

SESSION 1 TREE ENERGIES - RESULTS

This document details the results of Session One of the Newstead Dowsing Research Project that took place in April 2026. The session focussed on the energies of trees. The main highlights are summarised on pages 4 and 5. This is followed by a detailed analysis of the findings. The Appendices contain the data sheets submitted by individual Dowsters.

SESSION 1 TREE ENERGIES - RESULTS

OVERVIEW OF PROJECT

Aim of the Project

The aim of this dowsing research project is to explore different aspects of tree, water, and earth energies and to investigate how the different aspects are interconnected, as well as how they are affected by sound-based stimuli, crystals, the Solar Noon transition period (the 20-minute period leading up to Solar Noon), the mid-afternoon transition period (3pm to 3:15pm), the periods surrounding New & Full Moon and the periods surrounding the Equinoxes and Solstices.

A team of Dowsters led by Mave Calvert is working on the ground in the parkland surrounding Newstead Abbey in Nottinghamshire. Other individuals and groups are carrying out parallel research in other locations.

One of the aims of this research project is to investigate Mave Calvert's ideas about these energies and try to prove, disprove and/or revise some of these ideas and hopefully find other interesting things as well.

The project documentation can be found on Mave's dowsingsherwood.com website:

[Research Project \(List\) | The Sherwood Dowser](#)

As well as the Project Summary and details of each individual themed session, there is a document containing the pendulum dowsing charts, a document containing information about the location, geology and a brief history of the Newstead area, and documents giving opportunities for dowsters to do some remote/map dowsing and monitor some energies in their own home and garden.

Session 1 – Tree Energies

The first of 8 project sessions took place in April 2026 and focussed on the energies of trees, the straight lines of energy that connect them to other trees and the Capped Vortices on open ground where trees once stood. The participating Dowsters were:

NEWSTEAD TEAM 11/4/2026

Mave Calvert, Peter Butler, Diane Ellerton, Maria Hale, Tammy Parker, Kate Richardson, Richard Spencer, Sian Wilson

DOWSTERS WORKING ELSEWHERE

Ali Denham in Alvington Woods, Kingsbridge Devon, 18/3/26. 20/3/26 & 4/4/26

Helen Parry in Essex 11/4/26

Sara Bassett in Reigate Priory Park, Surrey 11/4/26

Chris Tonge in Darwen Lancashire 11/4/26

SESSION 1 TREE ENERGIES - RESULTS

SUMMARY

✦ The tree energy fields all responded to sound-based stimuli with the most rapid increase in the size of the energy field taking place when a several people stood below a tree chanting AUM. Chanting below two trees simultaneously caused the energy fields to expand and overlap creating a healing space in the centre.

✦ Stimulating the energy field of a tree with sound caused the energy lines connected to the tree to be stimulated and also the energy field of the tree at the other end of the connecting energy line.

✦ When dowsing the energy fields of trees different Dowzers in the same group were getting different results regarding the colour frequencies, Bovis and % of Yin/Yang energy and the results also differed depending on how close to the tree trunk the Dowser was standing. After asking several yes/no questions to try and find out what was happening, we concluded that Trees were interacting with each Dowser differently and simultaneously communicating whatever vibrational colour frequencies were appropriate for each individual person for healing (cleansing, re-balancing and energising) purposes.

✦ The Dowsing confirmed that some trees stand in Capped Vortices created by underground water, as Mave's research suggests. It also showed that other trees either stand in different energy features or create their own Vortices.

✦ In some areas there are a proliferation of Capped Vortices on open ground in whose energy field a tree once stood. In other areas there are very few. This may be related to the geology. At Newstead and the area surrounding Mave's home where she carried out most of her research, there are numerous Capped Vortices, and the geology is magnesian limestone with a large aquifer below.

✦ When stepping into the Capped Vortices on open ground the people who dowsed that it was beneficial for them to do so reported things like feeling cocooned, peaceful, warm, muscles relaxed, in a cone, swooney, peaceful, wind noise dropped. This confirms Mave's research that these Vortices are conscious and interact with a person who steps into them.

✦ Many of the lines connecting trees do run at one metre above ground level as Mave's research has shown. However, some lines can be found at a slightly lower height. It was found that some of these lines that dowse as Yin are easier for female dowzers to detect and some that dowse as Yang are easier for male dowzers to detect.

