffected.

After the 20 min period I paced out the 5th ring (aura) from the trunk and it was 12 paces from the trunk. Then singing to it (!) and sending a blessing etc it 2 mins later moved out to 17 paces.

Above a view across Berry showing the tree to the most right being my tree.

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

NEWSTEAD DOWSING RESEARCH PROJECT 2026 - SESSION 7

SOLAR NOON TRANSITON PERIOD, ^{11th} 12TH SEPTEMBER 2026, NEWSTEAD

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

APPENDIX 2 – LUNAR TRANSITION PERIODS

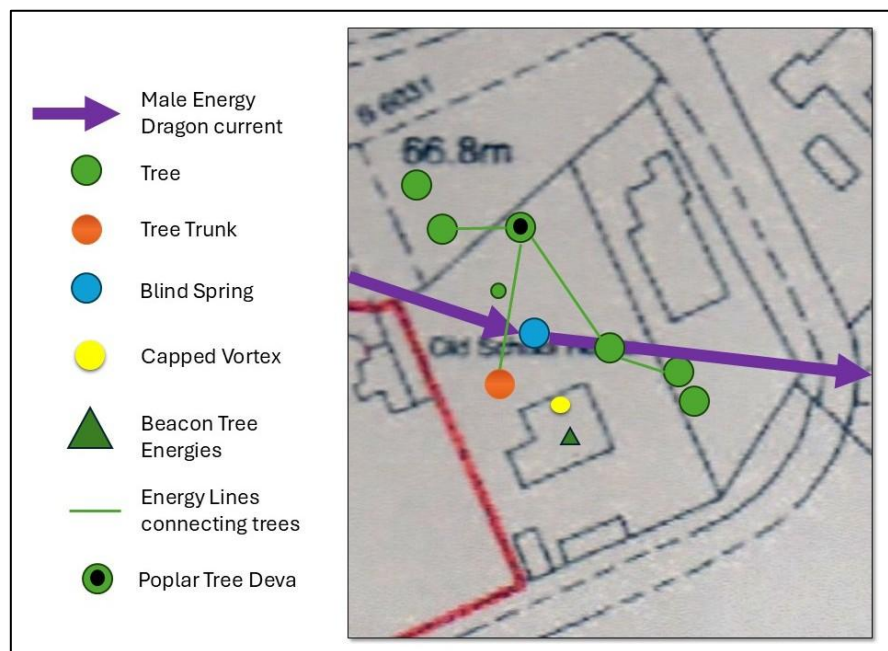

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

Mave's Garden during the New Moon Transition Period 14/7/26

Introduction

Mave has always been aware that there are subtle differences between the Solar and Lunar transition periods. However, when she researched them back in 2015 to 2017, she wasn't aware that trees played a part in this process so was unable to understand what the differences were. After studying Gordon Field's research into trees, she decided to dowse three Lunar Transition periods that took place in July and August 2026 in her garden observing the energies of Trees, Capped Vortices where trees used to stand, a 1.25 metre high tree trunk, an Earth Energy Dragon current, and a Blind Spring.

This diagram shows the relative positions of the features in Mave's garden that she observed during the Lunar Transition periods and the photograph shows them from the southwest with the poplar tree to the far left and young plum tree to the far right, and the Blind Spring marked by a small megalith water feature, in the centre.

The tall female Poplar tree in Mave's garden dowsed as being a Tree Deva. Its energy field rises to 7 tree heights above it. Gordon Field describes a Tree Deva as a special type of tree that helps keep Earth's Biosphere in balance by collecting and releasing energy in line with the phases of the Moon.

It occurred to Mave that the Tree Devas probably played a significant part in the Lunar Transition periods and this could be when they released the energy that they had been collecting for the past 7 days or so into the Biosphere.

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

Surrounding the Blind Spring in the middle of the lawn are the usual geodetic features of geospiral with necklace surrounded by primary and secondary haloes further out. The Blind Spring is surrounded by large stacked energetic toroids that rise and fall during the various transition periods and are consistent in size with the positions of the geodetic geospiral and haloes. An oak Beacon Tree once stood in the centre of what is now Mave's house and continues to function as pure light, confirmed by Gordon Field. Several of the existing trees are connected by the horizontal energy lines that run one metre above ground level.

Tree Devas and the Lunar Transition Periods

Mave found that the second half of the Lunar Transition period is very similar to the Solar transition periods. However, because the Trees and Capped Vortices are surrounded by narrow double-edge cylinders at this time, the first half of the Lunar transition periods is subtly different to the same part of the Solar Transition periods.

This is an excerpt from Mave's summary of Gordon Field's work:

***Tree Deva** is a term used by Gordon Field to describe trees that are effectively the Shining Ones of the forest that help strengthen Earth's Biosphere by collecting and then releasing energy through the phases of the Moon. Whereas Beacon Trees tend to be male, Tree Devas can be either male or female trees. In 2016, Gordon observed that the Tree Devas became surrounded by the same golden light that spirals around the cone of energy that envelops Beacon Trees. The canopy of the tree, its trunk and roots below are a ball of golden light [probably a torus]. As well as a ball of light, they also have energy fields that go around them. Initially these formed just above the ground and varied in size depending on their contact with us and all other creatures. However, Gordon has found that the energy fields of Tree Devas are now 7 heights above the ground.*

*The energy field of a Tree Deva **fluctuates with the phases of the Moon**. It spirals out from the tree a day at a time and reaches the edge of its overall energy field after seven days. Then the bands of energy retreat day by day rising up into the Biosphere. At first these spiralling bands were only the height of the tree, but with each increase in energy they went higher, and the energy now rises up to three heights above and goes down below the tree for two heights.*

With the annual increases in energy that Gordon has observed, some Tree Devas have transformed into Beacon Trees.