✦ Dowzers working in different locations found that there are different energy lines that connect with trees at root/ground level and also ones that connect at around 5 to 6 feet above ground.

SESSION 1 TREE ENERGIES - RESULTS

✦ The Dowsing confirmed Mave's research showing that trees and the energy lines connecting them go through a transition period in the 20 minutes leading up to Solar Noon, during which time the energies change rapidly reversing polarity, spinning, transmuting non beneficial energy, and then weakening and disappearing underground towards the end of the period.

✦ The Dowsing also confirmed Mave's research showing that the energy lines connecting trees and the Capped Vortices where trees once stood go through another transition period in the mid-afternoon between 3pm and 3:15pm when they weaken considerably and disappear underground.

✦ In conclusion, it seems that the energy fields of Trees, irrespective of whether the physical tree is still there, appear to be conscious, constantly in motion and interacting with and responding to their environments including each of the individual Dowzers. They are able to communicate whatever vibrations and colour frequencies are appropriate to help their environment to remain in balance and harmony including the human beings in that environment. Changes occur naturally during the Solar and Mid-afternoon transition periods which also help to keep the surrounding environment in balance and harmony and also cleansed through the transmutation of non beneficial energy. Because of this constant motion and interaction, it is difficult to produce a reliable set of baseline readings since everything is in constant flux and can differ from moment to moment. However, the fact that this constant motion and interaction takes place shows that the behaviour of trees displays a higher degree of intelligence/consciousness than the experiments that can be devised to observe them can do justice to.

SESSION 1 TREE ENERGIES - RESULTS

DETAILED FINDINGS

Part 1 - Tree Energies

NEWSTEAD

Maria dowsed that the Oak Tree alone emitted an energy field with a radius of 1.77m. The Vortex that the Oak tree was standing in emitted an energy field of 1.63m. The combined energy field of the Tree and Vortex dowsed as 2.4m. This appears to validate Maves' research that shows some trees stand in energy Vortices which enhance their own energy fields.

The energy field of the Oak Tree and a Hazel tree that were connected to by an energy line 41 yard long both dowsed at radius 3.5 yards and circular before we started our experiments. Both were dowsed independently.

Diane observed that the aura of the Oak Tree surrounded the entire tree forming the same shape as the tree. The flags marked what was dowsed at ground level which was effectively the aura of the trunk.

The Oak Tree dowsed as having many colours within its aura. The nearer the Dowzers stood to the tree trunk the more colours were found. Different dowzers dowsed different colours and colour frequencies using Maria Wheatley's High Frequency Colour Dowsing chart from Chapter 8 of her "Divining Ancient Sites" book. It was thought that the Oak Tree was using colours to communicate with the group and to give individuals whatever colour energies were appropriate for them each as individuals. Contemplating this afterwards and discussing with an friend, Sian suggested we may have been dowsing in different bands within the tree's aura which had differing frequencies.

Singing and Crystal Experiments:

It was observed that a Swan flew in and landed nearby while the sound stimuli experiments were taking place.

When a large rose quartz crystal was placed below the Oak Tree the aura expanded to 8 Mave paces. It made no difference whether the Crystal was placed on the ground or held by Peter and Sian.

The Oak Tree aura initially dowsed as 7 Mave paces. When Kate sang a tree blessing song beneath it the size of the aura doubled to 14 Mave paces.

Peter reported being pushed backwards towards the Hornbeam Tree when singing bowls were played in addition to Kate's singing. At the same time Mave reported the aura of the Oak Tree expanded another 9 Mave paces to 23 in total, but it seemed to be slower to respond than with Kate singing on her own.

SESSION 1 TREE ENERGIES - RESULTS

When a group chanted AUM beneath the Oak Tree the energies expanded extremely rapidly (approx. fourfold) and Mave was running backwards to keep up with them, eventually stopping at 38 Mave paces from the tree trunk,

When the group chanted AUM beneath the Hornbeam tree that the Oak Tree was connected to by a Yin energy line, the energies expanded extremely rapidly (approx. fourfold) and Mave was again running backwards to keep up with them. They stopped when they reached the trunk of another Hornbeam tree.

This prompted us to have 3 people chant AUM below one Hornbeam tree and 4 people to chant AUM below the other Hornbeam tree simultaneously with one of the two men in each group. Mave stood equidistant between the two trees. The energy fields of the trees both expanded in a circular pattern forming a vesica piscis that Mave was at the centre of. Mave felt a powerful healing energy that caused her injured right arm to rise up. The experiment was repeated with the two groups swapping places. The same thing happened but this time Mave observed that the energy in the centre felt more lower frequency and Yang in nature. Once more this suggests that the trees are communicating whatever energy the human beings require to cleanse, re-balance and heal themselves.

The Oak Tree dowsed as having 2% non-beneficial energy in its field when we first arrived. That went up to 30% after the someone had come up to complain about us using dowsing marker flags. Immediately after the Solar Noon transition period there was 0% non-beneficial energy in the Oak Tree's field. This validates Mave's research that shows that the energy fields of Trees and Capped Vortices absorb non-beneficial energy throughout the day which is transmuted during the solar transition periods.

DOWSERS IN OTHER LOCATIONS

Chris Tonge dowsing in Darwen, Lancashire, found a tree that was not standing in a Vortex. However, he could dowse a cylinder of energy around it at about 5-10cm from the trunk which had a clockwise flow within it. He dowsed the aura of the tree at 5m radius which reduced to 3m radius when he asked to be shown the "undisturbed" aura.

Sara Bassett dowsing in Reigate Priory Park, Surrey, also found a tree that wasn't standing in a Vortex but in this case it was creating its own Vortex. She was able to dowse this energy field around the tree and found it to have 6 "spokes" of moving alternate Yin and Yang energy within it. All but one of the layers contained mostly beneficial energy. The layer that surrounded the bump on the trunk had a lower Bovis reading and only 50% beneficial energy.

Ali Denham dowsing in Alvington Woods, Kingsbridge, Devon, found a twisted Lime Tree that was standing in a Vortex and found that the overall size of the Tree and Vortex combined was almost double that of the tree on its own had it not been standing in a

SESSION 1 TREE ENERGIES - RESULTS

Vortex. Again, this appears to validate Maves' research that shows some trees stand in Energy Vortices which enhance their own energy fields.

These findings also show that not all trees stand in the Vortices created by the upwards movement of underground water that Mave refers to as Capped and Infinite Vortices. Some Trees stand in different types of energy feature, all of which Chris Tonge feels are projected upwards from underground in one way or another. It appears that those trees that don't stand in a pre-existing Vortex are able to create their own. It is possible that the underground geology, which affects the way that water moves underground, may affect the number and type of Vortices and associated energy fields that are found around trees.

Helen Perry, dowsing in Essex, measured the energy field of a Cherry and a Maple Tree at 3 different times of the day and found the size different each time, with the widest reading taken during the afternoon/evening.

Everyone who did the sound stimuli experiments found the Trees' energy fields responded to various sound stimulus. Sara Bassett found that playing Gayatri Mantra, chanting and using a singing bowl doubled the size of the tree's energy field from 22m to 44m whilst playing Motorhead caused the aura to contract. Ali Denham found that as well as increasing the size of the energy field from 20 paces to 25 paces, the ringing of Tingsha Bells also increased the proportion of beneficial energy in the tree's energy field and changed the colour.

SESSION 1 TREE ENERGIES - RESULTS

Part 2 - Tree Lines

NEWSTEAD

Peter picked up a Yang line from the Oak to a Hazel tree 41 paces (approx. 1 yard) away and Diane picked up a Yin line from the Oak to a nearby Hornbeam tree around half that distance away at almost at the same trajectory. The lines were very close and overlapped. It seems it is easier for women to pick up the Yin lines and men the Yang ones.

The Yang line connecting Oak and Hazel was 100cm above ground at its core but the core of the overlapping Yin line connecting the Oak and Hornbeam was lower at 76cm.

The Yang line that Richard and Peter dowsed connecting the Oak and Hazel trees was 54 inches wide. The Yin line that Diane and Maria dowsed connecting the Oak and Hornbeam was 60cm wide.

Three different colours were dowsed within the Yin line, and it dowsed as being beneficial to people.

The Bovis of the Yin line dowsed as about three times as high outside of the two tree auras.