[Note: the term 'Deva' should not be confused with the same word sometimes used for Spirits attached to a Tree, local guardians or Elemental beings.]

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

NEW MOON LUNAR TRANSITION PERIOD 14/7/26

On 14th July 2026, Mave observed the New Moon Transition period in her garden. New Moon was at 10:44am that day.

Baseline readings giving averages for the 30-minute period from 9:30am to 10am

Esoteric Colour of the Sun predominating in Sunlight – Indigo

Male Dragon current.

Bovis 60,000ub, width away from Blind Spring 7m, Colour Frequencies 78% Infrared (Yang), magnetic + 4C (octave 4) and 22% Ultraviolet (Yin), magnetic + 4C (octave 4)

Blind Spring on Lawn

Top of water dome pulsating at 12-13 metres deep, 60,000ub

Top of lower torus 1m above ground, base of upper torus 2.5m above lower torus

Primary Halo rotating Clockwise, 7,000ub

Secondary Halo rotating Anticlockwise 9,000ub

Note: these two haloes reverse direction every 8 minutes or so

Capped Vortex in Bay Window (observation point)

Top of water below 7-8 metres deep, 4,500ub

Predominant direction of flow Anticlockwise and down

New Moon double-edged Cylinder surrounding it 35cm diameter with 2cm width

Beacon Tree Energies in Living Room

45,000ub, New Moon cylinder 65cm diameter, Colour frequency Green, Magnetic + Divine Feminine (octave 6)

Trees

Plum Tree, Poplar Tree Deva and both Sycamores on grass verge gave readings of 6,000ub colour frequency positive green, magnetic +, 3C (octave 3)

All had double-edged cylinders of energy surrounding their trunks, much narrower than their canopies.

Energy Line connecting Plum and Polar Trees

Core 10cm diameter, line active with two spirals of opposing polarity, overall width at maximum point 46cm, Height of core above ground 1 metre

Colour frequencies 50% Blue and 50% Orange, both magnetic + 5C (5th Octave)

Not connected to Beacon Tree energies

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

Readings during New Moon transition period from 10:23am to 10:44am

Observations taken from Capped Vortex in Bay Window of Mave's home overlooking garden and living room

At 10:23am, 21 minutes before New Moon:

The Capped Vortex in the Bay Window close to where Mave was sitting felt hot, but she could not detect any pulsating nor a feeling of expectation that she sometimes observes prior to other transition periods

At 10:24am, 20 minutes before New Moon:

The Beacon Tree energies in the Living Room sent up a sphere of energy that rose to around 5m above roof level and started spinning rapidly anticlockwise turning it into a donut shaped communicating torus

At 10:25am, 19 minutes before New Moon:

The polarity reversal took place.

The Capped Vortex in the Bay Window had changed from a predominantly anticlockwise and down direction of flow to clockwise and up.

The dome of water beneath the Blind Spring was no longer pulsating upwards but was sucking downwards *[This may be why the Capped Vortex spawned by this Blind Spring started pushing energy upwards that was previously going downwards. The downward flowing energy in the Capped Vortex would be sucked towards the Blind Spring whilst it was pulsating upwards. However, when the Blind Spring started sucking downwards instead it would start pushing energy towards the associated Capped Vortices which would then appear to reverse polarity and start rising up, creating a siphon effect. As Maria observed at Newstead, this is a bit like crossing the Equator when water that flows down a plug hole one way in the northern hemisphere flows the opposite way in the southern hemisphere]*

At 10:26am, 18 minutes before New Moon:

The Male Dragon current had risen in Bovis from 60,000ub to 75,000ub

The Capped Vortex in the Bay Window had risen in Bovis from 4,500ub to 7,500ub

The tree line connecting the Plum Tree and Poplar Tree Deva had risen in Bovis from 6,000ub to 10,000ub. It was 100% green now with a frequency of + Divine Feminine (6th Octave) instead of 50% blue and 50% orange +5C (5th Octave)

At 10:27am, 17 minutes before New Moon:

The upper and lower toroids on the lawn had both moved slightly to be only 2m apart whereas they were 2.5m apart previously.

At 10:28am, 16 minutes before New Moon:

The golden energy in the cylinders surrounding the tree trunks was spiralling upwards

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

The trees were all reading as 80,000ub (previously 6,000ub) with colour frequencies still all positive green but risen from +3C (3rd octave) to + Divine Feminine (6th Octave)

At 10:29am, 15 minutes before New Moon:

The Esoteric Colour of the Sun predominating in Sunlight had moved from Indigo to the cusp of Indigo and Blue.

At 10:30am, 14 minutes before New Moon:

The tree line between the Plum and Poplar Tree Deva was pulsating

All the tree energies were spiralling upwards except the Beacon Tree (which is not a physical tree)

At 10:31am, 13 minutes before New Moon:

The cylinder around the Capped Vortex in the Bay Window had increased in diameter from 35cm to 80cm

The cylinders around the tree trunks had widened to temporarily encompass the entire tree but were still cylindrical in shape as opposed to mirroring the canopy of the trees.