Kate and Tammy dowsed a line emanating from the Oak Tree to another tree (possibly a Sycamore) further down the hill. The line dowsed as 1.7m wide, widening out to 2.3m near the Sycamore. The core of the line was 74cm above ground level.

This confirms Mave's findings that energy lines often connect trees at around one metre above ground level at their core. However, it was noted that not all of these tree lines remain at 100cm above the ground when they are away from the tree trunk and they don't always remain at a constant width. It also shows that some of the lines dowse as Yin and others as Yang.

DOWSERS IN OTHER LOCATIONS

Chris Tonge found the lines connecting the trees that he dowsed were roughly 100cm or 1 metre above the ground and 10cm in diameter.

Sara Bassett, who was dowsing a tree that didn't stand in a pre-existing Vortex but created its own, dowsed energy lines connected to the tree at root/ground level and through each band on a vibrational level. The width of these energy lines averaged 9m and the root connection showed through to 11m below ground. The Bovis dowsed as 19,000ub and they contained 100% beneficial energy.

Informational dowsing suggested these root/ground level lines are affected by the Moon and changes its direction of flow at Dusk.

Sara dowsed 6 energy lines in the Vortex of the tree from 14 in total.

SESSION 1 TREE ENERGIES - RESULTS

Sara found the energy lines to expand when she interacted with them, and also when she stimulated them by sound and crystals. She used Gayatri Mantra, Chanting, a singing bowl and several different crystals including an amethyst cluster, plus stones from Petra and Kilmartin. Placed at the base of the tree trunk, the crystals caused the tree's aura to expand to 47m whereas the sound caused an expansion to 44m. Playing inharmonious music caused a contraction to 22m.

Ali Denham found energy lines connecting trees that were around her head height. (Ali's height is 5' 8")

SESSION 1 TREE ENERGIES - RESULTS

Part 3 - Solar Noon Transition Period

Mave Calvert has found that during 20 the minutes leading up to the exact time Solar Noon, the energies lines and vortices associated with trees go through a transition phase where they reverse polarity, move very quickly, disappear underground for 3 minutes and then return to normal. The net effect is that they have transmuted any non-beneficial energy that they were holding prior to the transition period.

NEWSTEAD

At Newstead, we started monitoring the energies of an Oak tree and the lines connected to it at approximately 10 minutes before the start of the Solar Noon transition period. The time of Solar Noon was 13:05 at Newstead on 11th April 2026 and the transition period started at 12:45.

Richard found that the energies started preparing themselves around 5 minutes before the transition period started by drawing themselves in and resetting. We had previously been stimulating them with sound and crystals.

The energy lines connecting the trees immediately weakened and reduced in width. Richard recorded one line reducing from 54" wide to 30".

Following this there was a polarity reversal with the Yin line between the trees starting to dowse as Yang and the Yang line starting to dowse as Yin, accompanied by a change in the direction of energy flow

Straight after the polarity reversal, Richard noticed the tree energies started to spin very rapidly.

After narrowing considerably and weakening, the field surrounding the energy lines connecting the various trees collapsed, and dowsed as having retreated underground. Richard dowsed the energies at around 6m below ground and sensed a loop below ground connecting the trees.

A few minutes after the line had disappeared, the tree energies disappeared as well.

When the lines returned the polarities were still reversed but flipped back to normal just before Solar Noon.

Kate & Tammy found that the Bovis inside the energy field of the Oak tree was dowsing more or less the same before the Solar Noon transition period as it was afterwards. However, outside the energy field of the Oak tree the Bovis was dowsed by Tammy as being much lower than before Solar Noon whereas Kate dowsed it to be more or less the same.

SESSION 1 TREE ENERGIES - RESULTS

Standing next to the Oak Tree, Kate and Tammy both reported feeling “tingly” during the transition period. Kate reported getting a slight headache whilst Tammy had a psychic experience.