At 10:32am, 12 minutes before New Moon:

The tree energies started spiralling downwards after having spiralled upwards for around 2 minutes

The Capped Vortex in the Bay Window temporarily changed from upwards and clockwise to downwards and anticlockwise *[suggesting something had happened with the water dome of the Blind Spring]*

At 10:33am, 11 minutes before New Moon:

The cylinders around the trees that had widened out started shrinking again

The cylinder around the Capped Vortex in the Bay Window shrank back to 36cm diameter from its temporary width of 80cm that it had been for around 2 minutes

The predominant direction of flow of the Capped Vortex in the Bay Window changed from downwards and anticlockwise to upwards and clockwise *[suggesting something had happened with the water dome of the Blind Spring again]*

At 10:34am, 10 minutes before New Moon:

The Male Earth Energy Dragon current started to expand and contract its bands just as it does at Solar Transition periods

At 10:35am, 9 minutes before New Moon:

The tree line between the Plum and Poplar Tree Deva was no longer active. The core was still 10cm in diameter, but the two spiralling currents of opposing polarity had ceased.

The width had reduced to 50cm from 210cm at its widest when the line was active.

At 10:36am, 8 minutes before New Moon:

The Male Earth Energy Dragon was still expanding and contracting its bands just as it does at Solar Transition periods. The sequence was cycling through the colour

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

frequencies in the same way as the Capped Vortices spin their chakras earlier in the process. It went from Red to Violet to Orange to Indigo to Yellow to Blue ending at Green.

At 10:40am, 4 minutes before New Moon:

The Male Earth Energy Dragon current stopped expanding and contracting its bands just as it does at Solar Transition periods. It did this for around 4.5 minutes

At 10:41am, 3 minutes before New Moon:

The line between the Plum tree and Poplar Tree Deva had disappeared

The energy of the Capped Vortex in the Bay Window had disappeared

The energy of the Male Dragon Current had disappeared

The Blind Spring energies were quiet

The cylinders were still tight around the tree trunks (???)

The atmosphere felt quiet and flat but not particularly calm. More like something was missing. Mave felt a bit deflated and bored

[This is exactly the same as happens for around 3 minutes at the end of Solar Transition periods, and also very similar to what happens during the 12-minute mid-afternoon transition periods]

At 10:42am, 2 minutes before New Moon:

Mave observed a slight feeling of expectation returning and no longer felt deflated or bored

At 10:43am, 1 minute before New Moon:

The line between the Plum tree and Poplar Tree Deva had returned

The energy of the Capped Vortex in the Bay Window had returned

The energy of the Male Dragon Current had returned

Everything had returned to its baseline polarity

The atmosphere felt clearer and cleaner and the garden looked pretty and vibrant

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

Mid-afternoon transition period at New Moon from 14:53pm to 15:12pm

At 14:53 (7 minutes before the mid-afternoon transition period)

Esoteric Colour of the Sun predominating in Sunlight – cusp of Yellow/Orange

At 14:55 (5 minutes before the mid-afternoon transition period)

Cylinder still tight around tree Vortices and Capped Vortices

Lines and Vortices gone underground but it doesn't feel flat.

Male Dragon Current 6,000ub

Capped Vortex in the Bay Window 4,500ub

Blind Spring 7,500ub

Water Veins emanating from Blind Spring 7,500ub

At 14:56 (4 minutes before the mid-afternoon transition period)

Beacon Energies colour frequency Green +4C (Octave 4)

Blind Spring Energies colour frequency Blue +4C (Octave 4)

Capped Vortices colour frequency Infrared + 1C (Octave 1)

Energy Lines colour frequency Red + 1C (Octave 1)

At 14:58 (2 minutes before the mid-afternoon transition period)

Lines and Vortices have returned and now seem to be prepared for the Mid-Afternoon Transition period *[a bit like restarting a laptop or mobile phone as opposed to completely rebooting it].*

Esoteric Colour of the Sun predominating in Sunlight now Orange

Beacon Energies colour frequency Green + Divine Feminine (Octave 6)

Blind Spring Energies colour frequency Blue + Divine Feminine (Octave 6)

Capped Vortices colour frequency Infrared + 4C (Octave 4)

Energy Lines colour frequency Red + 4C (Octave 4)

[so the colours have remained the same but their frequencies have increased].

At 15:01 (1 minute after the start of the mid-afternoon transition period)

The energy of the Lines and Vortices has gone (descended)

The cylinders around the tree trunks have also gone (descended)

Beacon Tree Energies – no reading for colour frequency, Bovis 2,000ub

Blind Spring Energies colour frequency Blue - 1C *[polarity has changed from magnetic/horizontal + to electric/vertical]*

Capped Vortices giving no reading for colour frequency, Bovis 2,000ub

Energy Lines giving no reading for colour frequency, Bovis 2,000ub

[No reading is what the Newstead team refer to as a “crash” and 2,000ub is the same reading as Mave gets when the energies are at rest overnight – the lowest possible positive Bovis reading for something that still has lifeforce energy]

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

At 15:03 (3 minutes after the start of the mid-afternoon transition period)

The atmosphere feels dead and flat like there is something missing [*makes sense if energies have literally been taken out of our realm into the Elemental realm i.e. another dimension*]

The energy of the Lines including the tree line, the Capped Vortices, the Beacon Tree have completely gone

No polarity reversal took place beforehand

Blind Spring Energies colour frequency Blue -1C Electric/Vertical (compared to magnetic/horizontal and much higher frequency earlier), depth 12-13m, Bovis 4,000ub (compared to 7,500ub earlier), pulse much slower & associated water veins flowing a lot slower

Upper and Lower toruses in same position above Blind Spring

Primary and Secondary Haloes are still in the same position with 2,000ub (compared to 7,000ub & 9,000ub this morning)

At 15:10 (10 minutes after the start of the mid-afternoon transition period)

Mave could feel the energies starting to ramp up again

The cylinders were slowly rising back up around the tree trunks

At 15:11 (11 minutes after the start of the mid-afternoon transition period)

The cylinders around the tree trunks were now fully back

At 15:12 (12 minutes after the start of the mid-afternoon transition period)

The Poplar Tree Deva energies surged back but they don't seem to be 7 heights high now. Do the cylinders constrain them?

Mave's Garden during the Half Moon (First Quarter) Lunar Transition Period 21/7/26

Observations

Sitting outdoors at stone table a few metres from Poplar Tree Deva. Table stands in a Capped Vortex

11:30 (35 minutes before First Quarter)

Poplar tree energy field massive. 26 Mave paces or 16 metres across lawn towards house. This is the widest it gets all month. At the Summer Solstice it was 20m due to a combination of Solstice and FQ

11:35 (30 minutes before First Quarter)

Line connecting Plum and Poplar trees at 1m above ground present. Core 4cm and warm. Two weak spirals around core, 50% blue & 50% orange. Flow predominantly TOWARDS Poplar tree.

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

11:37 (28 minutes before First Quarter)

Poplar Tree Deva 18,000ub, positive green, magnetic +3C, no cylinder in energy field like at New Moon or Full Moon

11:38 (27 minutes before First Quarter)

Male neighbour outside (grounding me?)

11:40 (25 minutes to First Quarter)

Male Dragon current behaving normally, 60,000ub. (Same as at this time at New Moon). Not connecting with trees. Blind Spring 50,000ub, 12-13m depth as per New Moon.

11:41 (24 minutes before First Quarter)

Upper torus 6 metres above lawn. Higher than as Solar Noon. Lower torus just poking above ground so 5-6 metre gap between the two.

11:42 (23 minutes before First Quarter)

Primary Halo rotating anticlockwise, 7,500ub, slightly higher than at New Moon

Secondary halo rotating clockwise, 9,500ub, slightly higher than at New Moon

Weather about the same as New Moon, hot and dry. No rain in the last week.

Bay Window Capped Vortex baseline readings as at New Moon but no cylinder around it so its width expands around the carved tree root chair that stands in it.

11:44 (21 minutes before First Quarter)

Beacon Tree energies in Living Room 65,000ub

11:45 (20 minutes before First Quarter & official start of Lunar Transition period)

Sphere slowly rising within Beacon Tree energy field, rises above house, starts spinning anticlockwise and becomes a communicating donut-shaped torus for around 30 seconds before slowing, becoming a sphere again and dropping back down.

Aura of Poplar tree deva starts pulsating

The line between the Poplar and Plum trees has doubled in width with flow equal in both directions.

11:46 (19 minutes before First Quarter)

Energy suddenly flows away rapidly from the Poplar tree, filling its aura which encompasses the Blind Spring on the lawn but not the Plum Tree.

11:47 (18 minutes before First Quarter)

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

Poplar Tree Deva's energy field contracting then expanding in pulses. Each time it pulses it becomes smaller, gradually pulling in towards the tree. It appears to be gathering and collecting above ground. [\[going through the chakra spinning phase?\]](#)

11:49 (16 minutes before First Quarter)

The Poplar tree's aura has now contracted to around half its width. 8 metres out now instead of 16.

Line present between Poplar Tree and tree 1.5-metre-high trunk.

11:50 (15 minutes before First Quarter)

The Poplar tree's aura has now contracted to around a quarter its width. 4 metres out now instead of 16. I'm now outside its energy field and it feels different.

11:51 (14 minutes before First Quarter)

The Poplar tree's aura has now contracted to about 1m around its trunk and become a cylinder. Huge surge of energy downwards into ground from high above the tree. Goes deep below ground then surges back up again from below and back up into the cosmos. [\[central channel breath aka Dr Sue Morte – is the contracting of the energy field like locking the anchor points?\]](#)

11:52 (13 minutes before First Quarter)

Energy settles into the trunk of the tree again.

11:53 (12 minutes before First Quarter)

The Poplar tree's energy field is expanding again but this time it feels calmer.

11:54 (11 minutes before First Quarter)

The energy field of the Poplar tree is about 6 metres out now. Not rushing or cycling this time, just gradually increasing again. Slowly expands to 8m out.

11:55 (10 minutes before First Quarter)

Tree line between Plum and Poplar trees disappears and then comes back quickly afterwards. Much wider now at around 2 metres width with strong spirals of opposing polarity, predominant energy flowing AWAY from Poplar towards Plum Tree [\[flowing in opposite direction before the start of this Lunar transition period\]](#)

11:56 (9 minutes before First Quarter)

The energy field of the Poplar tree is radiating around 14m from its trunk now, compared to the 16m baseline. Seems to be sending a lot of energy to the plum tree.

11:57 (8 minutes before First Quarter)

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

The Poplar has stopped sending energy to the Plum tree now. The line between them is quiet and narrow with no spirals and only its core. Turned off with no flow.

11:58 (7 minutes before First Quarter)

The line between the Plum and Poplar trees collapses altogether and cannot be dowsed. The Dragon Line in the garden can't be dowsed above ground either and no readings are determinable for its energy field. The stone table that I am sitting at seems to be sucking me underground. The atmosphere has an eerie stillness. [Did this happen slightly earlier than it does at Solar Transition periods?](#)

11:59 (6 minutes before First Quarter)

The energies are still gone and silent. I can hear cars and people in the 3D world, but it feels like something is missing in the background. No nature spirits around.