DOWSERS IN OTHER LOCATIONS

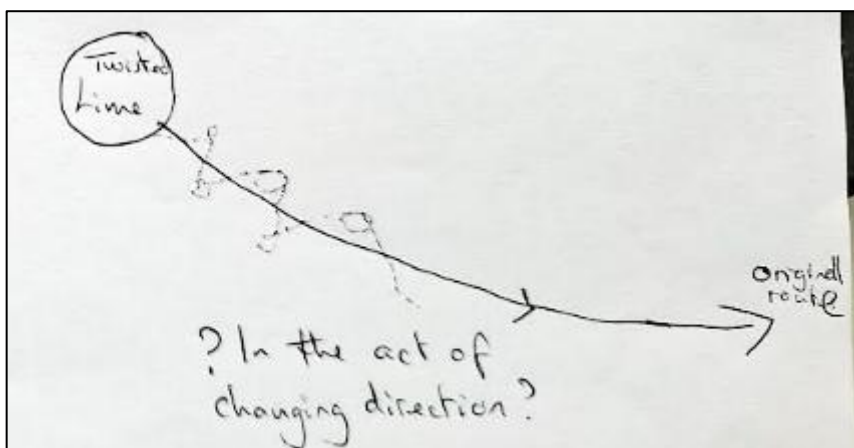

Helen Perry found that the polarity of Vortex of a felled spruce tree had reversed polarity when dowsed during the Solar Transition period

Chris Tonge found that the cylinder of energy around his chosen tree could not be dowsed during the Solar Transition period but reappeared at Solar Noon. The tree dowsed at 20K Bovis and this did not change during the Solar Noon Transition period.

Using a bobber and standing on one of the energetic links to other trees with his back towards his chosen tree, Chris was able to detect a clockwise spiral. The spiralling stopped during the 20 minutes prior to Solar Noon and then slowly restarted.

Sara Bassett observed a pulse of instant energy from her chosen tree that radiated outwards a minute before Solar Noon. This pulse travelled down the energy line associated with the tree. Sara noted that the tree was energised in a similar way to the earlier sound stimuli experiments. 3 minutes after Solar Noon she found the energy line was present, stable but more enervated (fatigued.) This is consistent with Mave’s experiments showing that all the energy returns in a big surge one minute prior to Solar Noon.

Ali Denham found a line coming from a twisted Lime tree at a height of approx. 5 feet above the ground. 3 minutes into the Solar Transition period the Bovis of the line had increased dramatically to 130,000ub. At 8 minutes in the energy line was giving a weak response and 7 minutes after Solar Noon it was giving a very weak response and seemed to loop or zig zag between the trees which made her wonder if it was in the act of changing direction (see image).

Ali Denham also dowsed the tree energies during the Solar Noon transition period. She found the Bovis reading had increased to 80,000ub by the tree but was only 3,000ub at the outer edge of the tree’s energy field

SESSION 1 TREE ENERGIES - RESULTS

Part 4 - Capped Vortices

NEWSTEAD

There were a large number of Capped Vortices on open ground between the trees at Newstead where the geology is magnesian limestone above a deep aquifer. Each one of the six participants was led to a different Capped Vortex all within a relatively small area. All dowsed as once having had a tree growing in them.

Most people were allowed to stand in their chosen Vortex. Sian dowsed that it was not beneficial for her to stand in her chosen Vortex as she was reacting to the water beneath. Maria dowsed that she it was not beneficial for her to stand in one Vortex but she could stand in a different one.

When stepping into the Capped Vortices on open ground the people who dowsed that it was beneficial for them to do so reported things like feeling cocooned, peaceful, warm, muscles relaxed, in a cone, swooney, peaceful, wind noise dropped.

DOWSERS IN OTHER LOCATIONS

Chris Tonge found there was only one Capped Vortex where he was dowsing in Darwen, Lancashire but he found other types of Vortices.

Sara Bassett did not find any Capped Vortices near the tree she was dowsing in Reigate Priory Park, Surrey.

Helen Perry found numerous Capped Vortices (spirals) in her garden in Essex. The geology here is chalk overlain by pockets of clay. The geology at Newstead and Mave's home is magnesian limestone overlain by pockets of clay and there are also numerous Capped Vortices. Limestone and Chalk are very similar geologically, so it follows that they both provide the conditions for Capped Vortices to proliferate.

When Helen stepped into the Vortex of a felled tree she commented "A shiver went up my spine standing on the felled tree vortex and tingled for a while afterwards. Curious".

Ali Denham in Alvington Woods, Kingsbridge, Devon, was unable to step into a Capped Vortex due to Bluebells in the area.