12:00 (5 minutes before First Quarter)

I can feel the tree energy coming back up through the ground very slowly, it has a low dense frequency and seems to be going Boom! ... Boom!

12:01 (4 minutes before First Quarter)

Energy rising slowly stopping at 4m to 3m below ground for a while but went much deeper earlier.

12:02 (3 minutes before First Quarter)

Energy is rising back towards the surface now but hasn't broken ground yet.

12:03 (2 minutes before First Quarter)

Everything is back.

The line between the trees flows AWAY from the Poplar to the Plum tree.

Poplar tree aura is 15.6m now. 40cm narrower than before.

Birds chattering again. Energies feel normal

12:04 (1 minute before First Quarter)

Beacon Tree energies in the house sends the sphere back up again which becomes a communicating donut-shaped toroid for about 30 seconds before becoming a sphere again and descending.

12:05 FIRST QUARTER (official end of Lunar Transition Period)

Everything seemed to be about a minute early.

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

Newstead at the Full Moon 29/7/26

Solar Noon at Newstead 13:11 today and Full Moon at 15:36

Baseline observations at Newstead 10am to 11am

I remained at Newstead until 13:30 to monitor the Solar Noon transition periods and then returned home to monitor the mid-afternoon and Full Moon Transition periods in my garden.

I arrived at Newstead just after 10am and on my way in noted that there were tight vertical cylinders around all the trees. The energies felt “focussed” The Dragon lines were not tight or constrained in any way, the lines between the trees were stable and switched off and the Blind Springs were pulsating as normal.

The Beacon Tree in the car park is connected to the Beacon Well behind the house by a large vertical circle with arcs above and below ground. The direction of rotation of this circle appears to change every 6 minutes or so. There are similar but smaller energetic circles connecting other trees with small Blind Springs and they also change their direction of flow every 6 minutes or so.

The weaving of the esoteric colours of the Sun etc into energy lines and grids by a lone Elemental Being is taking place beneath the mound on which Annesley Old church stands

11:29 – 11:33 (approx. 1.5 hours before Solar Noon and 4 hours before Full Moon)

The Pentagon Tree Deva’s energy field is circular and extends for 3 foot-to-foot paces (0.75m) away from the trunk at ground level and rising up vertically.

Grandfather Oak’s cylinder is further away from the trunk, around 6 foot-to-foot paces (1.5m) away from the trunk at ground level and rising up vertically.

Solar Noon observations at Newstead 12:00 to 13:15pm on day of Full Moon

12:03 (approx. 1 hour before Solar Noon and 3.5 hours before Full Moon)

Observing by the distance eye dowsing method sitting in a Capped Vortex in the shade of a Linden tree in sight of the Pentagon Tree Deva, the high energy field of the twisted chestnut Tree Dev across the Lake (but not the physical tree), Grandfather Oak and the Beacon Tree. Weather 25 degrees, breezy, partly cloudy.

The atmosphere feels quiet and peaceful with focussed tree energy in the cylinders.

The Capped Vortex has a radius of 30cm with male/positive energy rising & female/negative energy descending but neither expanding outwards nor contracting inwards.

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

12:08 – 12:11 (approx. 1 hour before Solar Noon and 3.5 hours before Full Moon)

The esoteric colour predominant in sunlight is currently just over the mid-point of blue moving gradually towards green.

The Beacon Tree dowses as Green & its Beacon Well as Ultraviolet & 18,000ub

Grandfather Oak dowses as Green & its Beacon Spring as Indigo & 9,500ub

The Pentagonagram Tree Deva Oak dowses as Green & its Beacon Spring as Indigo & 9,500ub

The atmosphere felt so quiet and peaceful with no energetic disturbances and underground water normal.

12:15 (56 minutes before Solar Noon)

Weavers at Annesley Old Church weaving mound (performs a similar function to Silbury Hill) are starting to pack up ready for a summer afternoon nap ([does this revitalise their metabolisms?](#))

12:16 – 12:22 (55 to 49 minutes before Solar Noon)

I feel a little dizzy and the tops of my head feels off kilter. The Energy Lines seem to be wobbling.

12:23 – 12:24 (48 to 47 minutes before Solar Noon)

A male Druid type luminous Being at the Annesley Old Church mound rose upwards from the Blind Spring in the far NE corner. He was awaiting a female counterpart who was gliding towards him across the countryside from the SE ([possibly along an energy dragon line or Ley](#)).

12:25 – 12:28 (46 to 43 minutes before Solar Noon)

The lady that Tammy saw in the building above the café in April seems to be getting ready for something, dressing and brushing her hair. [\[There is a female energy line flowing through the café so she may be the lady of this line like the Silver lady at Felley Priory that Mave, Maria and Anne tuned into, or the Lady of the Well\]](#) She starts to glide slowly and gently from the house to the Beacon Tree below ground. She then emerges in the cylinder around the Beacon Tree [\[travelling along the connecting energy\]](#) making herself tall and thin and reaching upwards. The lady gradually begins to fill the entire Beacon Tree with her arms rising outwards in great arcs

12:29 (42 minutes before Solar Noon)

The Newstead etheric lady is now sinking back underground now

12:30 – 12:31 (41 to 40 minutes before Solar Noon)

The Female Luminous Being has now reached Annesley Old Church weaving mound and the Male Druid-type Luminous Being is holding out his hand for her (Yin & Yang), They both glide towards the Copper Beech Tree Deva near the east end of the ruined church. They then started activating switches inside the mound while the weaving being

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

naps. *[This is similar to the sequence of events observed at Silbury Hill near Avebury in June 2025 around 40 to 36 minutes before Solar Noon, However, today the Solar Noon transition period starts 10 minutes earlier than usual, probably due to it being the one immediately prior to the Full Moon lunar transition period, so the relative timings are more or less the same]*

All quiet at Newstead

12:32 (39 minutes before Solar Noon)

There is a feeling of getting readiness in the waters at Newstead now. The water seems to be moving faster and pulsating.