SESSION 1 TREE ENERGIES - RESULTS

Part 5 - Mid-Afternoon Transition Period

The Mid-afternoon transition period is the 20 minutes period between 3pm and 3:15pm BST when the Tree energy field, Lines connecting trees and Capped Vortices can no longer be detected and dowsed as having gone underground. This only seems to happen during the half of the year when the British Isles are in British Summer Time (BST+1) and is at the same time irrespective of location.

NEWSTEAD

All the Capped Vortices disappeared shortly after 3pm. The one that had a piece of amethyst in it at the time remained until the amethyst was removed.

Diane felt that the energy had retreated to around 5m underground at her chosen Vortex.

Richard felt that at his chosen Vortex the energy was 50m underground and sensed red magma. At the same Vortex, which dowsed as predominantly male, Sian found that the Bovis initially reduced to around 2000ub but then started fluctuating and came back up for a while.

This suggests there may be two different layers underground that the energy retreats to during this time.

DOWSERS IN OTHER LOCATIONS

Ali Denham found the energy lines connecting the trees either disappeared or gave a weak dowsing response after 3pm.

Sara Bassett dowsed that the tree energy line disappeared during the 3pm to 3:15pm period returning to normal by 4:16pm

Helen Perry dowsed that there was water around 4m below ground level in her chosen location

Mid-afternoon transition. TIME. Start: 2.57 p.m. End: 3.18 p.m.	4" at 2.57 deeper, about 4 inches from tree c. 10" (+ c. 1' over my head)					

3.03pm. Could not find it

Height that the centre of the energy line connects with the tree. 3.18pm. weak response but detectable.

Does it run horizontally at the same consistent height? No No vortex at end - just stopped.

Is the width constant along its flow? No Convulsed ~~the~~ loops 3/4's en route from tree

How high does the line extend? c. 1' over my head.

Does any part of it extend below ground?

How many lines are connected to each tree? 2

Does the line have bands? How many?

Do they encircle the central core or rise vertically?

Is it affected by the moon?

SESSION 1 TREE ENERGIES - RESULTS

Sara Bassett in Reigate Priory Park, Surrey 11/4/26

I was leaning on the oak tree for the solar noon, felt a very clear energy wave flowing out, awesome.

Tree energy v powerful, so glad we all connected. ✨🌳✨

Individual Tree Energy – Oak, Reigate Priory Park, Surrey – Baseline Readings

How wide is the energy field of the tree, and what shape is that field? 22 m

What colour(s) are present in the tree's energy field? Red/Orange

What is the Bovis reading of the tree's energy field? 12K

What percentage of Yin/Feminine and Yang/Masculine energy is present in the tree's energy field?
90% yang / 10% yin

What percentage of beneficial and non-beneficial energy is present in the tree's energy field?
Age related – 7% non beneficial, 93% beneficial

Is the energy field moving or static? Moving

If the field is moving, in which direction does it move? slow sway. Pulse out at noon

Band	Shape	Size	Colour(s)	Bovis	% Yin/Yang	% Beneficial Energy	Direction of Movement
1 base	band	50cm	n/a	15K	Yang 90	93%	Slow waver
2 bump on trunk	"	"		5K	Yin 90	50%	Distortion in field, oval not circular
3 trunk branch				12K	Yang 90	91%	Slow circular rotation?
4 trunk branch				12K	Yin 90	91%	"
5 South facing				13K	Yang 90	92%	
6 upper branches				12	Yin 90	93%	
7 top canopy – leaves in bud				5	Yang 90	92%	
8 Aura				12	50/50	93%	

Extent of the tree's energy field if it were not standing in a vortex: n/a – tree was not in vortex but had its own that it created – 6 spokes – brambly and uneven bracken ground around half so not safe to dowse physically.

Does the tree's energy field expand when the dowser(s) interact with it? Yes, also invited me in.

Effects of Sound

Sound Type	Observed Effect on Energy Field
Harmonious music (e.g. Gayatri Mantra)	Aura expanded to 44m
Inharmonious music (e.g. Motörhead)	Aura contracted to 22m

SESSION 1 TREE ENERGIES - RESULTS

Sound Type	Observed Effect on Energy Field
Chanting	Aura expanded to 44m
Singing bowl	Aura expanded to 44m

Crystal Experiment

Parameter	Response
Type(s) of crystal used	Amythyst cluster (15cm), 2 x stones from Petra & Kilmartin
Position (tree / person / ground)	Placed in nook – base of trunk
Observed effect on energy field	Expanded to 47 m

Part 2 – Energy Lines Connecting Trees

Tree 1 – Location, species, age estimate:

Oak to Beach – 22 m

Height at which the centre of the energy line connects to the tree trunks:

Connect at root / ground level and through each band on vibrational level

Does the line run horizontally at a constant height?

Yes, band levels corresponded

Width of the energy line and whether it is constant: average 9 metre

Vertical extent above ground: see bands above

Any extension below ground? Root connection showed through to 11 m

% Beneficial energy: 100% beneficial energy. Outwards from each tree meeting in the middle.

Central Core of the Line

- Colour(s): na
- Bovis: 19k
- % Yin/Yang: didn't do

Is the energy line affected by the Moon? Y

Does direction of flow change at dawn or dusk? Y

How many energy lines are connected to each tree? 6 in vortex form 14 in total

Energy Lines Connecting Trees – Experiments

Does the energy line expand when the dowser(s) interact with it? Yes

Effects of Sound on the Energy Line – Same as above as I did the experiment on the energy line

Part 3 – Solar Transition Period

Location chosen for observation: 51.2230 – 0.2168 Solar Noon 13.03

SESSION 1 TREE ENERGIES - RESULTS

General observations, feelings, impressions: The oak felt expectant of solar noon when waiting, and enervated. The solar noon transition was early, started at 13.02 and felt like a wave of instant energy rush down through the tree.

Repeated Observations During the Transition Period

Tree – changes noted: Pulse through tree that radiated outwards

Energy line – changes noted pulse travelled down connection

Post-transition baseline readings (13:05): Response: energy line stable but more enervation

Did energy directions reverse during the transition period? None recorded

Similarities with earlier sound or crystal experiments: Yes energised

Part 4 – Capped Vortices and Tree Energies – didn't do, none nearby

Part 5 – Mid-Afternoon Transition Period – 4pm, dowsed after

Feature	Observations During Transition	Returns to Normal?
Tree energy field	disappeared	4.16
Energy line	20 cm	
Capped vortex	n/a	