12:33 (38 minutes before Solar Noon)

The Capped Vortex that I am sitting in has widened out from 30cm to 45cm in diameter and feels hot. It is still a vertical cylinder.

12:34 (37 minutes before Solar Noon)

The tree cylinders are pulsating and seem to have widened out about 50% like the one around the Capped Vortex that I am sitting in

The Beacon Tree to Grandfather Oak line is lighting up and being switched on with spirals around it in both directions

12:35 (36 minutes before Solar Noon)

The Grandfather Oak to Pentagon Tree Deva line is also live now.

The lines connecting into the Sherwood Forest Pentagon are now booting up.

12:36 (35 minutes before Solar Noon)

All Tree lines active now.

Cylinders around trees pulsating.

The Grandfather Oak to its Blind Spring circle is from the spring to the tree above ground and from the tree to the spring below ground (counterclockwise).

The Pentagon Tree to its Blind Spring circle is the opposite - from the spring to the tree below ground and from the tree to the spring above ground (clockwise).

12:37 (34 minutes before Solar Noon)

The huge vertical circle connecting the Beacon Tree and the Beacon Well has gone.

12:38 (33 minutes before Solar Noon)

The huge vertical circle connecting the Beacon Tree and the Beacon Well has returned and has reversed direction - from the Well to the Beacon Tree above ground and from the Beacon Tree to the Well below ground now (clockwise). The lines are not so high above the ground and low beneath the earth now. They have become a flattened ellipse rather than a circle.

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

12:39 (32 minutes before Solar Noon)

The Beacon Tree – Beacon Well connection at Newstead has reversed direction again.

At the Annesley Old Church weaving mound the Yin and Yang Luminous Beings are holding hands around the Copper Beech Tree Deva.

At Newstead the etheric lady from the house who immersed herself in the Beacon Tree earlier has been joined by a Male Luminous Being from the ancient site beneath and beyond the private buildings on the NE banks of the lake, [\[marked as “Abbey Maintenance Services” on google maps and where Peter Drummond and Anne Pogson both located a very ancient site\]](#). Like with the Luminous Beings at Annesley Old church these appear to be more human forms that have become Shining Ones rather than Elementals.

12:40 (31 minutes before Solar Noon)

The energetic sphere within the Beacon Tree is getting powered up and slowly rising upwards.

12:41 (30 minutes before Solar Noon)

The sphere rises above the Beacon Tree and starts spinning anticlockwise which turns it into a donut shaped toroid. It seems to be communicating with the two Tree Devas and also more distant Beacon Trees including the Pilgrim Oak and the Holm Oak Beacon tree near the ruined tower of Annesley Old Church. Maria had the intuition that this was a form of roll call where the Beacon Trees were checking that the other trees were present and fully functioning.

This is 10 minutes earlier than usual – possibly due to it being Full Moon

12:42 (29 minutes before Solar Noon)

The diameter of the Capped Vortex that I am sitting in is now 60cm – twice as wide as it was at 12:03 when I first sat down to observe

The tree cylinders have widened out, too. Now also about double the width from a couple of hours ago.

12:43 (28 minutes before Solar Noon)

Big pulse in the tree cylinders. Seems like they are spinning their chakras as normally happens at this stage in a Solar Transition period

12:44 (27 minutes before Solar Noon)

The Capped Vortex that I am sitting in is also spinning its chakras.

I can feel the energy at my crown, then it drops to my sacral chakra.

12:45 (26 minutes before Solar Noon)

The energy has risen to my Brow chakra then drops to my Solar Plexus then rises to my throat. They are spinning in opposite directions

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

Big pulses from the Tree Deva but smaller ones from the other trees

12:46 (25 minutes before Solar Noon)

The energy is settled at my Heart centre now and I feel really peaceful just like when I do heart coherence. I feel happy.

12:47 (24 minutes before Solar Noon)

Energy Lines pulsating now, expanding and contracting by colour frequency band as they normally do at this stage in a Solar Transition period.

The underground water seems to be “plopping”

12:48 (23 minutes before Solar Noon)

The lines from the pentagram tree to the four other tips of the Sherwood Forest pentagram are expanding and contracting like the Energy Lines but are not transmitting any energy into the pentagram yet

12:49 (22 minutes before Solar Noon)

Everything seems to be quietening down now as if readying for another phase.

The Oak Pentagram Tree Deva is pulsing energy upwards

12:50 (21 minutes before Solar Noon)

The Oak Pentagram Tree Deva is still pulsing energy upwards

12:51 (20 minutes before Solar Noon)

The Oak Pentagram Tree Deva is still pulsing energy downwards [*similar to Sue Morter's central channel breath that I observed in my garden 14 minutes before the end of the First Quarter Lunar Transition period on 21/7/26*]

12:52 (19 minutes before Solar Noon)

Big pulse into the sky now from the Oak Pentagram Tree Deva

The only other tree doing this is the twisted chestnut Tree Deva across the lake.

The energy comes back down the Tree Devas now as if it is being built up

12:53 (18 minutes before Solar Noon)

The predominant esoteric colour in Sunlight is now Green

The Tree Devas are manufacturing Spiritual Gold energy which is utilised off planet

The Beacon Tree energy has gone underground

12:54 (17 minutes before Solar Noon)

The Oak Pentagram Tree Deva energy is now below ground again

No energy being transmitted along the Sherwood pentagram lines yet

12:56 (15 minutes before Solar Noon)

Energy bounces up again in a big burst

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

12:57 (14 minutes before Solar Noon)

The Tree Deva seems to have finished now

The Pentagon Lines radiating from the Oak Pentagon Tree Deva are now becoming energised towards the other 4 pentagram tips.

13:00 (11 minutes before Solar Noon)

Energy is being pulsed into the pentagram lines

The Pilgrim Oak Beacon Tree is in communication with the Car Park Beacon Tree

13:01 (10 minutes before Solar Noon)

Cylinders still around all tree trunks

13:02 (9 minutes before Solar Noon)

Energy still pulsating into the pentagram lines

The male & female Luminous Beings are dancing around the Pentagon Tree now

13:03 (8 minutes before Solar Noon)

Beacon Tree quiet

Energy lines still present but weaker

13:04 (7 minutes before Solar Noon)

The Capped Vortex that I am sitting in has reverted to 30cm diameter now and the cylinders around the trees seem to have got tighter

13:05 (6 minutes before Solar Noon)

The pentagram tree has stopped sending energy into the pentagram lines now

13:06 (5 minutes before Solar Noon)

The Capped Vortex that I am sitting in is still there but only 3,500ub now

13:06 (5 minutes before Solar Noon)

The Capped Vortex that I am sitting in is still there but only 3,500ub now

13:07 (4 minutes before Solar Noon)

The Capped Vortex that I am sitting in has gone now and so have the Energy Lines, but the vertical cylinders are still present around the trees

13:09 (2 minutes before Solar Noon)

The Capped Vortex that I am sitting in and the Energy Lines are still gone and the vertical cylinders are still present around the trees

13:10 (1 minutes before Solar Noon)

The Capped Vortex and Energy Lines have returned

The sphere rises up in the Beacon Tree becoming a donut shaped torus to signal the end of the transition period

12:11 SOLAR NOON

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

Mave's Garden at the Full Moon 29/7/26

Solar Noon at home 13:11, Full Moon 15:36 (same as at Newstead)

Mid-afternoon Transition Period should have been between 15:00 and 15:15 but didn't take place today, presumably because a lunar transition period began at 15:05.

Full Moon Lunar Transition Period should have been from 15:16 to 15:36 but started 10 minutes early and lasted 30 minutes like the Solar Noon one did today.

Sitting in Capped Vortex in bay window and observing Poplar Tree Deva in garden, plum tree in garden, 4-foot-high tree stump & two multi-trunked sycamores on grass verge.

Beacon Tree energies in Living Room behind me.

Tight vertical Full Moon cylinders around tree trunks, Capped Vortices and Beacon Tree energies.

Observations from 14:58 to 15:36

14:58 (2 minutes before mid-afternoon transition period)

Predominant esoteric colour in sunlight is ORANGE

Full Moon cylinders are tightly wrapped around trunks of all trees in my vision

Bay Window Capped Vortex has cylinder 30cm in diameter with positive spiral going vertically up, negative spiral going down but no sideways expansion or contraction

14:59 (1 minute before mid-afternoon transition period was due)

Horizontal line between poplar and plum tree at 1 metre above ground is present

Horizontal line between poplar and tree stump at 1 metre above ground is present

15:00 (should have been the start of mid-afternoon transition period)

Feeling hot sitting in the Bay window Capped Vortex, more so than the surrounding air

15:01 (1 minute after what should have been start of mid-afternoon transition period)

Bay window Capped Vortex and lines between trees still present

15:02 (2 minutes after what should have been start of mid-afternoon transition period)

Bay window Capped Vortex expanded from 30cm to 45cm diameter

Cylinders around trees also expanded by around 50%

[same happened at Newstead during Solar Noon transition period]

No change in polarity

15:03 (3 minutes after what should have been start of mid-afternoon transition period)

Bay window Capped Vortex and lines between trees still present

15:04 (4 minutes after what should have been start of mid-afternoon transition period)

Beacon Tree energies in Living Room seem to be preparing the sphere to send it up for the start of the Lunar Transition period.

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

[10 minutes earlier than expected just like at Solar Noon today. This will be why there is no mid-afternoon transition period today, the timings clash]

15:05 (Start of Full Moon Lunar transition period)

Beacon Tree energies in Living Room send up sphere of energy above the house that starts spinning anti-clockwise and turns into a communicating donut-shaped torus. Poplar Tree Deva seems to be communicating with other Tree Devas

15:07 (29 minutes before Full Moon)

Polar Tree Deva is rapidly sending its energy up to top of its energy field (7 tree heights) then down below to the bottom of its energy field (5 tree heights)

15:08 (28 minutes before Full Moon)

Bay Window Capped Vortex has now expanded from 45cm diameter to 60cm diameter
Polar Tree Deva energies are now way down underground
Energy lines between trees still present

15:09 (27 minutes before Full Moon)

Polar Tree Deva energies are now at the top of the physical tree and seemed to be stuck there for a short while, now trickling back down

[This reminds me of Dr Sue Morter's central channel breathing technique]

15:10 (26 minutes before Full Moon)

Bay Window Capped Vortex is vibrating and feels hot inside

15:11 (25 minutes before Full Moon)

The polarities have reversed in the Bay Window Capped Vortex

15:13 (23 minutes before Full Moon)

The energy shot to the top of the Poplar Tree Deva, then back down very quickly
It seems to be spinning its chakras by colour frequency like the Capped Vortices do