SESSION 1 TREE ENERGIES - RESULTS

Helen Perry in Essex 11/4/26

Cherry Tree

Energy Aura radiating out from trunk

11.00 hrs – 2.3 m

12:48 hrs – 3.8 m

18.00 hrs – 3.9 m

Felled Spruce

11.04 hrs – Vortex polarity reversal found

Male CCW spiral

Female CW spiral

12.52 hrs – vortex reversed

Male CW spiral

Female CCW spiral

18:36 hrs – vortex reversed

Male CCW spiral

Female CW spiral

Water beneath ground level at approx. 4m

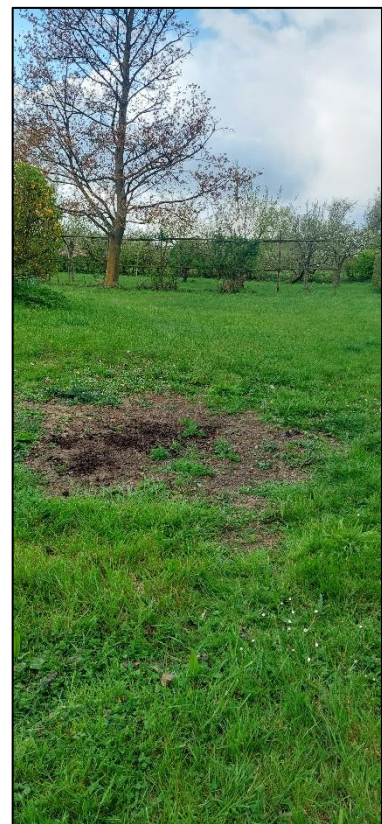

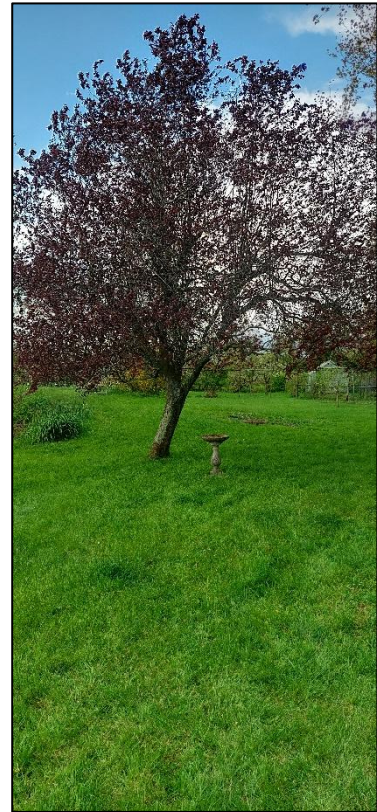

Maple Tree:

Edge of energy aura field radiating from trunk

11.11 hrs – 4 m

13.01 hrs - 5.8 m

18.05 hrs - 5.4 m

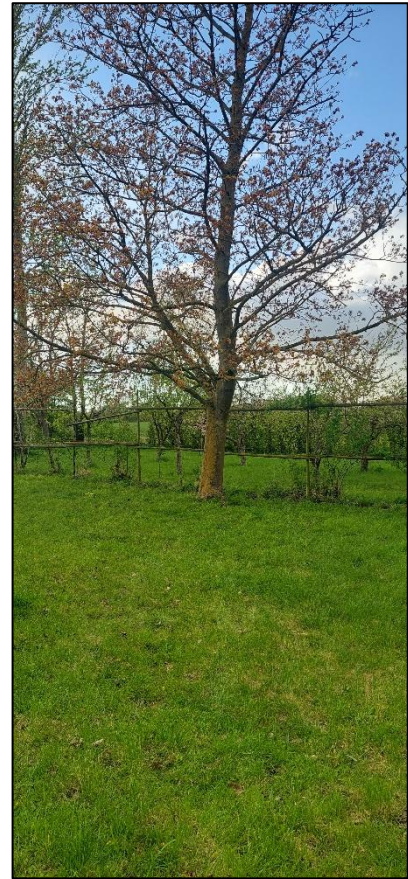

SESSION 1 TREE ENERGIES - RESULTS

NB: Many spirals found on site.

Cherry Tree: two spirals by the cherry tree near to pond. These found by our niece, and first time dowser, who is now an enthusiast. She did a great job. These spirals were separate from one another and located where the tree's energy dipped inward towards its trunk: one female and the other male.

Felled Tree: A shiver went up my spine standing on the felled tree vortex and tingled for a while afterwards. Curious.

SESSION 1 TREE ENERGIES - RESULTS

Chris Tonge in Darwen Lancashire 11/4/26

Over the past couple of weeks I've been exploring my local park and now have plenty of locations that I can dowse. I have three vortices, one of which is a capped vortex. All the vortices have an associated underground element that projects the energy upwards. There are several different dowseable lines and an underground stream. I also have a large sycamore which acts as a beacon tree and has links to eight nearby trees (all within 100 metres).

Today I concentrated on the tree, which I call Powto. The tree is at the node of an earth energy line and a magnetic line and also has a deep underground stream. There isn't a vortex under the tree but it seems to be surrounded by a cylinder of energy that I can dowse 5 – 10cm away from the bark. It has a flow to the left (clockwise looking down). The Bovis energy always dowses as 20k and this didn't change during today's pre-solar noon period (solar noon was at 13:11 here). The energy tube wasn't dowseable for the 20-minute period but returned at 13:11. The aura of the tree dowsed at about 5m diameter but when I asked to see its undisturbed aura it shrank to 3m. I've been talking to and listening to Powto for several years now so I think we have a relationship.

Powto's connections to other trees are about 100cm above the ground and roughly 10cm diameter. I think there may be bands within this 10cm but I haven't dowsed them yet. I've been practising with a home-made bobber recently and have been able to use it dowse rotating flows. Standing on one of the links to other trees with my back towards Powto I was able to detect a clockwise spiral. The spiralling stopped during the 20 minutes prior to solar noon and then slowly restarted. I have still to try the bobber on larger energy lines.

I also checked the nearest vortex to Powto and found that I couldn't detect any rotation during the 20 minute period.

I have been trying to understand the three vortices but need to do more work with them as they are all different.