15:14 (22 minutes before Full Moon)

Bay Window Capped Vortex is spinning my chakras

15:15 (22 minutes before Full Moon)

Suddenly felt very peaceful with my energies centred at my heart.
Feels like I have gone into heart coherence and the trees have too

15:16 (20 minutes before Full Moon)

Struggling to think straight and carry on observing

15:17 (19 minutes before Full Moon)

Poplar Tree Deva energies are underground now
Feel like I am also being pulled underground so Capped Vortex energies must be doing same as trees

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

15:18 (18 minutes before Full Moon)

Feeling OK now

Bay Window Capped Vortex diameter has expanded again from 60cm to 70cm

Tree cylinders have also widened by the same proportion

15:19 (17 minutes before Full Moon)

The energy is pumping up and down in all the trees and in the Bay Window Capped Vortex. This isn't chakra spinning now. It is [preparing to release energy into the Biosphere.](#)

15:21 (15 minutes before Full Moon)

The energy is pumping up the Poplar Deva tree under pressure and took 6 pumps to reach the top of the physical tree

15:23 (13 minutes before Full Moon)

My head feels muddled now

The energies up to 4 or 5 feet around the base of the Poplar Tree Deva trunk feel a bit chaotic now.

15:24 (12 minutes before Full Moon)

The golden energies of the Poplar Tree Deva are spinning anticlockwise now and spiralling UP the tree.

15:25 (11 minutes before Full Moon)

The golden energies of the Poplar Tree Deva are still spinning anticlockwise and spiralling DOWN the tree now.

I feel dizzy and it is hard to concentrate so something similar must be happening in the Bay Window Capped Vortex that I am sitting in.

15:26 (10 minutes before Full Moon)

The Poplar Tree Deva is manufacturing SPIRITUAL GOLD energy

The torus around the Blind Spring on the lawn is almost flat to the ground

15:27 (9 minutes before Full Moon)

I still feel dizzy in the Bay Window Capped Vortex,

The water beneath me is being sucked down

The Elementals and Weaving Beings are very busy, not sleeping

15:28 (8 minutes before Full Moon)

I feel dizzy muddled and can't concentrate

15:29 (7 minutes before Full Moon)

The SPIRITUAL GOLD energy in the Poplar Tree Deva is now being released upwards

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

15:30 (6 minutes before Full Moon)

Poplar Tree Deva is now sending energy very deep into the ground.

A portal seems to have opened up at the base of the Poplar Tree Deva

15:32 (4 minutes before Full Moon)

An elemental being is in the portal at the base of the Poplar Tree Deva's trunk

15:34 (4 minutes before Full Moon)

The Bay Window Capped Vortex is pulsating in and out

The Capped Vortices and lines between the trees suddenly disappear

The cylinders around the trees have disappeared, too but no energy field is around their canopies which I would expect if the cylinders had dissolved

15:36 FULL MOON

The energies all came back rapidly with polarities reversed back to normal

Beacon Tree energies sent up sphere again to become communicating donut-shaped torus

SESSION 7 NEW & FULL MOON ENERGIES - RESULTS

Dr Sue Morter's Central Channel Breathing technique

Dr. Sue Morter is an expert in the field of energy medicine who has developed a unique approach to achieving spiritual alignment through central channel breathing. This technique focuses on the power of breath to awaken and strengthen the body's natural energy pathways. According to Dr. Sue Morter, the central channel is a core energy pathway that runs through the centre of the body, existing even before the nervous system takes form in the womb. This channel plays a vital role in the regulation of energy flow within the body.

CENTRAL CHANNEL BREATH

DR. SUE MORTER

Breathe as if you are moving energy through your body, guided by the breath. Breathe from deep in the abdomen, extending it on the inhale and compressing it for the exhale. Breathe with your concentration from over the top of the head, down through a central channel of the body, to beneath the tip of the spine and into the earth.

The concentration must follow through each energy center in the core of the body without skipping any portion.

Inhale to the heart/core/abdomen and exhale to above or below the head or tip of the spine. Next, inhale from the same direction the previous exhale ended. This connects the energies resonating higher than the physical realm with the supportive energies from within the body and with earth itself, providing a channel, a bridge, for deeper integration of all of our resources.

More fierce versions of this breath serve to pierce through dense tissues with energy flow to create an opening of the system. Whereas slow deep intentional versions of the same breath will serve to integrate the subtle energies and relax an individual when under stress or with prolonged periods of mental concentration. The most important aspect is that you follow the breath with conscious concentration all the way up and down the system. * Again, integration happens with a slow and conscious breath.

MORTER INSTITUTE | 10439 COMMERCE DRIVE, SUITE 140 | CARMEL, IN 46032 | 855-872-8700 | DRSUEMORTER.COM

To practice Central Channel Breathing, one begins by sitting in a comfortable, upright position, with a relaxed yet alert posture. Focusing on the breath, the individual is guided to breathe through the nose, imagining the breath beginning about two inches above the head, and consciously directing it to flow through the centre of the brain, throat, heart, and belly, before exhaling and grounding the breath into the earth. As you breathe in, allow your belly to expand, and as you exhale, direct the breath down through the central channel and into the earth source. Some practitioners might incorporate the use of anchor points during Central Channel Breathing. This involves squeezing specific points in the body at the perineum, shoulder blades, throat and forehead, as one breathes, in order to deepen their focus and enhance the energy flow source.

[Central Channel Breathing: Effortless Technique for Enhanced Well-being – The Functional Medicine Website](#)
